Do you want to double your salary in a short time? Yes, it is not a dream. Our SCP-NPM latest study guide can help you. IT field is becoming competitive; a SolarWinds certification can help you do that. If you get a certification with our SCP-NPM latest study guide, maybe your career will change. A useful certification will bring you much outstanding advantage when you apply for any jobs about SolarWinds company or products. Just only dozens of money on SCP-NPM Latest Study Guide will assist you 100% pass exam and 24-hours worm aid service.

SolarWinds SCP-NPM (SolarWinds Network Performance Monitor (NPM)) Certification Exam is designed for professionals who want to demonstrate their expertise in the field of network performance monitoring. SolarWinds Network Performance Monitor (NPM) Exam certification exam validates the skills and knowledge required to effectively use SolarWinds Network Performance Monitor (NPM) to monitor and manage network performance.

## Latest SCP-NPM Examprep & Exam SCP-NPM Format

TroytecDumps is professional platform to establish for compiling SCP-NPM exam materials for candidates, and we aim to help you

to pass the SCP-NPM examination as well as getting the related certification in a more efficient and easier way. Owing to the superior quality and reasonable price of our SCP-NPM Exam Materials, our SCP-NPM exam torrents are not only superior in price than other makers in the international field, but also are distinctly superior in many respects. Our pass rate of SCP-NPM exam braindump is as high as 99% to 100%, which is unique in the market.

## **SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q57-Q62):**

### **NEW QUESTION # 57**

All users can create their own Orion Maps. How do you limit a user from seeing or working with select monitored entities through the SolarWinds server?

- **A. Configure permissions on the monitored entity to remove access to the Orion user account**
- B. Configure Account limitations to remove access to the Orion user account
- C. Unmanage entities to remove access to the Orion user account
- D. Configure Alert imitations to remove access to the Orion user account

**Answer: A**

### **NEW QUESTION # 58**

A custom poller has polled some results from nodes. Which of the following is a possible reason for NOT being able to show the polled results as charts on the Orion Web Console?

- A. You did not set the poller to collect historical statistics
- B. You must use Device Studio to build the poller
- **C. Charts are only supported by out-of-the-box pollers**
- D. The poller is not enabled and assigned to the devices

**Answer: C**

### **NEW QUESTION # 59**

You can make bulk changes, such as changing the polling method, to nodes.

- **A. TRUE**
- B. FALSE

**Answer: A**

Explanation:

You can make bulk changes to nodes in NPM using the Manage Nodes feature. This allows you to select multiple nodes and edit their properties, such as the polling method, the polling frequency, the SNMP credentials, the custom properties, and more. You can also use the Edit Nodes feature to assign or unassign pollers to nodes, such as the Universal Device Poller (UnDP), the Hardware Health Poller, the Wireless Poller, and more<sup>12</sup>. Reference: 1: Change the polling method for a node<sup>3</sup>, 2: Manage pollers using Device Studio<sup>4</sup>

### **NEW QUESTION # 60**

Status, Average Response Time, and Packet Loss are the only node details data you can view for your switch A device. The node details of your identical switch B device show Status, Average Response Time, and Packet Loss and other statistics. How can you monitor the other statistics on switch A and not lose any historical data?

- A. Delete switch A, and then add it again and this time choose "Most Devices: SNMP and ICMP" as the polling method
- B. Add switch A again without deleting it first, and this time choose "Most Devices: SNMP and ICMP" as the polling method
- **C. Edit the node properties of switch A and change the polling method to "Most Devices: SNMP and ICMP"**
- D. Edit the node properties of switch A and change the polling method to "Status Only: ICMP"
- E. Edit the node properties of switch B and change the polling method to "Status Only: ICMP"

**Answer: C**

Explanation:

According to the SolarWinds NPM Administrator Guide, you can edit the node properties of any device and change the polling method to suit your needs. The polling method determines what data is collected and displayed for the node. The "Most Devices: SNMP and ICMP" polling method collects and displays the most comprehensive data, including CPU load, memory utilization, interface statistics, and more. The "Status Only:

ICMP" polling method only collects and displays the node status, average response time, and packet loss. If you want to monitor the other statistics on switch A, you should change the polling method to "Most Devices:

SNMP and ICMP". This will not affect the historical data that has already been collected for switch A, as it will be stored in the database. However, deleting switch A and adding it again, or adding switch A again without deleting it first, will result in losing the historical data or creating duplicate nodes. References: SolarWinds NPM Administrator Guide, page 78-79; Polling methods used by Orion

### NEW QUESTION # 61

How can you extend NPM's monitoring to non-standard devices?

- A. Using OIDs organized in MIBs
- B. Deploying Orion agents
- C. Polling with non-standard protocols
- D. Combining licenses from different products

**Answer: A**

Explanation:

NPM can monitor a wide range of network devices and infrastructure, including routers, switches, firewalls, servers, and virtual machines. However, some devices may not support standard protocols such as SNMP or WMI, or may have specific metrics that are not monitored out-of-the box by NPM. In such cases, you can extend NPM's monitoring to non-standard devices by using object identifiers (OIDs) organized in management information bases (MIBs). OIDs are numeric strings that uniquely identify a variable in a MIB.

MIBs are hierarchical databases that define the properties and values of the variables that can be monitored on a device. By importing device-specific MIBs into the SolarWinds MIB Database, and creating custom pollers based on OIDs from the MIBs, you can monitor any metric that is available on the device. You can also display the polled data in the web console using dedicated or existing resources<sup>12</sup>. References:
