## BCS TM3 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Managing the Team: This section addresses the role of Test Leads in analyzing team needs, identifying required skills, and coordinating efforts using a whole-team approach. Candidates are expected to understand how to align team capabilities with project goals and ensure effective collaboration. The syllabus highlights techniques for team management, resource allocation, and fostering continuous improvement through retrospectives and knowledge sharing to optimize testing performance.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Managing the Product: This section emphasizes understanding and managing the product under test, focusing on controlling and assessing testing activities. It covers test metrics, reporting, and defect management across sequential, Agile, and hybrid environments. Candidates should be able to select and apply appropriate test estimation techniques and establish defect workflows suited to the project context. The syllabus also includes preparing business cases for testing activities that justify costs, benefits, and the value of testing within the overall project.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Managing the Test Activities: This section focuses on the role of Test Managers and how testing is planned, monitored, controlled, and completed across different software development contexts. It covers the overall test process, including defining test plans, tracking progress, and ensuring proper closure. Candidates are expected to understand how testing fits within various lifecycle models, test levels, and types, while engaging stakeholders effectively. The syllabus emphasizes risk-based testing to identify quality risks, assess impacts, and select suitable mitigation activities. It also highlights formulating project-level test strategies, selecting appropriate test approaches, setting measurable objectives, and improving processes through models like IDEAL. Additionally, candidates should be able to evaluate and introduce test tools based on business needs, risks, and return on investment.</li></ul>

## BCS ISTQB Certified Tester Advanced Level - Test Management v3.0 Sample Questions (Q12-Q17):

### NEW QUESTION # 12

You are a tester working in an Agile team for the tax office. Developers on the team have been trained and are experienced in component testing, including various types of code coverage and reviews. The test policy has a clear statement that shift-left is a main focus in trying to achieve software quality. The team is currently developing a new version of the critical income tax application. Which test activities would you propose to mitigate the risks for the most critical features in the new version of the income tax application?

- A. Introduce code reviews and statement coverage criteria
- B. Define strict entry and exit criteria between the various test levels
- C. Introduce IEC 61508 as a standard to follow, prescribing the test techniques and required level of coverage
- **D. Introduce formal test design techniques, e.g., decision tables and equivalence partitioning, during system testing**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:

The syllabus emphasizes applying appropriate test design techniques based on risk and test level. In an Agile, shift-left context where developers already perform component testing with coverage and reviews, the incremental risk mitigation for critical business features at system level comes from applying system-appropriate formal test design techniques (e.g., equivalence partitioning, boundary value analysis, decision tables) to ensure thorough functional coverage of critical logic and business rules.

Option A (strict entry/exit criteria) is a control mechanism but does not directly enhance thoroughness for critical features.

Option B (IEC 61508) is a safety standard not appropriate for a tax application and would be disproportionate.

Reference: ISTQB CTAL-TM v3.0 Syllabus, Chapter 3 (Test Planning, Monitoring, and Control) on selecting test design techniques by level and risk; Chapter 4 (Risk-Based Testing) on focusing additional test design rigor on high-risk features; Agile testing alignment in the syllabus sections that highlight shift-left and tailoring practices per level.

### NEW QUESTION # 13

Which of the following is not a key decision when defining a project test strategy?

- **A. Selection of test tools**
- B. Selection of test levels
- C. Selection of test types
- D. Selection of test techniques

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:

In the AL Test Manager syllabus, defining the project test strategy/approach focuses on what to test and how to test at a high level, which explicitly includes decisions such as the selection of test levels, the selection of test types, and the selection of test design techniques as part of the approach definition and planning. Tool decisions are addressed under test tools and automation planning and are not listed among the core strategy-defining decisions.

References: ISTQB CTAL-TM v3.0 Syllabus-Chapter 2 (Test Management in the Organization: policy /strategy alignment and strategy content), Chapter 3 (Test Planning: test approach content including levels, types, techniques), and Chapter 6 (Test Tool and Automation: tool strategy and selection).

### NEW QUESTION # 14

You have been contracted to manage the user acceptance testing of a new reservation system for a travel agency. The reservation

system is being developed by a third party. Detailed specifications are available, and an estimate of the total development effort exists. The system will be delivered in four agreed increments.

Which of the following estimation techniques would be most appropriate to use in this context?

- A. Planning poker
- B. Wide-band Delphi
- **C. Estimation based on ratios**
- D. Extrapolation

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:

The syllabus describes ratio-based estimation (e.g., estimating test effort as a proportion of known or estimated development effort) as appropriate when reliable development-effort data or estimates and clear scope are available. Here, detailed specifications exist, overall development effort is estimated, and increments are defined-conditions well-suited to ratio-based estimation.

Extrapolation requires comparable historical test data for this context.

Wide-band Delphi is useful when data is scarce and expert consensus is needed.

Planning poker is typically used by Agile development teams to size user stories, not for contracting UAT with a third party.

### NEW QUESTION # 15

Analytical test improvement approaches identify problems based on data from the project or team.

Appropriate improvements can be derived from an analysis of the identified set of problems.

Which of the following is not an example of an analytical-based test process improvement approach?

- **A. Quantitative TPI NEXT assessment**
- B. Analysis using measures, metrics and indicators
- C. The Goal Question Metric (GQM) approach
- D. Root cause analysis

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:

The syllabus classifies improvement approaches including analytical approaches (e.g., root cause analysis, GQM, and analysis of measures/metrics/indicators) that derive improvements by analysing project/team data.

Model-based approaches (e.g., TMMi, TPI NEXT) are a distinct category that evaluate practices against a reference model rather than primarily deriving improvements from project data analysis.

Hence, B (Quantitative TPI NEXT assessment) is model-based, not an analytical approach; A, C, and D are analytical.

(References: CTAL-TM v3.0 Syllabus - Chapter 2 "Test Management in the Organization" - improvement approaches: analytical vs. model-based vs. other; examples provided for each category.)

### NEW QUESTION # 16

You are a tester working in an Agile team in the finance domain. The team consists of 6 members, and you are the only tester. The team is responsible for the development and maintenance of a mobile front-end application. The application is considered to be critical with respect to customer impact and market branding.

You have been asked to identify which test management activity needs to be performed within the team to enhance test maturity and achieve a higher level of product quality.

Which test management activity would you recommend the team should adopt?

- A. Increase coverage by automating more tests
- B. Define quality criteria for user stories and acceptance criteria
- **C. Perform product risk identification and analysis**
- D. Provide detailed estimations early for each test level

**Answer: C**

Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:
