ZDTA Study Guide: Zscaler Digital Transformation Administrator & ZDTA Practice Test & Zscaler Digital Transformation Administrator Learning Materials

A team of experts works hard for the Zscaler Certification Exam. To assist you in the objective of cracking the Zscaler ZDTA Exam, Zscaler ZDTA Dumps is offering a study material which comes in three versions and meets all needs of your exam preparation. Our product is available in Zscaler ZDTA Dumps PDF, a desktop Zscaler ZDTA dumps practice test, and a web-based Zscaler ZDTA dumps practice test.

Zscaler Digital Transformation Administrator Sample Questions (Q59-Q64):

NEW QUESTION # 59

Can URL Filtering make use of Cloud Browser Isolation?

- A. No. Cloud Browser Isolation is only a feature of Advanced Threat Defense.
- B. Yes. After blocking access to a site, the user can manually switch on isolation.
- C. Yes. Isolate is a possible Action for URL Filtering.
- D. No. Cloud Browser Isolation is a separate platform.

Answer: C

Explanation:

Yes, URL Filtering can make use of Cloud Browser Isolation. Specifically, "Isolate" is an available action in URL Filtering policies that enables users to access potentially risky or untrusted websites in an isolated environment, preventing any malicious content from reaching the user's device.

The study guide explains that integrating Cloud Browser Isolation into URL Filtering enhances security by isolating risky browsing activities directly from policy enforcement points.

NEW QUESTION # 60

What happens after the Zscaler Client Connector receives a valid SAML response from the Identity Provider (IdP)?

- A. The Zscaler Client Connector Portal authenticates the user directly.
- B. The SAML response is sent back to the user's device for local validation.
- C. Zscaler Internet Access validates the SAML response and returns an authentication token.
- D. There is no need for further actions as the SAML is valid, access is granted immediately.

Answer: C

Explanation:

After the Zscaler Client Connector (ZCC) receives a valid SAML response, Zscaler Internet Access (ZIA) takes over to validate the SAML assertion. Upon successful validation, ZIA issues an authentication token that allows the user to access services securely. This centralized validation ensures authentication integrity and enables seamless policy enforcement across Zscaler services.

NEW QUESTION # 61

Zscaler forwards the server SSL/TLS certificate directly to the user's browser session in which situation?

- A. When web traffic is on custom TCP ports.
- B. When traffic contains a known threat signature.
- C. When user has connected to server in the past.
- **D. When traffic is exempted in SSL Inspection policy rules.**

Answer: D

Explanation:

When a connection matches an SSL Inspection rule set to "bypass," Zscaler performs a passthrough, simply relaying the origin server's certificate intact to the client rather than substituting its own.

NEW QUESTION # 62

Which of the following are types of device posture?

- A. Domain Joined, Process Check, Deception Check
- B. Certificate Trust, File Path, Full Disk Encryption
- C. Detect CrowdStrike, CrowdStrike ZTA score, First name
- **D. Unauthorized Modification, OS Version, License Key**

Answer: D

Explanation:

Types of device posture typically include attributes that reflect the security and compliance status of a device.

This includes Unauthorized Modification, which checks if the device has unauthorized changes; OS Version, verifying if the operating system is up-to-date; and License Key, confirming the validity of software licenses on the device. These attributes help in assessing device trustworthiness for access control.

Other options include some irrelevant attributes such as "First name" or product-specific detections not generally categorized as device posture in Zscaler's framework.

NEW QUESTION # 63

How is the relationship between App Connector Groups and Server Groups created?

- **A. When a new Server Group is created it points to the App Connector Groups that provide visibility to this Server Group**
- B. Both App Connector Groups and Server Groups are linked together via the Data Center element
- C. The relationship between App Connector Groups and Server Groups is established dynamically in the Zero Trust Exchange as users try to access Applications
- D. When you create a new App Connector Group you must select the list of Server Groups to which it provides visibility

Answer: A

Explanation:

When you create a Server Group in the ZPA admin console (or via API/Infrastructure-as#Code), you explicitly select which App Connector Groups should serve that Server Group. Those connector groups are then used to advertise reachability and steer traffic to the included application servers.

NEW QUESTION # 64

.....

The practice materials of the exam with low quality may complicate matters of the real practice exam. So, you must know about our ZDTA question torrent. Our study material is not same as other dumps or study tools, it not only has good quality but also has cheap price. We have most professional team to compiled and revise ZDTA Exam Question, in order to try our best to help you pass the exam and get a better condition of your life and your work.
