

# CCCS-203b Real Question, CCCS-203b Training For Exam

Before you buy our CCCS-203b study questions you can have a free download and tryout and you can have an understanding of our product by visiting our pages of our product on the website. The pages of our CCCS-203b guide torrent provide the demo and you can understand part of our titles and the form of our software. On the pages of our CCCS-203b exam torrent you can see the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the product, the price of the product and the discounts. The pages also list the details and the guarantee of our CCCS-203b Exam Torrent, the methods to contact us, the evaluations of the past client on our product, the related exams and other information about our CCCS-203b guide torrent. So before your purchase you can have an understanding of our product and then decide whether to buy our CCCS-203b study questions or not.

Hundreds of candidates want to get the CrowdStrike Certified Cloud Specialist (CCCS-203b) certification exam because it helps them in accelerating their CrowdStrike careers. Cracking the CCCS-203b exam of this credential is vital when it comes to the up gradation of their resume. The CCCS-203b Certification Exam helps students earn from online work and it also benefits them in order to get a job in any good tech company.

## CCCS-203b Training For Exam, CCCS-203b Valid Exam Questions

We make sure that the CrowdStrike CCCS-203b exam questions prices are affordable for everyone. All three Exams-boost CCCS-203b exam practice test questions formats are being offered at the lowest price. Just get benefits from this cheap CrowdStrike Certified Cloud Specialist CCCS-203b Exam Questions price and download it right now.

### CrowdStrike CCCS-203b Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"><li>Remediating and Reporting Issues: This domain addresses identifying remediation steps for findings, using scheduled reports for cloud security, and utilizing Falcon Fusion SOAR workflows for automated notifications.</li></ul>   |
| Topic 2 | <ul style="list-style-type: none"><li>Cloud Security Policies and Rules: This domain addresses configuring CSPM policies, image assessment policies, Kubernetes admission controller policies, and runtime sensor policies based on specific use cases.</li></ul>   |
| Topic 3 | <ul style="list-style-type: none"><li>Falcon Cloud Security Features and Services: This domain covers understanding CrowdStrike's cloud security products (CSPM, CWP, ASPM, DSPM, IaC security) and their integration, plus one-click sensor deployment and Kubernetes admission controller capabilities.</li></ul> |

|         |   |
|---------|---|
| Topic 4 | <ul style="list-style-type: none"> <li>• Pre-Runtime Protection: This domain covers managing registry connections, selecting image assessment methods, and analyzing assessment reports to identify malware, CVEs, leaked secrets, Dockerfile misconfigurations, and vulnerabilities before deployment.</li> </ul>                          |
| Topic 5 | <ul style="list-style-type: none"> <li>• Findings and Detection Analysis: This domain covers evaluating security controls to identify IOMs, vulnerabilities, suspicious activity, and persistence mechanisms, auditing user permissions, comparing configurations to benchmarks, and discovering unmanaged public-facing assets.</li> </ul> |

## CrowdStrike Certified Cloud Specialist Sample Questions (Q248-Q253):

### NEW QUESTION # 248

What is the primary purpose of the Image Assessment report in CrowdStrike's cloud security platform?

- A. Identifying potential high-severity vulnerabilities, leaked secrets, and misconfigurations.
- B. Removing unauthorized images from the repository.
- C. Detecting malware in container images.
- D. Highlighting outdated software versions in containers.

**Answer: A**

Explanation:

Option A: The Image Assessment report is designed to provide a comprehensive evaluation of container images to identify security risks such as malware, CVEs, misconfigurations in Docker files, and leaked secrets. This detailed report helps security teams proactively address issues before deploying the containers.

Option B: While outdated software may contribute to vulnerabilities, the Image Assessment report focuses on known vulnerabilities (CVEs) rather than simply reporting software age or version.

Option C: Image removal is not a function of the Image Assessment report. Image repository management is typically handled through access policies and repository-specific tools.

Option D: While detecting malware is a feature of the Image Assessment report, it is not the primary purpose. Malware detection is part of the broader assessment that includes CVEs, misconfigurations, and secrets.

### NEW QUESTION # 249

While investigating an alert in the CrowdStrike Falcon platform, you discover a registry key modification in HKCU\Software\Microsoft\Windows\CurrentVersion\Run referencing a newly created executable in the user's AppData\Roaming directory.

What does this likely indicate?

- A. An update to a legitimate application stored in the AppData directory.
- B. A malicious persistence mechanism designed to execute malware at startup.
- C. A routine application installation adding itself for automatic startup.
- D. A harmless system optimization script configured to run on boot.

**Answer: B**

Explanation:

Option A: The HKCU\Software\Microsoft\Windows\CurrentVersion\Run registry key is a common persistence mechanism used by malware. The presence of a new executable in the AppData\Roaming directory is particularly suspicious, as this directory is often exploited by attackers to store malicious files. Further investigation is necessary to analyze the executable and mitigate the threat.

