Don't worry, Our DumpStillValid NREMT EMT exam dumps is the latest. Free update is for one year.

NREMT Emergency Medical Technicians Exam Sample Questions (Q105-Q110):

NEW QUESTION # 105

A 30-year-old patient is injured in a motor vehicle collision. The patient cannot move their diaphragm, and they are apneic. In which of the following locations should the EMT suspect the spinal injury occurred?

- A. L4
- B. T1
- C. T3
- **D. C4**

Answer: D

Explanation:

The diaphragm is innervated by the phrenic nerve, which originates from spinal nerve roots C3-C5.

NREMT teaching highlights the phrase: "C3, 4, and 5 keep the diaphragm alive." Option A (C4) is correct because an injury at or above this level can paralyze the diaphragm, resulting in apnea and immediate respiratory failure.

Option B (T1) and C (T3) affect intercostal muscles but not the diaphragm.

Option D (L4) affects lower extremity function only.

NREMT emphasizes that high cervical spine injuries are immediately life-threatening due to loss of ventilatory control.

NEW QUESTION # 106

A 32-year-old female has a history of dysmenorrhea, abdominopelvic pain, and pain when having a bowel movement. She has not been sexually active in 8 months. Her symptoms are most likely caused by

- A. An infection that is either bacteria or a virus
- B. Endometrial tissue growing outside the uterus
- C. Spontaneous abortion
- D. Premature menopause

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

These symptoms are classic for endometriosis, where endometrial tissue grows outside the uterus.

Symptoms often include:

* Pelvic pain

* Painful menstruation (dysmenorrhea)

* Painful bowel movements or intercourse

Spontaneous abortion does not apply here due to lack of pregnancy. Premature menopause is rare at this age and presents differently. Infection is less likely in the absence of recent sexual activity or fever.

NEW QUESTION # 107

Which of the following is categorized as a personal injury prevention supply?

- A. Biohazard bag
- B. N95 respirator
- C. Disinfectant cleaning solution
- D. Pair of leather gloves

Answer: D

Explanation:

Personal injury prevention supplies are designed to protect EMS providers from physical injuries, rather than infection.

Option C (Pair of leather gloves) is correct because leather gloves protect against cuts, abrasions, and puncture injuries during rescue operations such as vehicle extrication.

Option D (N95 respirator) is personal protective equipment (PPE) for infection control, not injury prevention.

Option A and B are related to biohazard handling and decontamination.

NREMT differentiates PPE from injury-prevention equipment to ensure proper risk management.

NEW QUESTION # 108

A choking patient becomes unresponsive. What should the EMT perform next? Select the two correct options.

- A. Position the patient in recovery and administer back blows
- B. Check for a pulse
- C. Begin chest compressions
- D. Open mouth

- E. Do not ventilate until the foreign body is removed

Answer: B,C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

If a choking patient becomes unresponsive, EMTs should:

* Check for a pulse

* Begin chest compressions if no pulse is found Chest compressions can help dislodge the object. After compressions, the airway should be opened and inspected. Back blows are not appropriate for unconscious patients.

Ventilation is attempted after clearing the airway or if no object is seen. Do not withhold compressions waiting for object removal.

NEW QUESTION # 109

An EMS unit is dispatched to a mass casualty incident along with police and fire resources. Which command structure, singular or unified, should the crew expect to find in use?

- **A. Unified, because there are multiple agencies represented.**
- B. Unified, because the EMS unit will join the command team upon arrival.
- C. Singular, because there is still only one incident commander.
- D. Singular, because the fire department has the ultimate authority.

Answer: A

Explanation:

When an incident involves multiple agencies with shared responsibility, NREMT teaches that a Unified Command structure is used. This allows police, fire, EMS, and other agencies to work together under a common set of objectives while maintaining their individual authority.

Option C is correct because the defining feature of unified command is multi-agency involvement, not rank or arrival order.

Option A is incorrect because no single agency automatically has authority.

Option B misunderstands unified command, which still functions with coordinated leadership.

Option D is incorrect because EMS does not automatically become part of command.

NREMT emphasizes unified command to improve coordination, communication, and safety during MCIs.

NEW QUESTION # 110

.....

Our product boosts three versions which include PDF version, PC version and APP online version. The Emergency Medical Technicians Exam test guide is highly efficient and the forms of the answers and questions are the same.
