Different from traditional learning methods, our Web-Development-Applications exam products adopt the latest technology to improve your learning experience. We hope that all candidates can try our free demo before deciding to buy our Web-Development-Applications study guide. The Q&A contained in the free demo are also compiled by our vetaren professionals who keep close on the changes of the Web-Development-Applications learning dumps according to the real exam. Come and have a try, you will get satisfied with our Web-Development-Applications training engine!

WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details
Topic 1	• Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.

Topic 2	• HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.
Topic 3	• Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.
Topic 4	• Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.

Web-Development-Applications Study Plan & Web-Development-Applications Reliable Learning Materials

The price of our Web-Development-Applications exam materials is quite favourable no matter on which version. As you may find that we have three versions of the Web-Development-Applications study braindumps: PDF, Software and APP online. And if you buy the value pack, you have all of the three versions, the price is quite preferential and you can enjoy all of the study experiences. This means you can study Web-Development-Applications Practice Engine anytime and anyplace for the convenience these three versions bring.

WGU Web Development Applications Sample Questions (Q26-Q31):

NEW QUESTION # 26
Given the following code:
Var a = "true";
What is the data type of d?

- A. Boolean
- B. Object
- C. String
- D. Undefined

Answer: C

Explanation:
The data type of the variableais determined by the value assigned to it. In JavaScript, if a value is enclosed in double or single quotes, it is treated as a string.
* Variable Assignment:
* Given the code:
var a = "true";
* The value"true"is enclosed in double quotes, making it a string.
* Explanation:
* Option A: Boolean is incorrect because the value"true"is a string, not a boolean.
* Option B: String is correct because the value is enclosed in double quotes.
* Option C: Object is incorrect because the value is a primitive string.
* Option D: Undefined is incorrect because the variableais assigned a value.

NEW QUESTION # 27
What should be used to request and Update data in the background?

- **A. AJAX**
- B. Canvas
- C. API
- D. DOM

Answer: A

Explanation:
AJAX (Asynchronous JavaScript and XML) is used to request and update data in the background without reloading the web page.
* AJAX Overview:
* Purpose: Allows web pages to be updated asynchronously by exchanging data with a web server behind the scenes.
* Benefits: Provides a smoother user experience by avoiding full page reloads.
* Example:
* Using XMLHttpRequest:
var xhr = new XMLHttpRequest();
xhr.open("GET", "data.json", true);
xhr.onreadystatechange = function() {
if (xhr.readyState === 4 && xhr.status === 200) {
var data = JSON.parse(xhr.responseText);
console.log(data);
}
};
xhr.send();

NEW QUESTION # 28
Given the following JavaScript code:
What happens when this code is executed?

- A. The object with the id innerHTML is changed to 6.
- B. The object with the id innerHTML is changed to x.
- C. The object with the id demo is changed to x.
- **D. The object with the demo is changed to 6.**

Answer: D

Explanation:
The provided JavaScript code sets a variablexto 6 and then assigns this value to theinnerHTMLof the HTML element with the iddemo.
var x;
x = 6;
document.getElementById("demo").innerHTML = x;
Explanation:
* Variable Declaration:var x;declares the variablex.
* Variable Assignment:x = 6;assigns the value 6 to the variablex.
* DOM Manipulation:document.getElementById("demo").innerHTML = x;finds the element with iddemoand sets itsinnerHTMLto the value ofx, which is 6.
Outcome:
* The content of the HTML element with the iddemowill be changed to6.

NEW QUESTION # 29
Which element relies on the type attribute to specify acceptable values during form entry?

- A. <input>
- B. <Option>
- C. <Select>
- D. <Button>

Answer: A

Explanation:
The<input>element relies on thetypeattribute to specify acceptable values during form entry. Different input types includetext,email,number,password, etc.
* Input Types: Thetypeattribute determines the kind of input control and the acceptable values for that control.
* Usage Example:
<input type="email" placeholder="Enter your email">
<input type="number" min="1" max="10">
These input elements specify acceptable values for email and number inputs respectively.

W3C HTML Specification on Input Types

NEW QUESTION # 30
What does a form field default to if the type attribute is omitted from a form?

- A. Date
- B. Text
- C. Range
- D. number

Answer: B

Explanation:
If the type attribute is omitted from an <input> element, it defaults to text.
* HTML Input Default Type:
* Default Type: The default value for the type attribute in an <input> element is text.
* Example:
* Given the HTML:
<input>
* This will render as a text input field.
* References:
* MDN Web Docs - <input>
* W3Schools - HTML Input Types

NEW QUESTION # 31
......
