HOT Practice CIS-PA Online 100% Pass | Valid Certified Implementation Specialist - Platform Analytics Exam Dumps Pass for sure

If you want to clear the Central Finance in Certified Implementation Specialist - Platform Analytics (CIS-PA) test, then you need to study well with real Certified Implementation Specialist - Platform Analytics (CIS-PA) exam dumps of VCEPrep. These ServiceNow CIS-PA exam dumps are trusted and updated. We guarantee that you can easily crack the Certified Implementation Specialist - Platform Analytics (CIS-PA) test if use our actual Central Finance in Certified Implementation Specialist - Platform Analytics (CIS-PA) dumps.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q24-Q29):

NEW QUESTION # 24

What specifies the base table and field used to uniquely identify elements in a Breakdown Source?

- A. Facts table and Sys ID field
- B. Indicator Configuration and Target Value
- C. Manual Indicator and Scoresheet
- D. Related List Conditions and Field Labels

Answer: A

Explanation:

A Breakdown Source relies on the Facts table and a unique identifier field (typically the Sys ID) to define how breakdown elements are generated and linked to indicator scores. The Facts table specifies where the breakdown data originates, while the Sys ID field uniquely identifies each breakdown element.

Related list conditions and labels do not define uniqueness. Indicator configuration and targets are unrelated to breakdown structure. Manual indicators and scoresheets are not involved in breakdown sourcing.

ServiceNow documentation clearly states that the Facts table and unique identifier are foundational to Breakdown Source configuration, making option B the correct answer.

NEW QUESTION # 25

Which of the following statements best describes an Automated Indicator?

- A. A subcategorization of an indicator that provides more granular views of scores
- B. A scheduled job that collects data
- C. A series of measurements that describe a process over a period of time
- D. A process summary taken at a single point in time

Answer: C

Explanation:

An Automated Indicator in Platform Analytics is defined as a series of measurements collected over time that represent the performance of a process. These measurements are stored as time series data, allowing organizations to analyze trends, patterns, and historical performance. Automated indicators rely on indicator sources and scheduled data collection jobs to collect data at defined intervals, such as daily or hourly.

Option B describes a snapshot report, which represents data at a single point in time and does not support trending. Option C refers to breakdowns, which categorize indicator scores for deeper analysis but do not define the indicator itself. Option D describes the data collection job, which is a mechanism used by automated indicators but not the indicator definition. ServiceNow documentation explicitly states that indicators represent performance over time, making option A the correct and most complete description of an Automated Indicator.

NEW QUESTION # 26

When creating a breakdown on the age of a task, which table can be used as the Facts table of the Breakdown Source?

- A. Choice [sys_choice]
- B. Task [task]
- C. Bucket Group
- D. Bucket [pa_buckets]

Answer: D

Explanation:

When creating a breakdown based on the age of a task, the correct Facts table for the Breakdown Source is Bucket [pa_buckets]. In Platform Analytics, age-based breakdowns (such as 0-5 days, 6-10 days, etc.) are not derived directly from the Task table. Instead, they use bucketed data, which is generated by bucket groups during data collection.

The pa_bucket table stores the calculated bucket values for records at collection time, making it the authoritative facts table for age, duration, and numeric range breakdowns. Bucket Groups define how values are grouped, while the Bucket table stores the actual bucket assignments used in analytics. The Task table itself cannot be used as the facts table for age breakdowns because Platform Analytics requires pre-aggregated, time-aware bucket data to ensure historical accuracy. The Choice table is only used for choice list values and is unrelated to numeric or age-based breakdowns. ServiceNow documentation clearly states that bucket-based breakdowns must reference the pa_bucket table to function correctly and produce accurate time series analytics.

NEW QUESTION # 27

What happens when you select a predefined filter condition in the data source selection screen?

- A. The filter is saved and it will be automatically applied in future uses of the same data source
- B. The filter is applied and the data source is automatically selected

- C. The filter is applied and it can be refined under the Conditions section
- D. The data source is automatically selected without any further options

Answer: C

Explanation:

When a predefined filter condition is selected during data source configuration, Platform Analytics applies the filter immediately and displays it in the Conditions section, where it can be reviewed, modified, or extended.

This allows administrators to start with a standard filter and refine it to meet specific analytics requirements.

The filter is not automatically saved for future use, nor does it automatically select the data source without user confirmation.

ServiceNow documentation clarifies that predefined filters act as starting templates, not locked or persistent filters. Administrators retain full control to adjust conditions before saving the indicator or data source. Therefore, option D accurately describes the behavior.

NEW QUESTION # 28

Which of the following accurately describes how Formula Indicators are calculated in ServiceNow?

- A. They are calculated and displayed in real time without being stored
- B. They are pre-calculated and stored for future use
- C. They are calculated in real time but stored as temporary data
- D. They are calculated daily and stored in the main database

Answer: B

Explanation:

Formula Indicators in Platform Analytics are pre-calculated during data collection and their results are stored in the Indicator Facts table, just like automated indicators. They are not calculated in real time when a dashboard is viewed. Instead, they use the previously collected scores of their component indicators to compute a derived value at collection time.

This design ensures consistent historical analysis, predictable performance, and accurate trending. Real-time calculation would undermine historical integrity and dashboard performance, which is why ServiceNow explicitly avoids it for formula indicators. The stored results can then be reused across dashboards and reports without recalculation. ServiceNow documentation clearly states that formula indicators behave like other indicators in that they are persisted for future analysis, making option C correct.

NEW QUESTION # 29

.....

Our CIS-PA preparation exam have assembled a team of professional experts incorporating domestic and overseas experts and scholars to research and design related exam bank, committing great efforts to work for our candidates. Most of the experts have been studying in the professional field for many years and have accumulated much experience in our CIS-PA Practice Questions. So we can say that our CIS-PA exam questions are the first-class in the market. With our CIS-PA learning guide, you will get your certification by your first attempt.

CIS-PA Exam Dumps: <https://www.vceprep.com/CIS-PA-latest-vce-prep.html>

ServiceNow Practice CIS-PA Online You may remain skeptical about our study material, ServiceNow Practice CIS-PA Online When you enter the interview process, these skills will help you stand out, And our CIS-PA study materials will help you pass the exam easily, Immediately after you have made a purchase for our CIS-PA practice dumps, you can download our exam study materials to make preparations for the exams, ServiceNow CIS-PA study guide is the best product to help you achieve your goal.

Interface Builder automatically sets scene names to the CIS-PA name of the view controller or its label if one is set) plus the suffix scene, To attain all these you just need to enroll in the ServiceNow CIS-PA Certification Exam and put in all your efforts and prepare well to crack the CIS-PA Certified Implementation Specialist - Platform Analytics exam easily.

Use Genuine ServiceNow CIS-PA Questions for your Exam Preparation

You may remain skeptical about our study material, When you enter the interview process, these skills will help you stand out, And our CIS-PA study materials will help you pass the exam easily.

Immediately after you have made a purchase for our CIS-PA practice dumps, you can download our exam study materials to make

preparations for the exams, ServiceNow CIS-PA study guide is the best product to help you achieve your goal.
