- A. Tuning Studio allows selective parameter updates, reducing the need to retrain the entire model for each new task.
- B. Tuning Studio enables real-time, dynamic adjustments to the model's architecture during inference to handle new tasks.
- C. Tuning Studio integrates with existing AI infrastructure to streamline model fine-tuning without requiring complex deployment processes.
- D. Tuning Studio offers fine-tuning with minimal data, allowing users to adapt models to niche tasks without needing large datasets.

Answer: B

NEW QUESTION # 122

When using IBM Watsonx Tuning Studio, what is the recommended approach to determining the number of training data examples required for effective model fine-tuning?

- A. Use at least 10,000 examples for each unique task to ensure the model retains its general knowledge and effectively adapts to the new task.
- B. Use a minimum of 1,000 to 5,000 examples for each task, but focus on the quality and relevance of examples rather than quantity.
- C. Use at least 50% of the original training data to ensure the fine-tuned model generalizes well across both new and existing tasks.
- D. Use no more than 100 examples per task to avoid overwhelming the model's general capabilities with task-specific data.

Answer: B
