

# Certification DA0-002 Exam Infor - Reliable DA0-002 Exam Testking

P.S. Free 2026 CompTIA DA0-002 dumps are available on Google Drive shared by ActualPDF: <https://drive.google.com/open?id=1Ucw-PIQqobXeouuRhVFXU-a6pUeA6ZTv>

Almost everyone is trying to get the CompTIA DA0-002 certification to update their CV or get the desired job. Every student faces just one problem and that is not finding updated study material. Applicants are always confused about where to buy real CompTIA DA0-002 Dumps Questions and prepare for the CompTIA Data+ Exam (2025) (DA0-002) exam in less time. Nowadays everyone is interested in getting the CompTIA Data+ Exam (2025) (DA0-002) certificate because it has multiple benefits for CompTIA career.

The pressure is not terrible, and what is terrible is that you choose to evade it. You clearly have seen your own shortcomings, and you know that you really should change. Then, be determined to act! Buying our DA0-002 exam questions is the first step you need to take. And as long as you study with our DA0-002 Practice Guide, you will find that the exam is just a piece of cake and the certification is easy to get. With the certification, you will find your future is much brighter.

## Reliable DA0-002 Exam Testking, DA0-002 Test Price

Are you considering the questions that how you can pass the DA0-002 exam and get a certificate? The best answer is to download and learn our DA0-002 quiz torrent. Our DA0-002 exam questions will help you get what you want in a short time. You just need little time to download and install it after you purchase our DA0-002 training prep, then you just need spend about 20~30 hours to learn it. We are glad that you are going to spare your precious time to have a look to our DA0-002 exam guide.

## CompTIA Data+ Exam (2025) Sample Questions (Q44-Q49):

### NEW QUESTION # 44

A company wants to limit an employee's access to a production environment. Which of the following access control practices is the best to implement?

- A. Attribute-based
- B. Mandatory
- C. Role-based
- D. Time-based

**Answer: C**

**Explanation:**

This question falls under the Data Governance domain, focusing on access control practices for data security. The task is to limit an employee's access to a production environment, requiring a structured approach.

\* Mandatory (Option A): Mandatory access control (MAC) uses strict, system-enforced rules (e.g., military settings), but it's overly

rigid for most companies.

\* Time-based (Option B): Time-based access limits access to specific times, which doesn't address general production environment access.

\* Attribute-based (Option C): Attribute-based access control (ABAC) uses attributes (e.g., department, location), but it's complex and not the simplest solution.

\* Role-based (Option D): Role-based access control (RBAC) assigns permissions based on the employee's role, ensuring they only access what's needed for their job, making it the best practice for limiting production access.

The DA0-002 Data Governance domain includes "data privacy concepts," and role-based access control is a widely adopted practice for limiting access in production environments.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 5.0 Data Governance.

### NEW QUESTION # 45

A data analyst receives a new data source that contains employee IDs, job titles, dates of birth, addresses, years of service, and employees' birth months. Which of the following inconsistencies should the analyst identify?

- A. Parallel
- **B. Redundancy**
- C. Equivalence
- D. Duplication

**Answer: B**

Explanation:

This question falls under the Data Governance domain, focusing on identifying data quality issues. The dataset includes dates of birth and birth months, which suggests a potential inconsistency.

\* Redundancy (Option A): The dataset includes both dates of birth (e.g., 1990-05-15) and birth months (e.g., May), which is redundant because the birth month can be derived from the date of birth, indicating a data quality issue.

\* Equivalence (Option B): Equivalence isn't a standard data quality term in this context; it might refer to data matching, which isn't the issue here.

\* Parallel (Option C): Parallel isn't a recognized data quality term; it might relate to processing, not data inconsistencies.

\* Duplication (Option D): Duplication refers to identical records, but the issue here is redundant fields, not duplicate rows.

The DA0-002 Data Governance domain includes "data quality control concepts," and redundancy is a key inconsistency when the same information is stored in multiple forms unnecessarily.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 5.0 Data Governance.

### NEW QUESTION # 46

A data analyst is creating a new dataset that involves bringing together the following datasets:

Name

ID

Date of birth

Frank

23525

3/19

Martha

11290

6/13

Ellen

12141

11/4

ID

Address

City

State

23525

1234 Harding

Chicago

IL

11040

935 Terrace Hills  
Chino  
CA  
11290  
2 Speedway  
Miami  
FL

Which of the following would be the output if the data analyst does a FULL JOIN?

