UiPath Specialized AI Associate Exam (2023.10) Sample Questions (Q58-Q63):

NEW QUESTION # 58

What is the main difference between an array and a list in UiPath?

- A. An array is a fixed-size collection of elements of different types while a list is a dynamic-sized collection of elements of the same type.
- B. An array is a dynamic-sized collection of elements of the same type while a list is a fixed-size collection of elements of the same type.
- C. An array is a fixed-size collection of elements of the same type while a list is a dynamic-sized collection of elements of different types.
- D. An array is a fixed-size collection of elements of the same type while a list is a dynamic-sized collection of elements of the

same type.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

- * Arrays in UiPath (VB.NET) are fixed-size and must be initialized with a defined number of elements of the same type.
- * Lists (List<T>) are dynamic and allow you to add/remove elements at runtime, but still enforce type safety (same type elements).

NEW QUESTION # 59

How does AI Center handle versioning of ML packages?

- A. Only ML packages retrained via pipelines change their minor version.
- B. Versioning is not supported for ML packages.
- C. Only ML packages retrained via pipelines change their major version.
- D. Only ML packages uploaded by users change their minor version.

Answer: A

Explanation:

In UiPath AI Center, versioning of ML packages is an integral part of managing the lifecycle of machine learning models. Each ML package has a major and minor version to track changes. When an ML package is initially uploaded, it is assigned a major version (e.g., 1.0). If a package is retrained via pipelines, it increments the minor version (e.g., from 1.0 to 1.1). This mechanism helps differentiate between user-uploaded packages and those that have been retrained. Only packages that undergo retraining through pipelines modify their minor version, not the major version. Thus, answer D is correct.

NEW QUESTION # 60

Which UiPath Communications Mining model performance factor assesses the proportion of the entire dataset that has informative label predictions?

- A. Average label performance.
- B. Balance.
- C. Underperforming labels.
- D. Coverage.

Answer: D

Explanation:

According to the UiPath Communications Mining documentation, coverage is one of the four main factors that contribute to the model rating, which is a holistic measure of the model's performance and health.

Coverage assesses the proportion of the entire dataset that has informative label predictions, meaning that the predicted labels are not generic or irrelevant. Coverage is calculated as the percentage of verbatims (communication units) that have at least one informative label out of the total number of verbatims in the dataset. A high coverage indicates that the model is able to capture the main topics and intents of the communications, while a low coverage suggests that the model is missing important information or producing noisy predictions.

NEW QUESTION # 61

Considering the Process Design phase, what should be Taken into consideration as a best practice when creating the scope for the automation?

- A. Document Types. Technical Criteria, Templates. Languages, Scans/Digital docs, OCR quality.
- B. Document Types. Taxonomy. Templates. Languages. Scans/Digital docs, Success Criteria. Technical Criteria.

- C. Document Types. Templates. Technical Criteria. Languages. Scans/Digital docs. Success Criteria. OCR engines.
- D. Document Types. Taxonomy. Languages.Success Criteria. OCR, ML Model.

Answer: B

Explanation:

When creating the scope for automation during the Process Design phase, several critical factors need to be taken into account to ensure a successful automation project. These include:

Document Types: The types of documents that will be processed (invoices, receipts, etc.).

Taxonomy: The classification and structuring of the data that will be extracted.

Templates: The standardized formats for documents, which can improve extraction accuracy.

Languages: The different languages in which documents are written, affecting the need for multilingual support.

Scans/Digital Docs: Whether the documents are scanned or born-digital, impacting the accuracy of OCR.

Success Criteria: Clear metrics that define the success of the automation (such as accuracy or processing time).

Technical Criteria: Requirements related to the infrastructure, integration, and tools being used (OCR engines, ML models, etc.).

These elements are crucial in defining the technical and functional requirements for automating document processing tasks effectively, ensuring that the scope covers all necessary considerations.