Option B: System optimization scripts rarely require registry modifications for persistence and are generally stored in predefined system directories, not AppData. The context points more toward malicious activity.

Option C: While some applications use AppData for updates, they generally overwrite existing files rather than create new executables with corresponding registry entries. Validate this scenario against update logs and application behavior.

Option D: Legitimate applications may add entries to this registry key, but these are typically well-documented and located in program directories, not AppData\Roaming. The context of the directory and newly created executable makes this explanation less likely.

### NEW QUESTION # 250

Which statement correctly explains how Falcon Cloud Security components work together to protect cloud environments?

- A. Falcon Cloud Security relies exclusively on the Falcon Overwatch team for threat detection, ignoring automated analytics.
- B. Falcon Cloud Security requires users to manually correlate data between different Falcon modules to identify and remediate threats.
- **C. Falcon Cloud Security integrates modules like Falcon Horizon and Falcon Prevent to detect vulnerabilities and protect workloads without manual configuration.**
- D. Falcon Cloud Security depends on third-party APIs for detecting and responding to misconfigurations in cloud platforms.

**Answer: C**

Explanation:

Option A: While the Falcon Overwatch team provides expert threat hunting, Falcon Cloud Security also relies on automated analytics and AI-based detection. This ensures a comprehensive approach to identifying and mitigating threats without solely depending on human oversight.

Option B: Falcon modules are designed to work together seamlessly, automatically correlating data to provide actionable insights. Manual correlation is not required, and suggesting otherwise misrepresents the platform's automation and integration capabilities.

Option C: While Falcon Cloud Security can interact with third-party APIs for extended functionality, it has native capabilities to detect misconfigurations and threats in cloud environments. This reduces dependence on external tools.

Option D: Falcon Cloud Security leverages integration with modules like Falcon Horizon for cloud posture management and Falcon Prevent for real-time prevention. These integrations streamline vulnerability detection and workload protection without requiring extensive manual configuration.

### NEW QUESTION # 251

An organization is deploying the CrowdStrike Falcon sensor on a Linux server to secure their Kubernetes workloads.

Which of the following is a requirement for successfully installing the Falcon sensor on a Linux server?

- A. The Linux server must have Docker installed as the only supported container runtime.
- B. The Linux server must be running in a bare-metal environment, as virtual machines are not supported.
- **C. The Linux server must run a kernel version that is supported by the Falcon sensor.**
- D. The server must disable all other antivirus or endpoint security software before installation.

**Answer: C**

Explanation:

Option A: The Falcon sensor requires compatibility with specific Linux kernel versions. Running an unsupported kernel version can result in installation failure or incomplete functionality. This requirement ensures the sensor can operate effectively and perform its security functions.

Option B: This is incorrect because the Falcon sensor is container-runtime agnostic. While Docker is supported, the sensor also works with other container runtimes, such as containerd and CRI-O.

Option C: While it is recommended to ensure compatibility with other endpoint security tools, the Falcon sensor does not require other antivirus software to be disabled. It can often coexist with other tools depending on configuration.

Option D: This is incorrect because the Falcon sensor supports both bare-metal and virtualized environments. It is designed to operate in diverse infrastructure setups, including cloud-based virtual machines.

### NEW QUESTION # 252

A security administrator at a mid-sized company wants to automate security monitoring and ensure compliance with security policies by scheduling cloud security reports in the CrowdStrike Falcon platform.

Which of the following best describes the primary purpose of scheduled reports in CrowdStrike's cloud security offering?

- A. To act as a replacement for real-time security monitoring tools like SIEMs
- **B. To automate periodic security insights and compliance monitoring for cloud environments**
- C. To provide continuous, real-time alerts on security threats as they occur
- D. To execute immediate remediation actions based on predefined security policies

**Answer: B**

Explanation:

Option A: The primary purpose of scheduled reports is to provide automated security insights, compliance overviews, and periodic monitoring of cloud environments, helping teams proactively manage risks.

Option B: Scheduled reports complement real-time monitoring but do not replace tools like SIEMs, which aggregate and analyze security data continuously.

Option C: Scheduled reports are designed for periodic insights, not for real-time alerting. Real-time alerts are handled by Falcon's detection and response mechanisms, not scheduled reports.

Option D: While security reports provide valuable insights, they do not execute remediation actions directly. Remediation is handled by security teams based on insights from reports.

## NEW QUESTION # 253

.....

We believe that the best brands are those that go beyond expectations. They don't just do the job – they go deeper and become the fabric of our lives. Our product boosts many merits and functions. You can download and try out our CCCS-203b test question freely before the purchase. You can use our product immediately after you buy our product. We provide 3 versions for you to choose and you only need 20-30 hours to learn our CCCS-203b Training Materials and prepare the exam. The passing rate and the hit rate are both high.
