Are you worried about insufficient time to prepare the exam? Do you have a scientific learning plan? Maybe you have set a series of to-do list, but it's hard to put into practice for there are always unexpected changes during the IDP exam. Here we recommend our IDP test prep to you. With innovative science and technology, our study materials have grown into a powerful and favorable product that brings great benefits to all customers. We are committed to designing a kind of scientific study material to balance your business and study schedule. With our IDP Exam Guide, all your learning process includes 20-30 hours.

## CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Domain Security Assessment: Focuses on domain risk scores, trends, matrices, severity</li> <li>likelihood</li> <li>consequence factors, risk prioritization, score reduction, and configuring security goals and scopes.</li> </ul>

Topic 3	<ul style="list-style-type: none"> <li>• Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling</li> <li>• disabling rules, applying changes, and required Falcon roles.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• User Assessment: Examines user attributes, differences between users</li> <li>• endpoints</li> <li>• entities, risk baselining, risky account types, elevated privileges, watchlists, and honeypot accounts.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>• Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom</li> <li>• templated</li> <li>• scheduled workflows, branching logic, and loops.</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>• GraphQL API: Covers Identity API documentation, creating API keys, permission levels, pivoting from Threat Hunter to GraphQL, and building queries.</li> </ul>
Topic 9	<ul style="list-style-type: none"> <li>• Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.</li> </ul>
Topic 10	<ul style="list-style-type: none"> <li>• Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.</li> </ul>

Successful people are those who never stop advancing. They are interested in new things and making efforts to achieve their goals. If you still have dreams and never give up, you just need our IDP actual test guide to broaden your horizons and enrich your experience; Our IDP question materials are designed to help ambitious people. The nature of human being is pursuing wealth and happiness. Perhaps you still cannot make specific decisions. It doesn't matter. We have the free trials of the IDP Study Materials for you. The initiative is in your own hands.

## CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q53-Q58):

NEW QUESTION # 53

The screenshot shows the 'Assets' tab for user Carol Carson. The table lists the following endpoints:

Endpoint Name	IP Address	Owner	Last Activity
CCARSON_DT	10.10.10.10	Owner	Fri, Nov 19th 2021
CCARSON_LAPT	10.10.10.10	Owner	Fri, Nov 12th 2021
ETIS-WS03	172.16.0.88		an hour ago
ETIS-TS01	10.10.10.10		Fri, Nov 19th 2021

Which of the following BEST indicates that this user has an established baseline?

- A. The user was found logging into five endpoints
- B. The user has recent logon activity on ETIS-WS03
- C. The user has endpoints that they are considered owners of
- D. The user has a risk score of 6.4

**Answer: C**

**Explanation:**

In Falcon Identity Protection, a user baseline is established by observing consistent and repeatable behavior over time, including authentication patterns, endpoint associations, and usage context. According to the CCIS curriculum, one of the strongest indicators that a user has an established baseline is the presence of endpoints for which the user is identified as an owner.

Endpoint ownership is determined through historical authentication behavior and usage frequency. When Falcon identifies that a user consistently logs into specific endpoints over time, those endpoints are marked as owned, which signifies that sufficient historical data exists to confidently model the user's normal behavior.

This ownership relationship is only created after Falcon has observed the user long enough to establish a reliable baseline.

The other options do not definitively indicate a baseline:

\* Logging into multiple endpoints may occur during initial discovery or anomalous activity.

\* A risk score reflects current risk posture, not baseline maturity.

\* Recent logon activity alone does not imply historical consistency.

Because endpoint ownership requires sustained, predictable behavior over time, it is the clearest indicator that Falcon has successfully established a user baseline. Therefore, Option C is the correct and verified answer.

#### NEW QUESTION # 54

Which entity tab will show an administrator how to lower the account's risk score?

- A. Asset
- B. Timeline
- C. Activity
- D. Risk

**Answer: D**

**Explanation:**

In CrowdStrike Falcon Identity Protection, the Risk tab within a user or account entity provides administrators with direct visibility into why an account has a specific risk score and what actions can be taken to reduce that score. This functionality is a core component of the User Assessment and Risk Assessment sections of the CCIS (CrowdStrike Identity Specialist) curriculum.

