Esri ArcGIS Utility Network Associate 2024 Sample Questions (Q55-Q60):

NEW QUESTION # 55

What is the key difference between a domain network and a structure network in ArcGIS Utility Network?

- A. Structure networks enforce connectivity, while domain networks enforce containment
- **B. Domain networks carry resources, while structure networks provide support**
- C. Domain networks define ranks, while structure networks manage terminal paths

Answer: B

Explanation:

Domain networks model the flow of resources (e.g., water, electricity), while structure networks provide physical support.

NEW QUESTION # 56

Before migrating source data into a utility network in ArcGIS Pro, what step must be performed to ensure features will connect properly?

- **A. Ensure all data is properly snapped**
- B. Assign asset packages
- C. Enable topology

Answer: A

Explanation:

Snapping ensures connectivity and prevents errors like gaps or overlaps during migration.

NEW QUESTION # 57

Which two requirements must be met before batch calculation attribute rules can be evaluated in a utility network?

- A. Network diagrams and subnetwork controllers
- B. File geodatabase and enabled topology
- C. Enterprise geodatabase and branch versioning

Answer: C

Explanation:

Batch calculation rules require an enterprise geodatabase and branch versioning.

NEW QUESTION # 58

What do terminals in ArcGIS Utility Network model?

- A. Locations or ports where resources flow in and out of devices or junctions
- B. Ranks that define trace order
- C. Categories used to tag subnetwork controllers

Answer: A

Explanation:

Terminals model ports where utilities enter/exit devices, such as valves in water systems or breakers in electric networks.

NEW QUESTION # 59

When creating and managing terminals in ArcGIS Utility Network, which process correctly describes the required steps?

- A. Create a terminal configuration, assign it to asset groups/types, and define valid and default paths
- B. Allow topology validation to auto-generate terminals
- C. Use only system-provided attributes for terminal management

Answer: A

Explanation:

Terminals are created through configurations assigned to asset groups and types, defining valid paths and flow direction.

NEW QUESTION # 60

.....

Just the same as the free demo, we have provided three kinds of versions of our EUNA_2024 preparation exam, among which the PDF version is the most popular one.
