Pass Guaranteed 2026 High-quality DP-203: Data Engineering on Microsoft Azure Study Dumps

The Microsoft sector is an ever-evolving and rapidly growing industry that is crucial in shaping our lives today. With the growing demand for skilled Microsoft professionals, obtaining Data Engineering on Microsoft Azure (DP-203) certification exam has become increasingly important for those who are looking to advance their careers and stay competitive in the job market.

Microsoft Data Engineering on Microsoft Azure Sample Questions (Q138-Q143):

NEW QUESTION # 138

You have an Azure Active Directory (Azure AD) tenant that contains a security group named Group1. You have an Azure Synapse Analytics dedicated SQL pool named dw1 that contains a schema named schema1.

You need to grant Group1 read-only permissions to all the tables and views in schema1. The solution must use the principle of least privilege.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/data-share/how-to-share-from-sql>

NEW QUESTION # 139

You are designing an Azure Databricks interactive cluster. The cluster will be used infrequently and will be configured for auto-termination.

You need to ensure that the cluster configuration is retained indefinitely after the cluster is terminated. The solution must minimize costs.

What should you do?

- A. Terminate the cluster manually when processing completes.
- **B. Pin the cluster.**
- C. Create an Azure runbook that starts the cluster every 90 days.
- D. Clone the cluster after it is terminated.

Answer: B

Explanation:

Explanation

To keep an interactive cluster configuration even after it has been terminated for more than 30 days, an administrator can pin a cluster to the cluster list.

<https://docs.azuredatabricks.net/clusters/clusters-manage.html#automatic-termination>

NEW QUESTION # 140

You configure version control for an Azure Data Factory instance as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Letter Description automatically generated

Box 1: adf_publish

The Publish branch is the branch in your repository where publishing related ARM templates are stored and updated. By default, it's adf_publish.

Box 2: / dwh_batchet/adf_publish/contososales

Note: RepositoryName (here dwh_batchet): Your Azure Repos code repository name. Azure Repos projects contain Git repositories to manage your source code as your project grows. You can create a new repository or use an existing repository that's already in your project.

Reference:
<https://docs.microsoft.com/en-us/azure/data-factory/source-control>

NEW QUESTION # 141

You have an Azure Data Lake Storage Gen 2 account named storage1.

You need to recommend a solution for accessing the content in storage1. The solution must meet the following requirements:

List and read permissions must be granted at the storage account level.

Additional permissions can be applied to individual objects in storage1.

Security principals from Microsoft Azure Active Directory (Azure AD), part of Microsoft Entra, must be used for authentication.

What should you use? To answer, drag the appropriate components to the correct requirements. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□

NEW QUESTION # 142

You manage an enterprise data warehouse in Azure Synapse Analytics.

Users report slow performance when they run commonly used queries. Users do not report performance changes for infrequently used queries.

You need to monitor resource utilization to determine the source of the performance issues.

Which metric should you monitor?

- A. DWU percentage
- B. Cache used percentage
- C. Local tempdb percentage
- D. Data IO percentage

Answer: B

Explanation:

Monitor and troubleshoot slow query performance by determining whether your workload is optimally leveraging the adaptive cache for dedicated SQL pools.