The Risk tab aggregates both analysis-based risks and detection-based risks, clearly identifying contributing factors such as compromised passwords, excessive privileges, risky authentication behavior, stale or never-used accounts, and policy violations. It also highlights the severity, likelihood, and consequence of each risk factor, allowing administrators to prioritize remediation efforts effectively. Most importantly, this tab provides actionable guidance, enabling teams to understand which specific remediation steps-

such as enforcing MFA, resetting credentials, reducing privileges, or disabling unused accounts-will directly lower the account's overall risk score.

Other entity tabs do not provide this capability. The Timelinetab focuses on chronological events and detections, the Activitytab displays authentication and behavioral activity, and the Assetstab shows associated endpoints and resources. Only the Risktab is designed to explain risk drivers and guide remediation, making Option D the correct and verified answer.

### NEW QUESTION # 55

Within Domain Security Overview, what Goal incorporates all risks into one security assessment report?

- A. Reduce Attack Surface
- B. AD Hygiene
- C. Pen Testing
- D. Privileged User Management

**Answer: A**

Explanation:

Within the Domain Security Overview, Goals are used to tailor how identity risks are grouped, evaluated, and reported. The Reduce Attack Surface goal is the only option that incorporates all identity risks into a single, comprehensive security assessment.

The CCIS curriculum explains that Reduce Attack Surface provides a holistic view of identity exposure by aggregating risks related to authentication paths, account hygiene, privileges, misconfigurations, and legacy identity weaknesses. This goal is designed for organizations seeking an overall understanding of their identity security posture rather than focusing on a specific domain such as privileged users or directory hygiene.

Other goals are more specialized:

\* AD Hygiene focuses on directory configuration issues.

\* Privileged User Management concentrates on high-privilege identities.

\* Pen Testing aligns more with adversarial simulation than continuous risk assessment.

Reduce Attack Surface aligns directly with Zero Trust principles, helping organizations identify and eliminate unnecessary identity access paths. Therefore, Option C is the correct and verified answer.

### NEW QUESTION # 56

Within the Falcon Identity Protection portal, which page allows you to enable/disable Policy Rules?

- A. Configure
- B. Policy Enforcement
- C. Enforce
- D. Identity-Based Detections

**Answer: C**

Explanation:

In Falcon Identity Protection, Policy Rules are managed within the Enforce section of the portal. The CCIS documentation explains that Enforce is the operational area where administrators create, enable, disable, and manage Policy Rules and Policy Groups.

This section is specifically designed for identity enforcement logic, allowing security teams to activate or suspend rules without modifying underlying configurations or analytics. Enabling or disabling a Policy Rule immediately affects how identity conditions are enforced across the environment.

Other sections serve different purposes:

Configure manages connectors, domains, subnets, and risk settings.

Identity-Based Detections is used for investigation and monitoring.

Policy Enforcement is not a standalone navigation section in Falcon Identity Protection.

Because rule activation and enforcement control reside exclusively in Enforce, Option B is the correct and verified answer.

### NEW QUESTION # 57

When creating an API key, which scope should be selected to retrieve Identity Protection detection and incident information?

- A. Identity Protection Data
- B. Identity Protection Incidents

- C. Identity Protection Detections
- D. Identity Protection Assessment

**Answer: C**

Explanation:

To retrieve identity-based detections and incident-related data using the CrowdStrike APIs, the API key must include the correct permission scope. According to the CCIS curriculum, the Identity Protection Detections scope is required to access identity-based detection and incident information through GraphQL.

This scope allows API queries to retrieve:

- \* Identity-based detections
- \* Associated incident metadata
- \* Detection attributes such as severity, status, and related entities

Incident data in Falcon Identity Protection is derived from detections, making the Detections scope the authoritative permission set for this information. Without this scope, GraphQL queries related to identity detections and incidents will fail authorization.

The other scopes are either too narrow or unrelated to detection retrieval. Therefore, Option A is the correct and verified answer.

## NEW QUESTION # 58

.....

Now we can say that CrowdStrike Certified Identity Specialist (CCIS) Exam (IDP) exam questions are real and top-notch CrowdStrike IDP exam questions that you can expect in the upcoming CrowdStrike Certified Identity Specialist (CCIS) Exam (IDP) exam. In this way, you can easily pass the IDP exam with good scores. The countless IDP Exam candidates have passed their dream IDP certification exam and they all got help from real, valid, and updated IDP practice questions, You can also trust on Dumps Tests and start preparation with confidence.
