

Pass Guaranteed 2026 Newest Fortinet FCP_FCT_AD-7.4: Real FCP - FortiClient EMS 7.4 Administrator Testing Environment

Our FCP_FCT_AD-7.4 latest preparation materials provide users with three different versions, including a PDF version, a software version, and an online version. Although involved three versions of the FCP_FCT_AD-7.4 teaching content is the same, but for all types of users can realize their own needs, whether it is which version of FCP_FCT_AD-7.4 Learning Materials, believe that can give the user a better FCP_FCT_AD-7.4 learning experience. Below, I would like to introduce you to the main advantages of our research materials, and I'm sure you won't want to miss it.

SureTorrent also offers a demo of the Fortinet FCP_FCT_AD-7.4 exam product which is absolutely free. Up to 1 year of free FCP - FortiClient EMS 7.4 Administrator (FCP_FCT_AD-7.4) questions updates are also available if in any case the sections of the Fortinet FCP_FCT_AD-7.4 actual test changes after your purchase. Lastly, we also offer a full refund guarantee according to terms and conditions if you do not get success in the FCP - FortiClient EMS 7.4 Administrator Certification Exam after using our FCP_FCT_AD-7.4 product. These offers by SureTorrent save your time and money. Buy FCP - FortiClient EMS 7.4 Administrator (FCP_FCT_AD-7.4) practice material today.

Free PDF 2026 Fortinet FCP_FCT_AD-7.4: FCP - FortiClient EMS 7.4 Administrator –High Pass-Rate Real Testing Environment

Remember to fill in the correct mail address in order that it is easier for us to send our FCP_FCT_AD-7.4 study guide to you, therefore, this personal message is particularly important. We are selling virtual products, and the order of our FCP_FCT_AD-7.4 exam materials will be immediately automatically sent to each purchaser's mailbox according to our system. In the future, if the system updates, we will still automatically send the latest version of our FCP_FCT_AD-7.4 learning questions to the buyer's mailbox.

Fortinet FCP - FortiClient EMS 7.4 Administrator Sample Questions (Q34-Q39):

NEW QUESTION # 34

Which component or device shares ZTNA tag information through Security Fabric integration?

- A. FortiClient
- B. FortiGate Access Proxy
- C. FortiGate

Answer: C

Explanation:

FortiClient EMS is the component that shares ZTNA tag information through Security Fabric integration.

ZTNA tags are synchronized from FortiClient EMS as inputs for the FortiGate application gateway. They can be used in ZTNA policies as security posture checks to ensure certain security criteria are met. FortiClient EMS can share ZTNA tags across multiple devices in the Fabric, such as FortiGate, FortiManager, and FortiAnalyzer. FortiClient EMS can also share ZTNA tags across multiple VDOMs on the same FortiGate device. FortiClient EMS can be configured to control the ZTNA tag sharing behavior in the Fabric Devices settings¹.

FortiGate is the device that enforces ZTNA policies using ZTNA tags. FortiGate can receive ZTNA tags from FortiClient EMS via Fabric Connector. FortiGate can also publish ZTNA services through the ZTNA portal, which allows users to access applications without installing FortiClient. FortiGate can also provide ZTNA inline CASB for SaaS application access control².

FortiGate Access Proxy is a feature that enables FortiGate to act as a proxy for ZTNA traffic. FortiGate Access Proxy can be deployed in front of the application servers to provide ZTNA protection. FortiGate Access Proxy can also be deployed behind the application servers to provide ZTNA visibility. FortiGate Access Proxy can use ZTNA tags to identify and authenticate users and devices².

FortiClient is the endpoint software that connects to ZTNA services. FortiClient can register ZTNA tags with FortiClient EMS based on the endpoint security posture. FortiClient can also use ZTNA tags to access ZTNA services published by FortiGate. FortiClient can also use ZTNA tags to access SaaS applications with ZTNA inline CASB².

NEW QUESTION # 35

An administrator must deploy FortiClient for an organization that has BYOD and remote users.

What can the administrator use to deploy FortiClient? (Choose one answer)

- **A. Microsoft Intune**
- B. Group Policy Object (GPO)
- C. FortiClient zero-touch provisioning
- D. Microsoft System Center Configuration Manager (SCCM)

Answer: A

Explanation:

According to the FortiClient EMS Administrator Study Guide and the Fortinet Document Library (7.2/7.4 versions), the most effective method for deploying FortiClient to BYOD (Bring Your Own Device) and remote users is using Microsoft Intune (or other supported Mobile Device Management - MDM solutions).

