Useful SCAIP Dumps | Exam SCAIP Questions Answers

Our website is a worldwide dumps leader that offers free valid SCAIP dumps for certification tests, especially for Saviynt test. We focus on the study of SCAIP valid test for many years and enjoy a high reputation in IT field by laTest SCAIP Valid vce, updated information and, most importantly, SCAIP vce dumps with detailed answers and explanations.

Saviynt Certified Advanced IGA Professional (Level 200) Sample Questions (Q28-Q33):

NEW QUESTION # 28

What are the different features available under Role Intelligence? (Multi-Select)

- A. Entitlement Discovery
- B. Role Mining
- C. Role Governance
- D. Role-Access Mismatches

Answer: A,B,C

Explanation:

In Saviynt EIC, Role Intelligence is a key component of Identity Governance that focuses on analyzing, optimizing, and managing roles effectively. It provides multiple features that help organizations improve role design and maintain compliance.

Role Governance (A) is a core feature that ensures roles are properly defined, reviewed, and certified. It helps maintain accountability and ensures that roles align with business policies.

Entitlement Discovery (B) enables identification and analysis of entitlements across applications, helping administrators understand what access exists and how it can be grouped into meaningful roles. This is essential for building accurate and efficient role models.

Role Mining (C) is one of the most important capabilities, allowing organizations to analyze user access patterns and automatically suggest roles based on common entitlement combinations. This improves role engineering and reduces manual effort.

Option D (Role-Access Mismatches) is not considered a standard feature under Role Intelligence; it is more aligned with analytics or audit findings rather than a core Role Intelligence function.

Therefore, the correct answers are A, B, and C, which represent the foundational features of Role Intelligence in Saviynt.

NEW QUESTION # 29

An EIC Administrator has a requirement to execute User Import at 9 AM everyday. What are the different options available in EIC to schedule this job?

- A. Externalconfig.properties file
- B. Global configuration
- C. CRON expression in Job trigger
- D. Schedule option (Hourly, Weekly, Daily, Minutes) in Job trigger

Answer: C,D

Explanation:

In Saviynt EIC, job scheduling is managed through the Job Control Panel, which provides flexible options to define when and how jobs such as User Import are executed. The correct options for scheduling are CRON expression and built-in schedule options, making A and B correct.

Option A (CRON expression in Job trigger) allows administrators to define precise scheduling using CRON syntax. For example, scheduling a job at exactly 9 AM every day can be achieved using a CRON expression, offering high flexibility and control.

Option B (Schedule option - Hourly, Weekly, Daily, Minutes) provides a user-friendly way to configure job schedules without writing CRON expressions. Administrators can simply select "Daily" and specify 9 AM, making it easier for standard scheduling needs.

Option C (Global configuration) is not used for scheduling jobs. Option D (Externalconfig.properties file) is used for system-level configurations, not job scheduling.

Thus, Saviynt supports both CRON-based and UI-based scheduling mechanisms for job execution.

NEW QUESTION # 30

Which HTTP method or methods is used to generate an Authorization Token for Saviynt EIC API?

- A. GET
- B. GIVE
- C. PUT
- D. POST

Answer: D

Explanation:

In Saviynt EIC, generating an Authorization Token for API access is performed using the HTTP POST method.

This is aligned with standard REST API authentication practices, where sensitive information such as credentials (username, password, client ID, or client secret) is securely transmitted in the request body rather than in the URL.

Saviynt provides API endpoints (such as /ECM/api/login) that require a POST request containing authentication details in JSON format. Upon successful authentication, the system returns a session token or authorization token, which is then used in subsequent API calls (typically passed in headers like Authorization or token).

Option A (PUT) and Option B (GET) are not suitable for authentication token generation. GET exposes parameters in the URL and is not secure for credential transmission, while PUT is typically used for updating resources. Option D (GIVE) is not a valid HTTP method.

Therefore, POST is the correct and secure method used in Saviynt APIs for authentication and token generation, ensuring compliance with RESTful and security best practices.

NEW QUESTION # 31

In which system does the request fulfillment happen while integrating ServiceNow using Saviynt App for ServiceNow?

- A. Saviynt or ServiceNow, based on the configuration
- B. None of the above
- C. ServiceNow
- D. Saviynt

Answer: A

Explanation:

In Saviynt-ServiceNow integration using the Saviynt App for ServiceNow, the request fulfillment location is flexible and depends on how the integration is configured. This is why Option C is correct.

