질문 # 30

Which of the following can you use to determine a stage sequence in a forwarding order? Note: There are 2 correct answers to this question.

- A. Movement type
- B. Stage profile
- C. Shipping type
- D. Stage type

정답: A,B

설명:

In SAP S/4HANA Transportation Management for LSPs, the stage sequence in a forwarding order defines the transportation legs (e.g., pre-carriage, main carriage). According to the SAP documentation, the stage sequence can be determined using:

* Stage profile (A): A stage profile defines the sequence of stages for a forwarding order based on predefined rules, ensuring consistency across similar orders.

* Movement type (C): Movement types specify the type of transport (e.g., road, rail) for each stage and are used to determine the stage sequence in forwarding orders.

The other options are incorrect:

* Stage type (B) defines attributes of individual stages but does not determine the sequence.

* Shipping type (D) categorizes the overall transport mode but does not control stage sequencing.
