Oracle 1Z1-922 Latest Examprep, 1Z1-922 New Dumps Files

VCE4Dumps's training materials can test your knowledge in preparing for the exam, and can evaluate your performance within a fixed time. The instructions given to you for your weak link, so that you can prepare for the exam better. The VCE4Dumps's Oracle

1Z1-922 Exam Training materials introduce you many themes that have different logic. So that you can learn the various technologies and subjects. We guarantee that our training materials has tested through the practice. VCE4Dumps have done enough to prepare for your exam. Our material is comprehensive, and the price is reasonable.

Oracle MySQL Implementation Associate Sample Questions (Q244-Q249):

NEW QUESTION # 244

Which replication topology is best suited for consolidating data from multiple sources into a single replica?

- A. Multi-primary replication
- B. Group replication
- C. Multi-source replication
- D. Circular replication

Answer: C

Explanation:

Multi-source replication allows a single replica to receive data from multiple primary servers. This is ideal for consolidating data from various sources into a single, unified replica.

NEW QUESTION # 245

What is the role of the storage engine in MySQL architecture?

- A. To handle data storage, retrieval, and indexing
- B. To manage user authentication and permissions
- C. To execute queries and return results to clients
- D. To analyze query performance and provide optimization suggestions

Answer: A

Explanation:

The storage engine in MySQL, such as InnoDB or MyISAM, is responsible for managing how data is stored, retrieved, indexed, and updated. Different storage engines provide different features, such as transaction support or full-text indexing.

NEW QUESTION # 246

What does MySQL InnoDB Cluster's use of Group Replication ensure?

- A. High performance for read-heavy workloads
- B. Automatic fault tolerance and failover
- C. Transactions are asynchronously replicated
- D. Backup files are compressed

Answer: B

Explanation:

Group Replication in MySQL InnoDB Cluster ensures automatic fault tolerance and failover, allowing the cluster to continue operating if one node fails by automatically promoting another node to take over as the primary server.

NEW QUESTION # 247

In a MySQL InnoDB Cluster, what happens when a node becomes unreachable?

- A. All write operations are blocked
- B. The node is automatically demoted to a replica
- C. The remaining nodes continue to operate, and the cluster self-heals when the node recovers
- D. The cluster stops all transactions until the node recovers

Answer: C

Explanation:

If a node in a MySQL InnoDB Cluster becomes unreachable, the remaining nodes continue to operate, and the cluster adjusts by removing the failed node from the group. When the node recovers, it rejoins the cluster and synchronizes its data.

NEW QUESTION # 248

Which of the following replication topologies allows for multi-master replication where updates can be made on multiple servers?

- A. Group replication
- **B. Multi-primary replication**
- C. Circular replication
- D. Primary-replica

Answer: B

Explanation:

Multi-primary replication (or multi-master replication) allows updates to be made on multiple servers, and those updates are propagated to the other servers in the replication group.

NEW QUESTION # 249

.....

Our 1Z1-922 training materials are designed to help users consolidate what they have learned, will add to the instant of many training, the user can test their learning effect in time after finished the part of the learning content, have a special set of wrong topics in our 1Z1-922 guide torrent, enable users to find their weak spot of knowledge in this function, iterate through constant practice, finally reach a high success rate. As a result, our 1Z1-922 study questions are designed to form a complete set of the contents of practice can let users master knowledge to pass the 1Z1-922 exam.
