

NCP-DB-6.10 Valid Test Test - NCP-DB-6.10 Valid Test Registration

P.S. Free & New NCP-DB-6.10 dumps are available on Google Drive shared by NewPassLeader: https://drive.google.com/open?id=19KSSivcNv-krbX3-RV82exVUj_WDVRyQ

In order to meet different needs for candidates, we offer you three versions for NCP-DB-6.10 exam cram, and you can choose the one you like. NCP-DB-6.10 PDF version is printable, and you can print them into hard one if you like, you can learn them anywhere and anyplace. NCP-DB-6.10 Soft test engine can stimulate the real exam environment, so that you can know the process of the exam, and your confidence will be strengthened. NCP-DB-6.10 Online Test engine support Android and iOS etc. You can have a general review since this version has testing history and performance review. All three versions have free update for one year, and the update version will be sent to you automatically.

There is a high demand for Nutanix Development certification, therefore there is an increase in the number of Nutanix NCP-DB-6.10 exam candidates. Many resources are available on the internet to prepare for the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 exam. NewPassLeader is one of the best certification exam preparation material providers where you can find newly released Nutanix NCP-DB-6.10 Dumps for your exam preparation. With years of experience in compiling top-notch relevant Nutanix NCP-DB-6.10 dumps questions, we also offer the Nutanix NCP-DB-6.10 practice test (online and offline) to help you get familiar with the actual exam environment.

Quiz Nutanix - NCP-DB-6.10 - Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 High Hit-Rate Valid Test Test

It can be said that all the content of the NCP-DB-6.10 study materials are from the experts in the field of masterpieces, and these are understandable and easy to remember, so users do not have to spend a lot of time to remember and learn. It takes only a little practice on a daily basis to get the desired results. Especially in the face of some difficult problems, the user does not need to worry too much, just learn the NCP-DB-6.10 Study Materials provide questions and answers, you can simply pass the exam.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q10-Q15):

NEW QUESTION # 10

When provisioning Microsoft SQL Server utilizing database groups, which statement is true?

- A. Databases within a database group can share multiple Time Machine configurations.
- B. NDB supports one database group per database server VM or database server cluster
- C. Databases within a database group must be all of the same size.
- D. Microsoft recommends 35 databases within a single database group.

Answer: A

Explanation:

In NDB, database groups are used to manage multiple Microsoft SQL Server databases collectively, enabling centralized administration and protection policies. The statement

"Databases within a database group can share multiple Time Machine configurations" is true. A Time Machine in NDB manages snapshots and log backups for recovery, and a database group can be associated with multiple Time Machine configurations to support different retention policies or recovery point objectives (RPOs) for the databases within the group. This flexibility allows tailored data protection strategies.

NEW QUESTION # 11

Which two statements best describe the features and functionality of Era Oracle patching?

(Choose two.)

- A. Era does not require native Oracle Utility OpatchAuto to create the patch profile,
- B. Era Oracle fleet patching can be rolled back if issues are encountered after successful patching.
- C. Era patching for Oracle databases has automatic rollback if any of the steps in the patching workflow fails.
- D. Era patching can be automated using REST API/CLI for scheduled patching many Oracle servers in a fleet patching scenario,

Answer: C,D

Explanation:

Nutanix Era provides a unified database operating model that delivers simplicity, performance, availability, and security across private and public clouds. It standardizes your Oracle database ecosystem by mass patching the databases with one-click simplicity. This includes the following features:

Automated Patching: Era patching can be automated using REST API/CLI for scheduled patching many Oracle servers in a fleet patching scenario. This allows for the standardization of your Oracle database ecosystem by mass patching the databases with one-click simplicity. **Automatic Rollback:** Era patching for Oracle databases has automatic rollback if any of the steps in the patching workflow fails. This ensures that your databases remain secure and functional even if an issue arises during the patching process.

NEW QUESTION # 12

An administrator has deployed an NDB HA setup. An electrical maintenance window needs to be planned and the clusters where NDB is deployed must be powered off. After shutting down the load balancer server, what should the administrator do next?

- A. Shutdown the API standby node.
- B. In the sudo systemctl stop patroni command.
- C. Run the high-availability list command.
- D. Shutdown the API leader node.

Answer: A

Explanation:

In an NDB HA (High Availability) setup, when planning an electrical maintenance window requiring the clusters hosting NDB to be powered off, the administrator must follow a controlled shutdown sequence to preserve data integrity and minimize disruption. After shutting down the load balancer server (HAProxy), the next step is to shut down the API standby node. In an NDB HA configuration, the API leader node handles active operations, while the standby node provides redundancy. Shutting down the standby node first ensures the leader remains operational, allowing ongoing management tasks to continue until the final shutdown of the leader node.

NEW QUESTION # 13

An administrator needs to assign a static IP address to the NDB VM using the command, shown below.

```
era-server > era server set ip=ip_address gateway=gatevay_address netmask=ip_J2etmas
```
