Training ADA-C02 Online - Exam ADA-C02 Cram Review

Preparing for the ADA-C02 exam can be a daunting task, but with real ADA-C02 exam questions, it can be a lot easier. The importance of actual SnowPro Advanced Administrator ADA-C02 (ADA-C02) questions cannot be overemphasized. ADA-C02 Real Questions are crucial for passing the ADA-C02 exam. When candidates have access to the updated Snowflake ADA-C02 practice test questions, they are better prepared to succeed.

Snowflake SnowPro Advanced Administrator ADA-C02 Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which statement allows a Snowflake Administrator to retrieve the network policy applied to their Snowflake account?

- A. DESC NETWORK POLICY <policy_name>;
- **B. SHOW PARAMETERS LIKE 'NETWORK POLICY' IN ACCOUNT;**
- C. SHOW NETWORK POLICIES IN ACCOUNT;
- D. SHOW NETWORK POLICIES;

Answer: B

Explanation:

The network policy applied at the account level is stored as an account parameter. Using a SHOW PARAMETERS command with the filter for NETWORK POLICY at the account scope returns the currently configured value, which identifies the network policy associated with the account.

NEW QUESTION # 48

A Snowflake customer is experiencing higher costs than anticipated while migrating their data warehouse workloads from on-premises to Snowflake. The migration workloads have been deployed on a single warehouse and are characterized by a large number of small INSERTS rather than bulk loading of large extracts. That single warehouse has been configured as a single cluster, 2XL because there are many parallel INSERTS that are scheduled during nightly loads.

How can the Administrator reduce the costs, while minimizing the overall load times, for migrating data warehouse history?

- **A. The warehouse should be kept as a SMALL or XSMALL and configured as a multi-cluster warehouse to handle the parallel load queries.**
- B. There should be another 2XL warehouse deployed to handle a portion of the load queries.
- C. The INSERTS should be converted to several tables to avoid contention on large tables that slows down query processing
- D. The 2XL warehouse should be changed to 4XL to increase the number of threads available for parallel load queries.

Answer: A

Explanation:

For many small, parallel INSERTS, using a multi-cluster warehouse with smaller size (SMALL or XSMALL) allows more concurrent queries to run efficiently and reduces costs compared to a single large warehouse. This configuration improves concurrency without unnecessary compute expense.

NEW QUESTION # 49

An Administrator loads data into a staging table every day. Once loaded, users from several different departments perform transformations on the data and load it into different production tables.

How should the staging table be created and used to MINIMIZE storage costs and MAXIMIZE performance?

- **A. Create it as a transient table with a retention time of 0 days.**
- B. Create it as an external table, which will not incur Time Travel costs.
- C. Create it as a permanent table with a retention time of 0 days.
- D. Create it as a temporary table with a retention time of 0 days.

Answer: A

Explanation:

A transient table is best suited for staging because it avoids long-term storage costs by not maintaining Fail-safe and can have Time Travel retention set to 0 days. This minimizes storage costs while still providing performance comparable to permanent tables, making it the optimal choice for daily staging data.

NEW QUESTION # 50

What roles can be used to create network policies within Snowflake accounts? (Choose three.)

- **A. ORGADMIN**
- **B. ACCOUNTADMIN**
- C. Any role that owns the database where the network policy is created
- D. Any role with the global permission of CREATE NETWORK POLICY
- **E. SECURITYADMIN**
- F. SYSADMIN

Answer: A,B,E

Explanation:

SECURITYADMIN, ACCOUNTADMIN, and ORGADMIN roles can create network policies in Snowflake accounts. These roles have the necessary privileges to manage account-level security policies.

NEW QUESTION # 51

An Administrator has a user who needs to be able to suspend and resume a task based on the current virtual warehouse load, but this user should not be able to modify the task or start a new run.

What privileges should be granted to the user to meet these requirements? (Choose two.)

- A. USAGE on the database and schema containing the task
- B. OPERATE on the task
- C. EXECUTE TASK on the task
- D. OWNERSHIP on the database and schema containing the task
- E. OWNERSHIP on the task

Answer: A,B

Explanation:

To suspend and resume a task, the user needs the OPERATE privilege on the task. Additionally, USAGE on the database and schema containing the task is required to access it. Granting these together allows control of task state without giving modification or ownership rights.

NEW QUESTION # 52
