Adobe Experience Manager Architect Master Sample Questions (Q16-Q21):

NEW QUESTION # 16

A media company wants to use AEM as content hub for multiple customer touch points:

- * Brand-specific marketing websites hosted on AEM Sites
- * Single Page Applications using headless content
- * Native mobile applications
- * Content offers in Adobe Target

The company wants to manage its content efficiently with its small editor staff. Text should be entered and reviewed only once, then reused for all touch points.

How should an Architect incorporate these requirements into a solution that leverages AEM Sites features?

A)

B)

C)

D)

- A. Option B
- B. Option C
- C. Option D
- D. Option A

Answer: A

Explanation:

AEM content fragments are pure content with structured data that can be used to describe and manage content for multiple channels¹²³. Content fragments can be exposed as JSON via AEM Content Services and API Pages for headless delivery⁴. Content fragments can also be used in AEM Sites pages with different layouts and designs using the style system⁵. Option B is the only diagram that shows how content fragments can be created and reused for all touch points using AEM Sites features.

NEW QUESTION # 17

A client was successfully moved from AEM 6.5 to AEM as a Cloud Service (AEMaaCS) environment. The Content Transfer Tool was used to transfer the content to the AEMaaCS environment. The developed components render different renditions based on the breakpoint of the pages. The users reported that newly uploaded assets are not rendering or missing.

What is the cause of this issue and how can it be resolved?

- A. The Asset Update workflow is not compatible with AEMaaCS. The solution is to rewrite the workflow to use the new APIs in the AEM SDK.
- B. The Asset Update workflow was not migrated properly to the new AEMaaCS instance. The solution is to migrate the /var path and the workflow models using the Content Transfer Tool.
- C. The Asset Update workflow is not compatible with AEMaaCS. The solution is to use AEM Processing profiles to create the missing renditions.
- D. The Asset Update workflow was not migrated properly to the new AEMaaCS instance. The solution is to make sure that the workflow is present in the codebase.

Answer: C

NEW QUESTION # 18

Refer to the exhibit.

A customer with an existing AEM implementation wants to enrich product pages with technical data coming from their PIM system. The PIM system sits behind an API Management solution that publicly exposes the PIM API's as RESTful web services with basic authentication as the security mechanism. Data consistency with the PIM and secure access to the APIs are key elements of the integration.

How should the Architect set up the integration between AEM and the PIM?

- A. Integrate the AEM Publishers directly with the API Management solution
- B. Import the technical data into the AEM Author and replicate to Publishers
- C. Convert the technical data to Content Fragments and expose using Content Services
- D. Use a client-side integration with AJAX from the browser to the API Management

Answer: A

Explanation:

Integrate the AEM Publishers directly with the API Management solution. According to Adobe Experience Manager documentation¹, a direct integration between AEM and PIM can enable marketers and creative professionals to manage eCommerce-related product data and photography within AEM. A direct integration can also ensure data consistency with the PIM and secure access to the APIs using basic authentication²³. Option A is the only diagram that shows how AEM Publishers can directly communicate with the API Management solution.

NEW QUESTION # 19

A client using AEM 6.5 on-premise is experiencing an unsustainable repository growth of 100Gb a day. After investigation, an Architect finds out that the DAM is causing this issue. Each image uploaded to the DAM triggers the creation of approximately 100 renditions, necessary by business to consume in different channels and systems. The client also complains about stale content reported by site visitors happening randomly in pages where article-related components are present.

How should the Architect address these issues?

- A. Split WCM and DAM in separate instances, set up Connected Assets, and implement a workflow to purge all pages affected by an article change in Dispatcher
- B. Leverage AEM Adaptive Image Servlet, cache image variations in Dispatcher, and reimplement article-related components to use AJAX to load the content
- C. Leverage AEM Adaptive Image Servlet cache image variations in Dispatcher, and implement a cache TTL in Dispatcher
- D. Split WCM and DAM in separate instances, set up Connected Assets, and re-implement article-related components to use AJAX to load the content

Answer: B

Explanation:

According to Adobe Experience Manager documentation¹, the Adaptive Image Servlet is a feature that automatically selects the most appropriate rendition of an image asset based on the size of the container in which it is displayed. This can reduce the number of renditions needed and improve performance and scalability of AEM DAM. Caching image variations in Dispatcher can also help reduce repository growth and network traffic. Reimplementing article-related components to use AJAX can prevent stale content

issues by dynamically loading fresh content from AEM without refreshing the whole page.

NEW QUESTION # 20

A customer wants to migrate their AEM environment from an on-premise infrastructure to a public cloud to improve performance. The customer currently hosts many assets (images, videos, documents) in the DAM.

Approximately 10 business users frequently upload new assets and update existing assets. Editors then use these assets on the sites. What should an Architect do as part of this migration?

- A. Run online revision cleanup before moving to the new storage format
- B. Set up a horizontally scalable AEM environment on MongoDB
- C. Set up Connected Assets to share the DAM assets in the sites
- D. Move to a shared datastore and enable binary less replication

Answer: A
