EMC Dell PowerFlex Operate Exam Sample Questions (Q102-Q107):

NEW QUESTION # 102

What are the benefits of using shared file systems in PowerFlex? (Choose two).

- A. Enables deduplication and compression
- **B. Provides high availability for shared data**
- C. Enhances fault tolerance
- **D. Simplifies data sharing between nodes**

Answer: B,D

Explanation:

PowerFlex File (NAS) is designed for concurrent access.

* Simplifies data sharing between nodes (Option A): The core benefit of a shared file system (NFS /SMB) is that multiple compute nodes (Clients) can access the exact same files simultaneously. This is essential for clustered applications, user home directories, or shared logs.

* Provides high availability for shared data (Option D): PowerFlex File uses clustered NAS headers (NAS Nodes). If one NAS node fails, the IP address and file handles are automatically failed over to a surviving NAS node. This ensures that clients do not lose

access to the data, maintaining high availability.

NEW QUESTION # 103

An administrator wants to improve performance of heavily used volumes. What is the best approach?

- A. Reduce capacity
- **B. Add more SDS nodes**
- C. Reduce replication
- D. Disable monitoring

Answer: B

Explanation:

Adding SDS nodes increases parallelism and improves performance. Reducing replication risks data protection.

NEW QUESTION # 104

An administrator is monitoring a PowerFlex cluster and notices increased latency on certain volumes. The SDS and SDC components appear healthy. The administrator needs to identify whether the issue is related to backend disk performance or network congestion. Which tool should be used first?

- A. External SNMP tool
- B. Operating system logs
- C. PowerFlex CLI
- **D. PowerFlex GUI performance monitoring**

Answer: D

Explanation:

The PowerFlex GUI provides built-in performance monitoring dashboards, including latency, IOPS, and throughput metrics. It allows administrators to quickly identify whether bottlenecks originate from disks or network paths. CLI and OS logs provide detail but are less efficient for initial diagnosis.

NEW QUESTION # 105

Which action ensures compliance with PowerFlex alerting configurations?

- A. Enable snapshot retention policies
- **B. Enable SNMP traps for event monitoring**
- C. Assign alerts to fault sets
- D. Configure VLAN tagging for alert traffic

Answer: B

Explanation:

To ensure that a PowerFlex system complies with enterprise monitoring standards and that administrators are notified of critical failures immediately, integrating with external monitoring tools is essential.

Enable SNMP traps (Option A): PowerFlex (specifically the Gateway or PowerFlex Manager) can be configured to send Simple Network Management Protocol (SNMP) traps to a central Network Operations Center (NOC) console (like SolarWinds, Nagios, or Dell Secure Connect Gateway).

This ensures that if a drive fails or a node goes offline, the event is pushed out immediately rather than waiting for an administrator to log in and check the GUI.

NEW QUESTION # 106

Which operation redistributes data after adding new nodes?

- **A. Rebalance**
- B. Snapshot

- C. Mapping
- D. Replication

Answer: A

Explanation:

Rebalance ensures even data distribution after scaling operations.
