100% Pass Quiz Palo Alto Networks - PCNSE - Palo Alto Networks Certified Network Security Engineer Exam –Valid Dumps PDF

If you want to pass the PCNSE exam, our PCNSE practice questions are elemental exam material you cannot miss. It is proved by our loyal customers that our passing rate of PCNSE practice materials has reached up to 98 to 100 percent up to now. Besides, free updates of PCNSE Exam Torrent will be sent to your mailbox freely for one year, hope you can have a great experience during usage of our PCNSE practice materials.

The PCNSE Certification is aimed at security professionals who want to enhance their expertise and knowledge in the field of network security by applying the best practices and industry standards in designing and deploying next-generation firewall solutions. Palo Alto Networks Certified Network Security Engineer Exam certification exam covers a wide range of topics, including firewalls, networking, security policies, threat prevention, user identification, and advanced features of Palo Alto Networks PAN-OS 10.0.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q315-Q320):

NEW QUESTION # 315
Your company occupies one floor in a single building. You have two Active Directory domain controllers on a single network. The firewall's management-plane resources are lightly utilized.
Given the size of this environment, which User-ID collection method is sufficient?

- A. PAN-OS integrated agent deployed on the firewall
- B. Windows-based agent deployed on each domain controller
- C. Citrix terminal server agent deployed on the network
- D. a syslog listener

Answer: A

Explanation:
The PAN-OS Integrated Agent is more efficient in terms of network resources since it filters logs, whereas the Windows-Based Agent sends all security logs to the firewall.

NEW QUESTION # 316
An auditor is evaluating the configuration of Panorama and notices a discrepancy between the Panorama template and the local firewall configuration.
When overriding the firewall configuration pushed from Panorama, what should you consider?

- A. Only Panorama can revert the override.
- B. The modification will not be visible in Panorama.
- C. Panorama will update the template with the overridden value.
- D. The firewall template will show that it is out of sync within Panorama.

Answer: D

Explanation:
When a firewall's local configuration overrides a Panorama template, Panorama detects this discrepancy and marks the template as out of sync (Option D) in the UI (e.g., under Templates > Device status). This alerts administrators to resolve the conflict.

NEW QUESTION # 317
A firewall administrator has confirm reports of a website is not displaying as expected, and wants to ensure that decryption is not causing the issue. Which three methods can the administrator use to determine if decryption is causing the website to fail? (Choose three.)

- A. Investigate decryption logs of the specific traffic to determine reasons for failure.
- B. Create a policy-based "No Decrypt" rule in the decryption policy to include specific traffic from decryption.
- C. Disable SSL handshake logging
- D. Temporarily disable SSL decryption for all websites to troubleshoot the issue
- E. Move the policy with action decrypt to the top of the decryption policy rulebase.

Answer: A,B,D

NEW QUESTION # 318

In High Availability, which information is transferred via the HA data link?

- A. User-ID information
- B. heartbeats
- C. session information
- D. HA state information

Answer: C

Explanation:

Data Link	The HA2 link is used to synchronize sessions, forwarding tables, IPSec security associations and ARP tables between firewalls in an HA pair. Data flow on the HA2 link is always unidirectional (except for the HA2 keep-alive); it flows from the active or active-primary firewall to the passive or active-secondary firewall. The HA2 link is a Layer 2 link, and it uses ether type 0x7261 by default.
	Ports used for HA2—The HA data link can be configured to use either IP (protocol number 99) or UDP (port 29281) as the transport, and thereby allow the HA data link to span subnets.

https://docs.paloaltonetworks.com/pan-os/10-0/pan-os-admin/high-availability/ha-concepts/ha- links-and-backup-links.html

NEW QUESTION # 319

An administrator sees several inbound sessions identified as unknown-tcp in the Traffic logs. The administrator determines that these sessions are form external users accessing the company's proprietary accounting application. The administrator wants to reliably identify this traffic as their accounting application and to scan this traffic for threats.
Which option would achieve this result?

- A. Create a custom App-ID and use the "ordered conditions" check box.
- B. Create an Application Override policy and custom threat signature for the application.
- C. Create a custom App-ID and enable scanning on the advanced tab.
- D. Create an Application Override policy.

Answer: C
