Cisco 300-720 Exam is designed to evaluate the knowledge and skills of professionals in securing email with the Cisco Email Security Appliance (ESA). 300-720 exam covers a wide range of topics, including configuring and deploying the ESA, implementing email authentication and encryption, investigating and quarantining email threats, and managing the ESA system. Securing Email with Cisco Email Security Appliance certification is intended for security professionals, network administrators, and engineers who are responsible for securing email systems in their organizations.

## Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q141-Q146):

### NEW QUESTION # 141

An engineer is testing mail flow on a new Cisco ESA and notices that messages for domain abc.com are stuck in the delivery queue. Upon further investigation, the engineer notices that the messages pending delivery are destined for 192.168.1.11, when they should instead be routed to 192.168.1.10.

What configuration change needed to address this issue?

- A. Modify the Routing Tables and add a route for IP address to 192.168.1.10.
- B. Modify Destination Controls entry for the domain abc.com .
- C. Add an address list for domain abc.com .
- D. Modify the SMTP route for the domain and change the IP address to 192.168.1.10.

**Answer: D**

Explanation:

Reference: <https://www.cisco.com/c/en/us/support/docs/security/email-security-appliance/118136-qanda-esa-00.html>

You can use the SMTP route feature on Cisco ESA to specify how messages for a specific domain are routed to their destination. You can modify the SMTP route for the domain abc.com and change the IP address to 192.168.1.10 to ensure that messages are delivered correctly. ### NEW QUESTION # 142

A content dictionary was created for use with Forged Email Detection. Proper data that pertains to the CEO Example CEO: <ceo@example.com> must be entered. What must be added to the dictionary to accomplish this goal?

- A. example.com
- B. Example CEO
- C. ceo

- D. ceo@example.com

**Answer: D**

Explanation:

ceo@example.com is the data that must be added to the dictionary to accomplish this goal. A content dictionary is a list of values that can be used as a condition in a content filter or a message filter. Forged Email Detection is a feature that allows Cisco ESA to detect and prevent email spoofing attacks, where the sender's address or domain is forged to appear as someone else, such as the CEO of the organization.

To create a content dictionary for use with Forged Email Detection on Cisco ESA, the administrator can follow these steps:

Select Mail Policies > Content Dictionaries and click Add Dictionary.

Enter a name and description for the content dictionary, such as CEO Email.

Under Dictionary Values, click Add Value.

Enter the email address of the CEO, such as ceo@example.com.

Click Submit.

**NEW QUESTION # 143**

Which two query types are available when an LDAP profile is configured? (Choose two.)

- A. routing
- B. proxy consolidation
- C. user
- D. recursive
- E. group

**Answer: A,E**

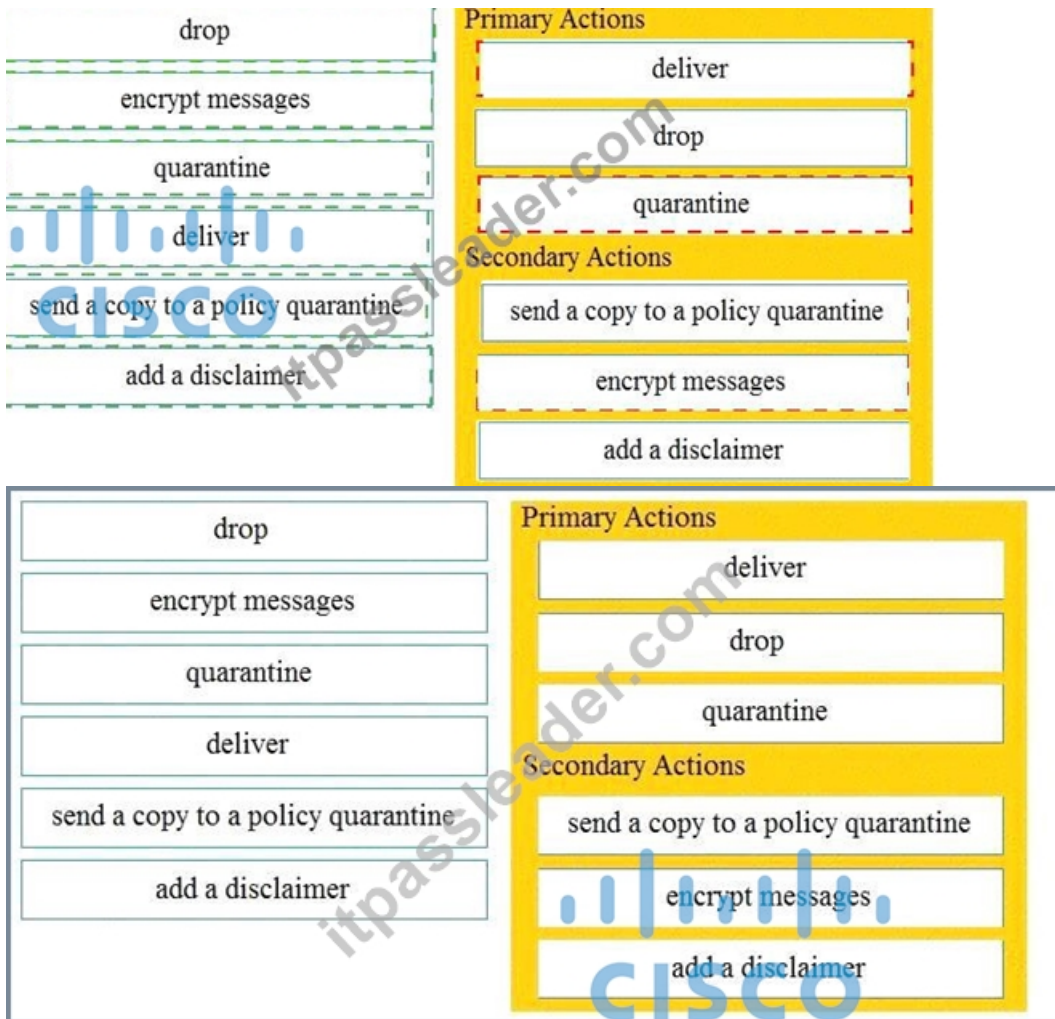

**NEW QUESTION # 144**

Drag and drop the Cisco ESA reactions to a possible DLP from the left onto the correct action types on the right.

drop	
encrypt messages	
quarantine	
deliver	
send a copy to a policy quarantine	
add a disclaimer	

**Answer:**
