2026 Efficient 100% Free 2V0-16.25–100% Free Practice Mock | Free 2V0-16.25 Exam Dumps

Choosing our 2V0-16.25 exam quiz will be a wise decision that you make, because this decision may have a great impact in your future development. Having the certificate may be something you have always dreamed of, because it can prove that you have certain strength. Our 2V0-16.25 exam questions can provide you with services with pretty quality and help you obtain a certificate. Our 2V0-16.25 Learning Materials are made after many years of practical efforts and their quality can withstand the test of practice. And you will obtain the 2V0-16.25 certification just for our 2V0-16.25 study guide.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.
Topic 2	• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.
Topic 3	• IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.
Topic 4	• VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.

Topic 5	• Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.

VMware 2V0-16.25 Real Exam Questions in Three Formats

Confronting a tie-up during your review of the exam? Feeling anxious and confused to choose the perfect 2V0-16.25 Latest Dumps to pass it smoothly? We understand your situation of susceptibility about the exam, and our 2V0-16.25 test guide can offer timely help on your issues right here right now. Without tawdry points of knowledge to remember, our experts systematize all knowledge for your reference. You can download our free demos and get to know synoptic outline before buying.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q13-Q18):

NEW QUESTION # 13
An administrator is tasked with developing an automated, repeatable process to:
* Connect to the corporate Active Directory and create a Windows computer object in a defined Organizational Unit.
* Connect to the target vCenter and create a Windows VM from a template.
* Power on the VM and join it to the corporate domain.
Which VMware vSphere Foundation (VVF) component is best suited for this task?

- A. VCF Operations
- B. vSphere Supervisor
- C. VCF CLI
- D. VCF Operations Orchestrator

Answer: D

Explanation:
The scenario describes an automated, repeatable workflow:
* Create an AD computer object.
* Deploy a VM from a template.
* Power on the VM and join domain.
The correct tool is VCF Operations Orchestrator (formerly vRealize Orchestrator), which:
* Provides automation and integration with Active Directory and vCenter APIs.
* Can execute workflows for VM provisioning and domain joining.
Other options:
* A. vSphere Supervisor# Kubernetes workload management, not AD/VM automation.
* B. VCF Operations# Monitoring and analytics, not workflow automation.
* C. VCF CLI# Useful for manual scripting but not suited for automated workflows.

NEW QUESTION # 14
What is the purpose of a port group on a Distributed Switch?

- A. To allocate CPU and memory resources to virtual machines.
- B. To manage storage I/O performance.
- C. To define a logical grouping of virtual ports for network traffic segmentation.
- D. To enable vSAN connectivity.

Answer: C

Explanation:
A port group on a vSphere Distributed Switch (VDS) provides:
* Logical grouping of virtual ports.
* Defines network policies such as VLAN IDs, traffic shaping, security policies, and teaming.
* Used for segmenting traffic types (vMotion, vSAN, management, VM traffic).
Other options:
* A. Enable vSAN connectivity# Achieved by assigning vSAN traffic to a port group, but not the main definition.
* B. Allocate CPU/memory resources# Done via resource pools, not port groups.
* D. Manage storage I/O performance# Done with Storage I/O Control, not port groups.
References:
VMware vSphere 9.0 -vSphere Networking Basics
VMware Docs: Port Groups on Distributed Switch

NEW QUESTION # 15
An administrator is tasked with enabling a Supervisor in a VMware vSphere Foundation (VVF) environment using vSphere networking and the Foundation Load Balancer. The vSAN-backed cluster has been configured with a vSphere Distributed Switch. Which two actions must the administrator perform when enabling a Supervisor using vSphere networking?
(Choose two.)

- A. Enable the VM Service before deploying the Supervisor.
- B. Assign a vSphere Distributed Switch and a corresponding port group.
- C. Provide a static IP address range for the Supervisor control plane VMs.
- D. Select a vSphere namespace template to define initial namespace limits.
- E. Configure a Tier-0 Gateway with BGP or static routing.

Answer: B,C

Explanation:
When enabling a Supervisor Cluster in vSphere with Tanzu using vSphere networking and the Foundation Load Balancer:
* You must provide a static IP range for the Supervisor control plane VMs so they can be deployed with dedicated addresses. (B)
* You must assign a vSphere Distributed Switch (VDS) with an appropriate port group for Supervisor networking. (E) Other options:
* A. Namespace template# Optional after Supervisor is enabled, not required at setup.
* C. Tier-0 Gateway# Applies to NSX networking, not vSphere networking.
* D. VM Service# Enabled after Supervisor, not a prerequisite.
References:
VMware vSphere 9.0 -Enable a Supervisor Cluster with vSphere Networking VMware Docs: Supervisor Setup Networking Requirements

NEW QUESTION # 16
Which rule in a virtual machine (VM) storage policy is configured to ensure data redundancy in a VMware vSAN environment?

- A. Stripe Width
- B. Flash Read Cache Reservation
- C. Failures to Tolerate
- D. Disk Stripes Per Object

Answer: C

Explanation:
The VM Storage Policy rule that controls data redundancy in vSAN is Failures to Tolerate (FTT).
* Defines the number of hardware failures (host, disk, network) that vSAN can tolerate while maintaining data availability.
* Configurations include RAID-1 (mirroring), RAID-5/6 (erasure coding).

Other options:

* B. Disk Stripes Per Object# Defines performance striping, not redundancy.
* C. Stripe Width# Same as above, not redundancy.
* D. Flash Read Cache Reservation# Relates to caching performance, not redundancy.

NEW QUESTION # 17

An administrator creates a cluster by joining a Medium sized VMware Cloud Foundation (VCF) Operations for Logs node to an existing Medium sized single-node deployment.

The secondary node of the cluster fails, degrading the functionality of VCF Operations for Logs.

What action should the administrator take to create a healthy active cluster?

- A. Scale up the VCF Operations for Logs primary and secondary node to size Extra Large.
- B. Rebuild the VCF Operations for Logs cluster secondary node and place the cluster back into operation.
- C. Rebuild the VCF Operations for Logs cluster secondary node and add an additional node to the cluster.
- D. Scale up the VCF Operations for Logs primary and secondary node to size Large.

Answer: B

Explanation:

In VMware Cloud Foundation (VCF)Operations for Logs, clusters require aminimum of three healthy nodesto function in a fully active and resilient state. When a cluster is deployed with only two nodes (primary

+ one secondary), the environment does not meet the minimum recommended requirement. If thesecondary node fails, the cluster becomes degraded and functionality is reduced.

The correct remediation is:

* Rebuild the failed secondary nodeso that the cluster can return to a healthy state.
* After rebuilding, the node must be rejoined to the primary using theManagement # Clusterworkflow (secure token, IP/hostname of primary, etc.).

Why not the other options?

* A. Scale up to Extra Large##Scaling up affects resource capacity (vCPU, RAM, disk) but does not solve the problem of missing nodes.
* B. Scale up to Large##Same reason as above, scaling up does not restore HA.
* D. Rebuild the secondary and add an additional node##While adding more nodes is a best practice (since HA clusters require three nodes), theminimum action requiredto restore a healthy active cluster is torebuild the failed node. Adding more nodes is optional for increased resiliency.

Therefore, the immediate and verified answer is torebuild the failed secondary node.
