## Oracle Cloud Infrastructure 2025 DevOps Professional Sample Questions (Q27-Q32):

### NEW QUESTION # 27

The Kubernetes Master node serves as the central control plane for managing the cluster's resources and orchestrating workload deployment.

What are the primary responsibilities of the Kubernetes Master node?

- A. The Master node is primarily tasked with executing application workloads and ensuring their availability within the cluster.
- B. The Master node serves as a repository for storing container images, facilitating rapid deployment and scaling of applications.
- **C. The Master node oversees the scheduling and allocation of cluster resources, ensuring optimal utilization across nodes.**
- D. The Master node monitors network traffic within the cluster, ensuring secure communication and efficient data transfer between nodes.

**Answer: C**

Explanation:

The Kubernetes Master node is the central control plane responsible for managing the cluster's resources and orchestrating workload deployment. Its primary responsibilities include:

Scheduling: Deciding which workloads (pods) should run on which worker nodes, based on resource availability and scheduling constraints.

Resource Allocation: Allocating resources to workloads to ensure optimal utilization across nodes.

Cluster Management: Maintaining the desired state of applications, managing cluster events, and ensuring that all the components of the cluster are functioning properly.

### NEW QUESTION # 28

You have been asked to provision a new production environment on Oracle Cloud Infrastructure (OCI). After working with the solution architect, you decide that you are going to automate this process.

Which OCI service can help automate the provisioning of this new environment?

- A. Oracle Functions
- B. OCI Streaming Service
- **C. OCI Resource Manager**
- D. Oracle Container Engine for Kubernetes

**Answer: C**

Explanation:

OCI Resource Manager is an infrastructure as code (IaC) service that allows you to automate the provisioning of resources on Oracle Cloud Infrastructure (OCI) using Terraform. It is ideal for automating the setup of environments, as it can manage the full lifecycle of your infrastructure in a consistent, repeatable, and version-controlled manner.

### NEW QUESTION # 29

How can you run applications on GPU worker nodes in clusters created using Container Engine for Kubernetes (OKE)?

- A. By selecting a managed node pool, a GPU shape, and a GPU image, and specifying the number of CPU resources required in the pod spec
- B. By selecting a virtual node pool, a GPU shape, and a GPU image, and ensuring that the CUDA libraries are included in the application container
- C. By selecting a managed node pool, a GPU shape, and a GPU image, and ensuring that the CUDA libraries for different GPUs are pre-installed on the worker nodes
- **D. By selecting a managed node pool, a GPU shape, and a GPU image that has CUDA libraries pre-installed, and specifying the number of GPU resources required in the pod spec**

**Answer: D**

Explanation:

To run applications on GPU worker nodes in Oracle Kubernetes Engine (OKE), you need to:

Select a managed node pool and choose a GPU shape for the worker nodes.

Use a GPU image that has the necessary CUDA libraries pre-installed to ensure that GPU workloads can be executed properly.

In the pod specification, specify the number of GPU resources required for the container to utilize the GPU hardware during

execution. This allows Kubernetes to schedule the pod on a node with an available GPU.

### NEW QUESTION # 30

As a DevOps engineer at XYZ Corp, you have been assigned the task of setting up a new OKE (Oracle Kubernetes Engine) cluster to manage the organization's Kubernetes applications hosted on Oracle Cloud Infrastructure (OCI). Your goal is to ensure a smooth and efficient process while preparing for the cluster creation.

Which of the following statements is false regarding the preparation process for setting up a new OKE cluster?

- A. It is necessary to ensure sufficient quota on different resource types in your OCI tenancy for the cluster setup.
- B. Access to an Oracle Cloud Infrastructure tenancy is required to set up the new OKE cluster.
- C. Container Engine for Kubernetes cannot utilize existing network resources for the creation of the new cluster.
- D. Container Engine for Kubernetes automatically creates and configures new network resources for the new cluster.

**Answer: C**

Explanation:

This statement is false because Container Engine for Kubernetes (OKE) can utilize existing network resources such as Virtual Cloud Networks (VCNs), subnets, security lists, and route tables for the creation of a new cluster. You can either use pre-existing network resources or let OKE create new network resources automatically.

### NEW QUESTION # 31

Which two are prerequisites for creating a secret in Oracle Cloud Infrastructure Vault service? (Choose two.)

- A. The user must create a compute instance to run the secret service.
- B. You must have a Vault managed key to encrypt the secret.
- C. You must have an auth token to encrypt the secret.
- D. You must first create a hash digest of the secret value.
- E. You must have the required permissions to create and manage secrets in the Vault service.

**Answer: B,E**

Explanation:

You need the required permissions (such as policies allowing secret management) to create and manage secrets in Oracle Cloud Infrastructure (OCI) Vault service. These permissions are essential for performing operations such as creating, reading, and managing secrets.

Vault managed key is required to encrypt the secret before it is stored in the OCI Vault. The managed key acts as the encryption key for securing the secret, ensuring its confidentiality.
