## Reliable NetSec-Analyst Test Bootcamp & NetSec-Analyst Examcollection Vce

With many advantages such as immediate download, simulation before the real exam as well as high degree of privacy, our NetSec-Analyst actual exam survives all the ordeals throughout its development and remains one of the best choices for those in preparation for NetSec-Analyst Exam. Many people have gained good grades after using our NetSec-Analyst real dumps, so you will also enjoy the good results. Don't hesitate any more. Time and tide wait for no man. Come and buy our NetSec-Analyst exam questions!

## Palo Alto Networks Network Security Analyst Sample Questions (Q223-Q228):

### NEW QUESTION # 223

Given the screenshot, what are two correct statements about the logged traffic? (Choose two.)

□

- A. The traffic was denied by security profile.
- B. The web session was unsuccessfully decrypted.
- C. The traffic was denied by URL filtering.
- D. The web session was decrypted.

**Answer: D**

### NEW QUESTION # 224

A company moved its old port-based firewall to a new Palo Alto Networks NGFW 60 days ago. Which utility should the company use to identify out-of-date or unused rules on the firewall?

- A. Rule Usage Filter >Hit Count > Unused in 30 days

- B. Rule Usage Filter > Hit Count > Unused in 90 days
- C. Rule Usage Filter > No App Specified
- D. Rule Usage Filter > Unused Apps

**Answer: B**

#### NEW QUESTION # 225

What are three valid source or D=destination conditions available as Security policy qualifiers? (Choose three.)

- A. Address
- B. Service
- C. User
- D. Zone ab
- E. Application

**Answer: C,D,E**

Explanation:

Three valid source or destination conditions available as Security policy qualifiers are User, Application, and Zone. These qualifiers allow you to define the match criteria for a Security policy rule based on the identity of the user, the application used, and the zone where the traffic originates or terminates. You can use these qualifiers to enforce granular security policies that control access to network resources and prevent threats<sup>1</sup>.

Some of the characteristics of these qualifiers are:

User: The User qualifier allows you to specify the source or destination user or user group for a Security policy rule. The firewall can identify users based on various methods, such as User-ID, Captive Portal, or GlobalProtect. You can use the User qualifier to apply different security policies for different users or user groups, such as allowing access to certain applications or resources based on user roles or privileges<sup>2</sup>.

Application: The Application qualifier allows you to specify the application or application group for a Security policy rule. The firewall can identify applications based on App-ID, which is a technology that classifies applications based on multiple attributes, such as signatures, protocol decoders, heuristics, and SSL decryption. You can use the Application qualifier to allow or deny access to specific applications or application groups, such as enabling web browsing but blocking social networking or file sharing<sup>3</sup>.

Zone: The Zone qualifier allows you to specify the source or destination zone for a Security policy rule. A zone is a logical grouping of one or more interfaces that have similar functions or security requirements. The firewall can apply security policies based on the zones where the traffic originates or terminates, such as intrazone, interzone, or universal. You can use the Zone qualifier to segment your network and isolate traffic based on different trust levels or network functions<sup>4</sup>.

#### NEW QUESTION # 226

Which feature enables an administrator to review the Security policy rule base for unused rules?

- A. Test Policy Match
- B. View Rulebase as Groups
- C. Security policy tags eb
- D. Policy Optimizer

**Answer: D**

Explanation:

Policy Optimizer provides a simple workflow to migrate your legacy Security policy rulebase to an App-ID based rulebase, which improves your security by reducing the attack surface and gaining visibility into applications so you can safely enable them. Policy Optimizer can also identify unused rules, duplicate rules, and rules that can be merged or reordered to optimize your rulebase. You can use Policy Optimizer to review the usage statistics of your rules and take actions to clean up or modify your rulebase as needed<sup>1</sup>. ### NEW QUESTION # 227

All users from the internal zone must be allowed only Telnet access to a server in the DMZ zone. Complete the two empty fields in the Security Policy rules that permits only this type of access.

Choose two.

- A. Application = "Telnet"
- B. Application = "any"
- C. Service = "application-default"
- D. Service = "any"

Answer: A,C

### NEW QUESTION # 228

.....

Under the tremendous stress of fast pace in modern life, this version of our NetSec-Analyst test prep suits office workers perfectly. It can match your office software and as well as help you spare time practicing the NetSec-Analyst exam. As for its shining points, the PDF version can be readily downloaded and printed out so as to be read by you. It's really a convenient way for those who are fond of paper learning. With this kind of version, you can flip through the pages at liberty and quickly finish the check-up NetSec-Analyst Test Prep. What's more, a sticky note can be used on your paper materials, which help your further understanding the knowledge and review what you have grasped from the notes. While you are learning with our NetSec-Analyst quiz guide, we hope to help you make out what obstacles you have actually encountered during your approach for NetSec-Analyst exam torrent through our PDF version, only in this way can we help you win the NetSec-Analyst certification in your first attempt.
