JN0-106 New Dumps Free - JN0-106 Reliable Exam Papers

Our JN0-106 study guide is known as instant download, once you finish your payment, we will send the downloading link and password to you, and you can get JN0-106 study guide within ten minutes. If you don't receive them, please contact our service staff, they will solve the problem for you. Furthermore, JN0-106 Study Guide includes the questions and answers, and you can get enough practice through them.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q48-Q53):

NEW QUESTION # 48

You have logged on to a Junos device and are at the operational mode prompt. Which two commands are used at this prompt? (Choose two.)

- A. show interface ge-0/0/0
- B. run show interface terse
- C. set interface ge-0/0/0 unit 0 family inet
- D. request system shutdown

Answer: A,D

Explanation:

At the operational mode prompt on a Junos device, you can use various commands to view the device's status and request system operations. The show interface ge-0/0/0 command is used to display information about a specific interface, while the request system shutdown command is used to properly shut down the device. The request system shutdown is a valid operational mode command to gracefully shut down the device.

NEW QUESTION # 49

You received a new Junos device and are configuring the system-related settings. You must configure this device for the current date and time on the US West coast. You have set the time zone to America/Los_Angeles, however the time and date did not change. In this scenario, which two additional actions would satisfy this requirement? (Choose two.)

- A. Configure a DNS server.
- B. Reboot the device.
- C. Set the date and time setting manually.
- D. Configure an NTP server.

Answer: C,D

Explanation:

When configuring the system-related settings for the current date and time on a Junos device, especially for a specific time zone like America/Los_Angeles, and the time does not automatically adjust, two effective actions can be taken. Firstly, setting the date and time manually allows for immediate correction of the system clock. This can be done via the CLI with the appropriate set date and time command. Secondly, configuring the device to use an NTP server can provide ongoing synchronization with an accurate time source, ensuring that the device maintains the correct time and date automatically in the future, even in the case of restarts or minor drifts in the internal clock.

NEW QUESTION # 50

Referring to the exhibit.

```
[edit]
root# set system host-name TEST_DEVICE
[edit]
root# commit
[edit]
'system'
Missing mandatory statement: 'root-authentication'
error: commit failed: (missing mandatory statements)
[edit]
root#
```

You are configuring a new device. Which action solves the error shown in the exhibit?

- A. loading the factory-default configuration
- B. configuring a password for the root account
- C. reinstalling Junos
- D. configuring a non-root username and password

Answer: B

Explanation:

The error message in the exhibit indicates that the root-authentication statement is missing, which is mandatory for committing the configuration. In Junos OS, it is required to set a password for the root account to commit any configuration changes. This is a security measure to ensure that unauthorized users cannot access the device's configuration mode. To solve the error shown in the exhibit, configuring a password for the root account is necessary. This can be done by using the set system root-authentication plain-text-password command, after which the user will be prompted to enter a new password for the root account.

NEW QUESTION # 51

Which two external authentication methods does Junos support for administrative access?

(Choose two.)

- A. ACE
- **B. TACACS+**
- C. NIS
- **D. RADIUS**

Answer: B,D

Explanation:

Junos OS supports several external authentication methods for administrative access, with TACACS+ (Terminal Access Controller Access-Control System Plus) and RADIUS (Remote Authentication Dial-In User Service) being among the most commonly used. Both TACACS+ and RADIUS are protocols that allow network devices to communicate with a central authentication server, enabling centralized control over user authentication and authorization. This centralization simplifies the management of user credentials and access policies, especially in larger networks with multiple devices.

NEW QUESTION # 52

Which two statements are correct about a Routing Engine? (Choose two.)

- A. It processes CoS marked traffic.
- **B. It maintains routing tables.**
- **C. It processes management traffic.**
- D. It forwards transit traffic.

Answer: B,C

Explanation:

The Routing Engine (RE) in Juniper Networks devices plays a pivotal role in the control plane, handling tasks that are critical for the operation and management of the network. One of its key functions is processing management traffic, which includes user commands, system configuration, and monitoring operations. The RE also maintains routing tables, which are essential for network routing decisions. These tables contain network topology information and routing paths, which the RE uses to update the Packet Forwarding Engine (PFE) so that it can forward packets appropriately. The RE does not forward transit traffic or process Class of Service (CoS) marked traffic, as these tasks are handled by the PFE.

NEW QUESTION # 53

.....

By keeping customer satisfaction in mind, ITEXamSimulator offers you a free demo of the Junos, Associate (JNCIA-Junos) (JN0-106) exam questions. As a result, it helps you to evaluate the Junos, Associate (JNCIA-Junos) (JN0-106) exam dumps before making a purchase.