Saviynt supports different integration patterns with ServiceNow. In one model, ServiceNow acts as the front-end request system, while Saviynt handles the fulfillment (provisioning, approvals, and access governance).

In another model, ServiceNow can handle certain fulfillment steps depending on how workflows, APIs, and ticketing configurations are defined.

For example, if the integration is configured such that ServiceNow creates a request and passes it to Saviynt, then Saviynt performs fulfillment. Alternatively, if certain fulfillment logic or orchestration is handled within ServiceNow workflows or ITSM processes, then ServiceNow may drive parts of the fulfillment process.

This flexibility allows organizations to align the integration with their operational model, whether centralized in Saviynt or distributed with ServiceNow. Therefore, fulfillment is not restricted to a single system and is determined by configuration and architectural design choices.

NEW QUESTION # 32

An EIC Administrator wants to retrieve a report of users and their assigned SAV Roles. What are the ways in which it can be achieved? (Multi-Select)

- A. Create analytics with the SQL Query to get the data and select the checkbox "Send Email As Attachment" in analytics configuration
- B. Run a SQL Query to retrieve the data in Data Analyzer
- C. Create an analytics with the SQL Query to get the data and export as CSV/Excel
- D. Using enhanced query

Answer: A,B,C

Explanation:

In Saviynt EIC, retrieving reports such as users and their assigned SAV roles can be achieved through multiple analytics and reporting mechanisms.

Option A is correct because administrators can create Analytics using SQL queries and configure them to send results via email as attachments, which is useful for scheduled reporting and automated distribution.

Option B is also valid since Analytics allows administrators to export query results into CSV or Excel formats, enabling offline analysis, auditing, and sharing with stakeholders.

Option C is correct because Data Analyzer provides a direct interface to execute SQL queries on the Saviynt database, allowing administrators to quickly retrieve required data without creating a formal analytics job.

Option D (Using enhanced query) is not a standard or recognized reporting method within Saviynt for this use case. While advanced queries can be written, "enhanced query" is not a defined feature or module for report extraction.

Thus, the correct answers are A, B, and C, which represent the primary supported methods for reporting in Saviynt.

NEW QUESTION # 33

.....

As a professional website, DumpStillValid does not only guarantee you will receive a high score in your actual test, but also provide you with the most efficiency way to get success. Our SCAIP study torrent can help you enhance the knowledge and get further information about the SCAIP Actual Test. During the study and preparation for SCAIP actual test, you will be more confident, independent in your industry. Dear everyone, go and choose our SCAIP practice dumps as your preparation material.

Useful SCAIP Dumps: <https://www.dumpstillvalid.com/SCAIP-prep4sure-review.html>

You need to prepare these Saviynt Certified Advanced IGA Professional (Level 200) SCAIP exam dumps to easily pass your exam, As DumpStillValid Useful SCAIP Dumps is experiencing a growing reputation among the candidates, the demand has become greater and greater, Drag you out of the confusion for SCAIP pass4sure exam test, SCAIP valid study guide will give you a better way to prepare for the actual test with its validity and reliability SCAIP questions & answers, Our testing engine version of SCAIP latest pdf dump is user-friendly, easy to install and upon comprehension of your SCAIP practice tests, so that it will be a data to calculate your final score which you can use as reference for the SCAIP real exam.

The choices are Cleared until first login, Account is locked, SCAIP No password—setuid only, and Normal Password, You are asked to develop an advanced program that will interact with users.

You need to prepare these Saviynt Certified Advanced IGA Professional (Level 200) SCAIP Exam Dumps to easily pass your exam, As DumpStillValid is experiencing a growing reputation among the candidates, the demand has become greater and greater.

Effective SCAIP Exam Reviews & Guaranteed Saviynt SCAIP Exam Success with Authoritative Useful SCAIP Dumps

Drag you out of the confusion for SCAIP pass4sure exam test, SCAIP valid study guide will give you a better way to prepare for the actual test with its validity and reliability SCAIP questions & answers.

Our testing engine version of SCAIP latest pdf dump is user-friendly, easy to install and upon comprehension of your SCAIP practice tests, so that it will be a data to calculate your final score which you can use as reference for the SCAIP real exam.
