If you are determined to purchase our 312-38 latest dumps materials, please prepare a credit card for payment. For most countries we just support credit card. You can click the PDF version or Soft version or the package of EC-COUNCIL 312-38 latest dumps,

add to cart, then you enter your email address, discount (if have) and click payment, then page transfers to credit card payment. After payment our system will send you an email including downloading link of 312-38 Latest Dumps, account & password, you can click the link and download soon.

## EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q482-Q487):

### NEW QUESTION # 482

James wants to implement certain control measures to prevent denial-of-service attacks against the organization. Which of the following control measures can help James?

- A. Strong passwords
- B. Reduce the sessions time-out duration for the connection attempts
- C. A honeypot in DMZ
- D. Provide network-based anti-virus

**Answer: C**

Explanation:

Implementing a honeypot in the Demilitarized Zone (DMZ) can be an effective control measure against denial-of-service (DoS) attacks. A honeypot is a decoy system designed to attract attackers and divert them from legitimate targets. By deploying a honeypot in the DMZ, James can monitor and analyze incoming traffic to identify and mitigate DoS attacks. This proactive security measure allows the organization to detect and respond to malicious activities before they impact critical systems and services.

### NEW QUESTION # 483

Which of the following is a distributed application architecture that partitions tasks or work loads between service providers and service requesters? Each correct answer represents a complete solution. Choose all that apply.

- A. Peer-to-peer (P2P) computing
- B. Client-server networking
- C. Client-server computing
- D. Peer-to-peer networking

**Answer: B,C**

### NEW QUESTION # 484

Richard has been working as a Linux system administrator at an MNC. He wants to maintain a productive and secure environment by improving the performance of the systems through Linux patch management. Richard is using Ubuntu and wants to patch the Linux systems manually. Which among the following command installs updates (new ones) for Debian based Linux OSes?

- A. sudo apt-get upgrate
- B. sudo apt-get update
- C. sudo apt-get dist-update
- D. sudo apt-get dist-upgrade

**Answer: D**

Explanation:

The command `sudo apt-get dist-upgrade` is used to install updates for Debian-based Linux operating systems, which includes Ubuntu. This command intelligently handles changes with new versions of packages and will install the newest versions of all packages currently installed on the system. It also handles changing dependencies with new versions of packages and will attempt to upgrade the most important packages at the expense of less important ones if necessary. The `dist-upgrade` command, therefore, will install or remove packages as necessary to complete the full update.

References: This information is consistent with the best practices for maintaining a Debian-based system, as outlined in the Debian and Ubuntu documentation. The `apt-get` command is a powerful package management tool used in Debian-based systems for handling packages, and `dist-upgrade` is a specific option within `apt-get` that is designed for an intelligent system-wide upgrade.

### NEW QUESTION # 485

Which event type indicates a significant problem such as loss of data or loss of functionality?

- A. Error
- B. Information
- C. Warning
- D. Failure Audit

**Answer: A**

Explanation:

In the context of network security and event management, an 'Error' event type typically indicates a significant problem that could result in loss of data or loss of functionality. These events are logged when a system or application experiences a severe issue that prevents it from continuing normal operation. Unlike warnings or informational events, error events suggest a critical condition that may require immediate attention to prevent further damage or data loss.

### NEW QUESTION # 486

During the recovery process, RTO and RPO should be the main parameters of your disaster recovery plan. What does RPO refer to?

- A. The hot plugging technique used to replace computer components
- B. The encryption feature, acting as add-on security to the data
- C. The interval after which the data quality is lost
- D. The duration required to restore the data

**Answer: C**

Explanation:

Recovery Point Objective (RPO) refers to the maximum tolerable period in which data might be lost from an IT service due to a major incident. It is a critical parameter in disaster recovery and business continuity planning. RPO is determined based on the acceptable data loss in case of a disruption of operations. It indicates the point in time to which data must be recovered after an outage to resume business operations and avoid unacceptable consequences associated with a break in business continuity.

Reference:

EC-Council's Certified Network Defender (CND) training materials.

Business Continuity and Disaster Recovery Planning definitions and best practices as outlined in the CND curriculum1.

### NEW QUESTION # 487

.....

cracking the EC-COUNCIL 312-38 examination needs preparation from an updated EC-COUNCIL 312-38 exam questions. To pave your way towards exam success, PrepAwayPDF has hired a team of professionals.
