Pass Fire-Inspector-II Test - Fire-Inspector-II Real Exam Questions

These International Code Council Fire-Inspector-II exam questions give you an idea about the final International Code Council Fire-Inspector-II exam questions formats, exam question structures, and best possible answers, and you will also enhance your exam time management skills. Finally, at the end of Fire-Inspector-II Exam Practice test you will be ready to pass the final Fire-Inspector-II exam easily. Best of luck in 67 - Fire Inspector II Exam (Fire-Inspector-II) exam and professional career!!!

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q46-Q51):

NEW QUESTION # 46

Given: A health club contains a 1,000-sq. ft. exercise room.

Based on the square footage, what is the calculated occupant load allowed for this exercise room?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

The occupant load of a space is determined using the 2021 International Building Code (IBC), Table 1004.5 - Maximum Floor Area Per Occupant.

IBC Table 1004.5 - Occupant Load Factor for Exercise Rooms:

The occupant load factor for an exercise room is 1 person per 20 square feet.

Given that the exercise room is 1,000 sq. ft.:

$1,000 \text{ sq. ft.} \div 20 \text{ sq. ft. per person} = 50 \text{ occupants}$

Why Other Options Are Incorrect?

A: 10 - Would require a 100 sq. ft. per person load factor, which is not applicable for exercise rooms.

B: 20 - Incorrect calculation; using the correct load factor, the actual number is 50.

C: 30 - Also incorrect based on the proper load factor.

NEW QUESTION # 47

Given: A health club contains a 1,000-sq. ft. exercise room.

Based on the square footage, what is the calculated occupant load allowed for this exercise room?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

The occupant load of a space is determined using the 2021 International Building Code (IBC), Table 1004.5 - Maximum Floor Area Per Occupant.

IBC Table 1004.5 - Occupant Load Factor for Exercise Rooms:

The occupant load factor for an exercise room is 1 person per 20 square feet.

Given that the exercise room is 1,000 sq. ft.:

$1,000 \text{ sq. ft.} \div 20 \text{ sq. ft. per person} = 50 \text{ occupants}$

Why Other Options Are Incorrect?

A). 10 - Would require a 100 sq. ft. per person load factor, which is not applicable for exercise rooms.

B). 20 - Incorrect calculation; using the correct load factor, the actual number is 50.

C). 30 - Also incorrect based on the proper load factor.

Correct answer: D. 50

NEW QUESTION # 48

Two tents which each have an area of 20,000 sq. ft. shall be separated from each other by a distance of not less than:

- A. 10 ft.
- **B. 20 ft.**
- C. 25 ft.
- D. 0 ft. (no separation is required).

Answer: B

Explanation:

IFC Section 3103.8.2 (Separation of Temporary Tents) requires tents larger than 15,000 sq. ft. to be separated by at least 20 feet to prevent fire spread, unless connected by a corridor meeting specific requirements (not indicated here). Each tent at 20,000 sq. ft.

exceeds this threshold, necessitating 20 feet of separation. Option A (0 ft.) applies only to smaller tents, B (10 ft.) is insufficient, and D (25 ft.) exceeds the minimum. Thus, C is correct.

NEW QUESTION # 49

According to the fire code, when compliance is not immediate, inspection reports of code violations must always include a description of the violation and which of the following?

- A. The reinspection date
- B. The potential fines for noncompliance
- C. The mandatory court date
- **D. Recommended corrective action**

Answer: D

Explanation:

When fire inspectors identify code violations, the inspection report must include a description of the violation along with a recommended corrective action. This ensures that the responsible party understands what steps need to be taken to bring the property into compliance.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 109.3 (Notice of Violation) IFC 109.3 requires that any notice of violation must include a description of the violation and the necessary corrective action.

The intent is to provide clear guidance on how to remedy the issue to meet fire safety standards.

2. NFPA 1 - Fire Code (2021 Edition) - Section 1.7.6 (Enforcement and Documentation of Violations) NFPA 1, Section 1.7.6.1 states that violation reports must specify the corrective action required to comply with the fire code.

Detailed Explanation of Answer Choices:

Option A (Incorrect): While a reinspection date may be provided, it is not a mandatory component of an inspection report for code violations.

Option B (Incorrect): A mandatory court date is not always required; enforcement varies depending on jurisdiction and severity of the violation.

Option C (Correct): Recommended corrective action is required in all violation reports as per IFC 109.3 and NFPA 1.7.6.1.

Option D (Incorrect): Potential fines for noncompliance are determined separately and are not necessarily included in the initial violation report.

Thus, the correct and verified answer is: C. Recommended corrective action.

NEW QUESTION # 50

Atmospheric tanks with hazardous materials shall be equipped with a liquid-level limit control if they have a capacity which is greater than ___ gallons.

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

Reference to Liquid-Level Limit Control Requirements for Atmospheric Tanks:

According to The International Fire Code (IFC 2021), Section 5704.2.7.5, atmospheric tanks containing hazardous materials must be equipped with a liquid-level limit control if their capacity exceeds 500 gallons.

This requirement ensures that overfilling is prevented, reducing the risk of hazardous spills, leaks, and fire hazards.

Purpose of Liquid-Level Limit Controls:

These controls automatically shut off or alert operators when the liquid level reaches a predetermined limit.

They prevent tank overflow and reduce the risk of hazardous material release, which can cause fires, explosions, or environmental contamination.

Clarification of Incorrect Answer Choices:

A: 55 gallons # Incorrect

55-gallon drums are not subject to the same overflow protection requirements as large atmospheric tanks.

B: 100 gallons # Incorrect

Too low based on IFC 5704.2.7.5, which sets the requirement at 500 gallons.

C: 250 gallons # Incorrect

Some local regulations may require monitoring for tanks of this size, but IFC specifies 500 gallons as the mandatory threshold.

Conclusion:

The correct and verified answer is D (500 gallons) based on IFC 5704.2.7.5, ensuring proper overflow protection for atmospheric tanks containing hazardous materials.

NEW QUESTION # 51

.....

Our online test engine and the windows software of the Fire-Inspector-II guide materials can evaluate your exercises of the virtual exam and practice exam intelligently. Our calculation system of the Fire-Inspector-II study engine is designed subtly. Our evaluation process is absolutely correct. We are strictly in accordance with the detailed grading rules of the real exam. And our pass rate of the Fire-Inspector-II Exam Questions are high as 98% to 100%, it is unique in the market.
