Web-Based CheckPoint 156-315.81 Practice Exam Software

Our website is here to lead you toward the way of success in 156-315.81 certification exams and saves you from the unnecessary preparation materials. The latest 156-315.81 dumps torrent are developed to facilitate our candidates and to improve their ability and expertise for the challenge of the actual test. We aimed to help our candidates get success in the 156-315.81 Practice Test with less time and less effort.

Earning the Check Point Certified Security Expert R81 certification is an excellent way for IT professionals to demonstrate their expertise and credibility in the field of network security. Check Point Certified Security Expert R81 certification is recognized globally and is highly valued by employers, making it an excellent career move for security professionals. By passing the 156-315.81 Exam, candidates can prove their proficiency in Check Point technologies and security management, opening up new job opportunities and higher earning potential.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q292-Q297):

NEW QUESTION # 292

In which formats can Threat Emulation forensics reports be viewed in?

- A. PDF, HTML, and XML
- B. PDF and HTML
- C. TXT, XML and CSV
- D. PDF and TXT

Answer: A

Explanation:

The formats in which Threat Emulation forensics reports can be viewed in are PDF, HTML, and XML. Threat Emulation is a feature that detects and prevents zero-day attacks by emulating files in a sandbox environment and analyzing their behavior. Threat Emulation generates forensics reports that provide detailed information about the emulated files, such as verdict, severity, activity summary, screenshots, network activity, registry activity, file activity, and process activity. These reports can be viewed in PDF, HTML, or XML formats from SmartConsole or SmartView.

NEW QUESTION # 293

To fully enable Dynamic Dispatcher with Firewall Priority Queues on a Security Gateway, run the following command in Expert mode then reboot:

- A. fw ctl multik set_mode 9
- B. fw ctl multik set_mode 1
- C. fw ctl Dynamic_Priority_Queue enable
- D. fw ctl Dynamic_Priority_Queue on

Answer: A

Explanation:

Dynamic Dispatcher is a feature that optimizes the performance of Security Gateways with multiple CPU cores by dynamically allocating traffic to different cores based on their load and priority. Firewall Priority Queues is a feature that prioritizes traffic based on its type and importance by assigning it to different queues with different weights and limits. To fully enable Dynamic Dispatcher with Firewall Priority Queues on a Security Gateway, you need to run the following command in Expert mode then reboot:

This command sets the multi-core mode to 9, which means that Dynamic Dispatcher is enabled with Firewall Priority Queues. The other commands are not valid or do not enable both features. References: R81 Performance Tuning Administration Guide

NEW QUESTION # 294

Which of the following cannot be configured in an Access Role Object?

- A. Users
- B. Networks
- C. Time
- D. Machines

Answer: C

Explanation:

Explanation

The verified answer is D. Time.

An Access Role object is a logical representation of a set of users, machines, or networks that can be used in the security policy¹.

An Access Role object can include the following components¹:

Networks: IP addresses or network objects that define the source or destination of the traffic.

Machines: Specific hosts or machine groups that are identified by their MAC addresses or certificates.

Users: Specific users or user groups that are authenticated by one or more identity sources, such as Active Directory, LDAP, or Identity Awareness.

Time is not a component of an Access Role object, and it cannot be configured in it. Time is a separate object type that can be used to define the validity period of a rule or a policy².

NEW QUESTION # 295

The log server sends what to the Correlation Unit?

- A. Logs
- B. CPMI dbsync
- C. Event Policy
- D. Authentication requests

Answer: A

Explanation:

The log server sends logs to the Correlation Unit. The Correlation Unit analyzes the logs and generates events based on the event policy. The events are then sent to the SmartEvent Server, which displays them in the SmartEvent GUI. References: [SmartEvent Administration Guide]

NEW QUESTION # 296

What is required for a certificate-based VPN tunnel between two gateways with separate management systems?

- A. Unique Passwords
- B. Mutually Trusted Certificate Authorities
- C. Shared User Certificates
- D. Shared Secret Passwords

Answer: B

Explanation:

A certificate-based VPN tunnel between two gateways with separate management systems requires mutually trusted certificate authorities. This means that each gateway must have a certificate issued by a certificate authority (CA) that the other gateway trusts. The CA can be either an internal CA or an external CA. The CA issues certificates that contain the public key and identity information of the gateway. The gateway uses its private key to sign and encrypt the VPN traffic. The other gateway can verify the signature and decrypt the traffic using the public key in the certificate. This ensures the authenticity, integrity, and confidentiality of the VPN tunnel.