1. Why Microsoft Intune (Answer C) is the Correct Choice:

* Cloud-Based Accessibility: Unlike GPO or SCCM, which traditionally require a direct connection to the local Active Directory (AD) domain or a VPN to reach the on-premises infrastructure, Microsoft Intune is a cloud-based MDM. This makes it the native choice for remote users who may not always be on the corporate network.

* BYOD Management: Intune is specifically designed to manage a variety of operating systems (Windows, macOS, iOS, Android) that are common in BYOD environments. It allows administrators to push the FortiClient installation package and enrollment configuration (such as the invitation_code or ems_server details) directly to the user's device via the cloud.

* Integration with EMS: FortiClient EMS 7.2/7.4 provides specific documentation for Intune Integration. Administrators can create a custom MSI or .pkg installer in EMS, upload it to Intune, and use Intune's app configuration policies to automate the Telemetry connection to EMS.

2. Why Other Options are Incorrect for this Scenario:

* A. FortiClient zero-touch provisioning: While FortiClient supports zero-touch provisioning (particularly for mobile or through FortiCloud), in the context of a "deployment tool" for an organization's broad BYOD and remote fleet, it is typically a feature or process facilitated by an MDM like Intune rather than the standalone deployment mechanism for the initial software package on third-party remote devices.

* B. Microsoft SCCM: SCCM (now part of Microsoft Configuration Manager) is heavily reliant on on-premises infrastructure and is generally used for corporate-owned, domain-joined devices. It is less flexible than Intune for managing "unmanaged" BYOD devices belonging to remote users.

* D. Group Policy Object (GPO): GPO requires the device to be joined to the Active Directory (AD) Domain. BYOD devices are typically not domain-joined, and remote devices cannot receive GPO updates unless they are connected via VPN at the time of the

policy refresh, making it unsuitable for this specific use case.

3. Curriculum References:

* EMS Administration Guide (Deployment Section): Specifies that for endpoints not reachable via AD

/Workgroups (which covers remote and BYOD), administrators should use the Installer Link method or an MDM (like Microsoft Intune).

* Intune Deployment Guide for FortiClient: Detail the specific use of Configuration Keys (e.g., cloud_invite_code, ems_server) that are passed from Intune to the FortiClient app to ensure that once the remote user installs the app, it automatically registers to the correct EMS instance.

NEW QUESTION # 36

Which component or device shares device status information through ZTNA telemetry?

- **A. FortiClient**
- B. FortiGate
- C. FortiClient EMS
- D. FortiGate Access Proxy

Answer: A

Explanation:

FortiClient communicates directly with FortiClient EMS to continuously share device status information through ZTNA telemetry.

NEW QUESTION # 37

An administrator is required to maintain a software vulnerability on the endpoints, without showing the feature on the FortiClient. What must the administrator do to achieve this requirement?

- A. Disable select the vulnerability scan feature in the deployment package
- B. Use the default endpoint profile
- **C. Click the hide icon on the vulnerability scan profile assigned to endpoint**
- D. Select the vulnerability scan feature in the deployment package, but disable the feature on the endpoint profile

Answer: C

Explanation:

* Requirement Analysis:

* The administrator needs to maintain a software vulnerability scan on endpoints without showing the feature on FortiClient.

* Evaluating Options:

* Disabling the feature in the deployment package or endpoint profile would remove the functionality entirely, which is not desired.

* Using the default endpoint profile may not meet the specific requirement of hiding the feature.

* Clicking the hide icon on the vulnerability scan profile assigned to the endpoint will keep the feature active but hidden from the user's view.

* Conclusion:

* The correct action is to click the hide icon on the vulnerability scan profile assigned to the endpoint (C).

NEW QUESTION # 38

In a FortiSandbox integration, what does the remediation option do?

- A. Wait for FortiSandbox results before allowing files
- **B. Alert and notify only**
- C. Exclude specified files
- D. Deny access to a file when it sees no results

Answer: B

Explanation:

* Understanding FortiSandbox Integration:

- * In a FortiSandbox integration, various remediation options are available for handling suspicious files.
 - * Evaluating Remediation Options:
 - * The remediation option for alerting and notifying without blocking access or waiting for results is essential to understand.
 - * Conclusion:
 - * The correct action for the remediation option in this context is to alert and notify only.
- References:
FortiSandbox integration documentation from the study guides.

NEW QUESTION # 39

.....

If you purchase our FCP_FCT_AD-7.4 practice materials, we believe that your life will get better and better. You may find a better job with a higher salary or your company will give you a promotion on your FCP_FCT_AD-7.4 certification. So why still hesitate? Act now, join us, and buy our FCP_FCT_AD-7.4 Study Materials. You will feel very happy that you will be about to change well because of our FCP_FCT_AD-7.4 study guide.