- A. Name  
ID  
Date of birth  
Address  
City  
State  
Frank  
23525  
3/19  
1234 Harding  
Chicago  
IL  
Martha  
11290  
6/13  
2 Speedway  
Miami  
FL  
Ellen  
12141  
11/4  
11040  
935 Terrace Hills  
Chino  
CA
- B. Name  
ID  
Date of birth  
Address  
City  
State  
Frank  
23525  
3/19  
1234 Harding  
Chicago  
IL  
Martha  
11290  
6/13  
935 Terrace Hills  
Chino  
CA  
Ellen  
12141  
11/4  
2 Speedway  
Miami  
FL
- C. Name  
ID  
Date of birth

Address  
 City  
 State  
 Frank  
 23525  
 3/19  
 1234 Harding  
 Chicago  
 IL  
 Martha  
 11290  
 6/13  
 2 Speedway  
 Miami  
 FL  
 Ellen  
 12141  
 11/4  
 935 Terrace Hills  
 Chino  
 CA  
 • D. Name  
 ID  
 Date of birth  
 Address  
 City  
 State  
 Frank  
 23525  
 3/19  
 1234 Harding  
 Chicago  
 IL  
 Martha  
 11290  
 6/13  
 935 Terrace Hills  
 Chino  
 CA  
 Ellen  
 12141  
 11/4  
 2 Speedway  
 Miami  
 FL

**Answer: A**

Explanation:

This question falls under the Data Concepts and Environments domain, focusing on database operations like joins. A FULL JOIN combines all rows from both tables, including matches and non-matches, filling in NULLs where there's no corresponding data.

\* The first table has IDs: 23525 (Frank), 11290 (Martha), 12141 (Ellen).

\* The second table has IDs: 23525, 11040, 11290.

\* A FULL JOIN includes all IDs: 23525, 11290, 12141, 11040.

\* 23525 matches (Frank with 1234 Harding, Chicago, IL).

\* 11290 matches (Martha with 2 Speedway, Miami, FL).

\* 12141 has no match in the second table, so Address, City, and State are NULL.

\* 11040 has no match in the first table, so Name and Date of birth are NULL.

\* Option A: Incorrect; it includes a row for Ellen with "2 Speedway," but Ellen's ID (12141) doesn't match any address, and 11040 is missing.

\* Option B: Identical to Option A, so incorrect for the same reasons.

\* Option C: Incorrect; it mismatches addresses (e.g., Ellen with 935 Terrace Hills, which belongs to 11040).

\* Option D: Correct; it includes all IDs, with NULLs for non-matching rows (Ellen has no address, and 11040 has no name).

The DA0-002 Data Concepts and Environments domain includes understanding "data schemas and dimensions," such as performing joins in relational databases.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 1.0 Data Concepts and Environments.

#### NEW QUESTION # 47

A data analyst needs to identify outliers from a given dataset. Which of the following visualizations is the best way to identify outliers?

- A. Scatter plot
- **B. Box plot**
- C. Gantt chart
- D. Waterfall chart

**Answer: B**

Explanation:

This question falls under the Visualization and Reporting domain, focusing on selecting the appropriate visualization to identify outliers in a dataset.

\* Box plot (Option A): A box plot displays the distribution of data, including the median, quartiles, and outliers (data points beyond the whiskers), making it the best choice for identifying outliers.

\* Scatter plot (Option B): A scatter plot shows relationships between two variables, and while outliers may be visible, it's not specifically designed for outlier detection.

\* Gantt chart (Option C): Gantt charts are for project scheduling, not suitable for outlier identification.

\* Waterfall chart (Option D): Waterfall charts show cumulative changes (e.g., financial contributions), not designed for outlier detection.

The DA0-002 Visualization and Reporting domain emphasizes "translating business requirements to form the appropriate visualization," and a box plot is the standard visualization for identifying outliers.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 4.0 Visualization and Reporting.

#### NEW QUESTION # 48

Which of the following best describes the semi-structured data that is gathered when web scraping?

- **A. JSON**
- B. CSS
- C. HTML
- D. CSV

**Answer: A**

Explanation:

This question pertains to the Data Acquisition and Preparation domain, which in DA0-002 includes understanding data acquisition concepts and the types of data gathered from various sources, such as web scraping. Web scraping involves extracting data from websites, and the data gathered is often semi-structured, meaning it has some organizational structure but isn't fully relational like a database table.

\* JSON (Option A): JSON (JavaScript Object Notation) is a semi-structured data format commonly used in web applications.

Web scraping often retrieves data in JSON format via APIs or embedded scripts, as it's lightweight and structured with key-value pairs, making it ideal for semi-structured data.

\* CSV (Option B): CSV (Comma-Separated Values) is a structured format typically used for tabular data. It's not commonly the direct output of web scraping, though scraped data might be converted to CSV later.

\* CSS (Option C): CSS (Cascading Style Sheets) is used for styling web pages and isn't a data format, making it irrelevant for describing scraped data.

\* HTML (Option D): HTML (HyperText Markup Language) is the structure of web pages and is often the raw format scraped during web scraping. While HTML is semi-structured due to its tag-based hierarchy, it's primarily a markup language, not a data format, and the actual data extracted is often parsed into formats like JSON.

The DA0-002 Data Acquisition and Preparation domain aligns with the DA0-001 focus on "data acquisition concepts" (web ID: 14), which includes identifying formats like JSON as semi-structured data commonly acquired through web scraping. JSON is the
