Get Excellent Scores in Exam with CheckPoint 156-215.82 Questions

The client only needs 20-30 hours to learn our 156-215.82 learning questions and then they can attend the test. Most people may devote their main energy and time to their jobs, learning or other important things and can't spare much time to prepare for the test. But if clients buy our 156-215.82 Training Materials they can not only do their jobs or learning well but also pass the test smoothly and easily because they only need to spare little time to learn and prepare for the 156-215.82 test.

CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q52-Q57):

NEW QUESTION # 52
Which Threat Prevention profile uses sanitization technology?

- A. perimeter
- B. Guest Network
- C. Sandbox
- D. Cloud/data Center

Answer: A

Explanation:
Threat Prevention is a comprehensive solution that protects networks from malicious attacks by using multiple security blades, such as Anti-Bot, Anti-Virus, IPS, Threat Emulation, and Threat Extraction. A Threat Prevention profile defines the actions and settings for each blade and can be applied to different network segments or scenarios. The Perimeter profile is one of the predefined profiles that uses sanitization technology to protect users from malicious files and links. Sanitization technology includes Threat Emulation and Threat Extraction blades, which can detect and remove malware from files and web content. NEW QUESTION # 53
In R80 Management, apart from using SmartConsole, objects or rules can also be modified using:

- A. A complete CLI and API interface using SSH and custom CPCode integration.
- B. 3rd Party integration of CLI and API for Gateways prior to R80.
- C. 3rd Party integration of CLI and API for Management prior to R80.
- D. A complete CLI and API interface for Management with 3rd Party integration.

Answer: A

Explanation:
In R80 Management, apart from using SmartConsole, objects or rules can also be modified using a complete CLI and API interface using SSH and custom CPCode integration. This allows you to automate tasks, integrate with third-party tools, and create custom scripts . 3rd Party integration of CLI and API for Gateways or Management prior to R80 is not relevant for R80 Management. A complete CLI and API interface for Management with 3rd Party integration is not a specific option. NEW QUESTION # 54
Most Check Point deployments use Gaia but which product deployment utilizes special Check Point code (with unification in R81.10)?

- A. Rugged Appliances
- B. Small Business and Branch Office Appliances
- C. Scalable Platforms
- D. Enterprise Network Security Appliances

Answer: C

Explanation:
Most Check Point deployments use Gaia, which is a unified operating system for all Check Point appliances, open servers, and virtualized gateways. However, some product deployments utilize special Check Point code, such as Scalable Platforms (formerly known as Maestro), which are high-performance security gateways that can scale up to 1.5 Tbps of firewall throughput.Scalable Platforms use a special version of Gaia OS called Gaia Embedded, which is planned to be unified with Gaia OS in R81.102. NEW QUESTION # 55

What is the purpose of a Clean-up Rule?

- A. Used to better optimize a policy.
- B. Provide a metric for determining unnecessary rules.
- C. To drop any traffic that is not explicitly allowed.
- D. Clean-up Rules do not server any purpose.

Answer: C

Explanation:

A clean-up rule is a rule that is placed at the end of the security policy to drop any traffic that is not explicitly allowed by the previous rules.It is a best practice to have a clean-up rule to prevent unauthorized access and log the dropped packets for analysis12. The other options are not the purpose of a clean-up rule. Clean-up Rule,Check Point CCSA - R81: Practice Test & Explanation

NEW QUESTION # 56

To enforce the Security Policy correctly, a Security Gateway requires:

- A. a routing table
- B. a Demilitarized Zone
- C. awareness of the network topology
- D. a Security Policy install

Answer: C

Explanation:

To enforce the Security Policy correctly, a Security Gateway requires awareness of the network topology. This means that the gateway knows which networks and interfaces are internal and external, and how to route packets between them .
