

# IBM C1000-185 Exam Price - C1000-185 Reliable Test Materials

DOWNLOAD the newest ActualtestPDF C1000-185 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1tRL3RUU2zAYheyGPRPwA5XHxwBRPmJWs>

ActualtestPDF is a website that provide the counseling courses for IT professionals to participate in IBM certification C1000-185 exam and help them get the IBM C1000-185 certification. The courses of ActualtestPDF is developed by experienced experts' extensive experience and expertise and the quality is very good and have a very fast update rate. Besides, exercises we provide are very close to the real exam questions, almost the same. When you select ActualtestPDF, you are sure to 100% pass your first time to participate in the difficult and critical IBM Certification C1000-185 Exam.

In today's society, there are increasingly thousands of people put a priority to acquire certificates to enhance their abilities. With a total new perspective, C1000-185 study materials have been designed to serve most of the office workers who aim at getting an exam certification. Moreover, C1000-185 Exam Questions have been expanded capabilities through partnership with a network of reliable local companies in distribution, software and product referencing for a better development. That helping you pass the C1000-185 exam successfully has been given priority to our agenda.

## C1000-185 Reliable Test Materials - Latest C1000-185 Braindumps Files

We all know that the C1000-185 exam is not easy to pass and the certification is not easy to get. But where is a will, there is a way. if you are really determined, go buy C1000-185 study materials now. With the help of C1000-185 learning guide, your road will go more smoothly. If you want to know more about our products, maybe you can use the trial version of C1000-185 simulating exam first. Of course, you can also spend a few minutes looking at the feedbacks to see how popular our C1000-185 exam questions are.

## IBM watsonx Generative AI Engineer - Associate Sample Questions (Q176-Q181):

### NEW QUESTION # 176

You are part of a team building an AI-powered assistant that helps software developers by answering technical queries. To handle the vast amount of technical documentation efficiently, the team has chosen to implement the Retrieval-Augmented Generation (RAG) pattern. LangChain is used to construct the retrieval-generation pipeline, and SingleStore is employed to store the document embeddings. You need to ensure that the integration of LangChain with SingleStore allows for real-time retrieval of relevant technical documentation.

Which of the following configurations should be used to ensure an optimal RAG implementation with LangChain and SingleStore?

- A. Use LangChain to embed both queries and documents into the same vector space and store these embeddings in SingleStore. During inference, retrieve documents using SQL queries based on keyword similarity.
- **B. Use LangChain to embed documents into a vector space and store these embeddings in SingleStore. During inference, embed the query in the same vector space and retrieve documents using vector similarity search.**
- C. Use LangChain to retrieve previously generated embeddings from SingleStore, then match these embeddings against the query using cosine similarity before passing them to the generative model.
- D. Use LangChain to retrieve pre-generated embeddings from SingleStore, and then fine-tune the generative model based on the retrieved embeddings to improve response accuracy.

**Answer: B**

#### NEW QUESTION # 177

In IBM Watsonx's Prompt Lab, you are refining a prompt to improve the clarity and relevance of the AI's responses. You need to understand which prompt editing options are available to optimize your results.

Which of the following is NOT an available prompt editing option?

- A. Adjusting the context window to include or exclude specific sections of input text.
- **B. Using tone adjustments to modify the emotional tone or style of the AI's responses.**
- C. Setting conditions within the prompt to handle different scenarios based on detected input patterns.
- D. Adding dynamic variables to the prompt, allowing for flexible and context-specific responses.

**Answer: B**

#### NEW QUESTION # 178

You are tasked with fine-tuning a pre-trained language model for a customer support chatbot. The dataset you're using is mostly unstructured text from chat logs.

What steps should you take to prepare the dataset for fine-tuning to ensure optimal model performance?

- A. Randomly split the data into training, validation, and test sets.
- B. Normalize the text by removing all punctuation, special characters, and converting text to lowercase.
- **C. Use domain-specific tokenization to better capture important keywords and phrases relevant to customer support.**
- D. Use data augmentation techniques like paraphrasing to artificially increase the dataset size.

**Answer: C**

#### NEW QUESTION # 179

IBM Watsonx Tuning Studio offers several benefits when fine-tuning pre-trained models for specific tasks.

Which of the following is not a key benefit of using Tuning Studio?

- **A. Tuning Studio enables real-time, dynamic adjustments to the model's architecture during inference to handle new tasks.**
- B. Tuning Studio offers fine-tuning with minimal data, allowing users to adapt models to niche tasks without needing large datasets.
- C. Tuning Studio integrates with existing AI infrastructure to streamline model fine-tuning without requiring complex deployment processes.
- D. Tuning Studio allows selective parameter updates, reducing the need to retrain the entire model for each new task.

**Answer: A**

#### NEW QUESTION # 180

You are deploying a Generative AI solution for a client who needs to generate customer service emails in multiple languages. The client has provided a dataset of historical customer service emails, and they want to ensure that their generative model consistently produces accurate, contextually appropriate responses across different languages. The client also has concerns about the latency of the model's responses. Based on these requirements, you are tasked with planning the deployment of the generative AI solution. Which deployment strategy would be most appropriate for this client's needs, considering latency, language handling, and response quality?

- A. Use a fine-tuned model per language, with nucleus sampling and run them on a single GPU instance to reduce the infrastructure cost.
- B. Deploy a tuned prompt for each language on separate models, using greedy decoding to minimize latency, and scale across multiple GPUs for each language.
- C. Deploy a single multilingual model using beam search decoding, and run the model on a single GPU cluster to ensure consistent responses.
- D. Deploy a single multilingual model with tuned prompts for each language, using top-k sampling and leveraging a multi-GPU distributed environment to balance response time and quality.

**Answer: D**

## NEW QUESTION # 181

.....

Users are buying something online (such as C1000-185 learning materials), always want vendors to provide a fast and convenient sourcing channel to better ensure the user's use. Because without a quick purchase process, users of our C1000-185 learning materials will not be able to quickly start their own review program. So, our company employs many experts to design a fast sourcing channel for our C1000-185 Learning Materials. All users can implement fast purchase and use our learning materials.
