## Useful Data-Architect Reliable Exam Tutorial to Obtain Salesforce Certification

Our Data-Architect exam torrent has a high quality that you can't expect. I think our Salesforce Certified Data Architect prep torrent

will help you save much time, and you will have more free time to do what you like to do. I can guarantee that you will have no regrets about using our Data-Architect Test Braindumps. When the time for action arrives, stop thinking and go in, try our Data-Architect exam torrent, you will find our products will be a very good choice for you.

## Salesforce Certified Data Architect Sample Questions (Q44-Q49):

### NEW QUESTION # 44

UC has been using SF for 10 years. Lately, users have noticed, that the pages load slowly when viewing Customer and Account list view.

To mitigate, UC will implement a data archive strategy to reduce the amount of data actively loaded.

Which 2 tasks are required to define the strategy? Choose 2 answers:

- A. Identify the recovery time objective.
- B. Identify the recovery point objective.
- C. Identify how the archive data will be accessed and used.
- D. Identify the data retention requirements

**Answer: C,D**

Explanation:

The two tasks required to define the data archive strategy are to identify how the archive data will be accessed and used, and identify the data retention requirements. Data archiving is the process of moving infrequently used or historical data from active storage to a separate storage location for long-term retention. Data archiving can improve performance, reduce storage costs, and comply with legal or regulatory obligations. To define a data archive strategy, a data architect needs to consider how the archived data will be accessed and used by different users or processes in Salesforce or outside Salesforce, and how long the archived data needs to be retained based on business or legal requirements.

### NEW QUESTION # 45

Get Cloud Consulting needs to integrate two different systems with customer records into the Salesforce Account object. So that no duplicate records are created in Salesforce, Master Data Management will be used.

An Architect needs to determine which system is the system of record on a field level.

What should the Architect do to achieve this goal?

- A. The database schema for each external system should be reviewed, and fields with different names should always be separate fields in Salesforce.
- B. Key stakeholders should review any fields that share the same purpose between systems to see how they will be used in Salesforce.
- C. Any field that is an input field in either external system will be overwritten by the last record integrated and can never have a system of record.
- D. Master Data Management systems determine system of record, and the Architect doesn't have to think about what data is controlled by what system.

**Answer: A**

### NEW QUESTION # 46

Universal Containers has a legacy system that captures Conferences and Venues. These Conferences can occur at any Venue. They create hundreds of thousands of Conferences per year. Historically, they have only used 20 Venues. Which two things should the data architect consider when denormalizing this data model into a single Conference object with a Venue picklist? Choose 2 answers

- A. Limitations on master -detail relationships.
- B. Org data storage limitations.
- C. Bulk API limitations on picklist fields.
- D. Standard list view in -line editing.

**Answer: C,D**

Explanation:

When denormalizing a data model into a single object with a picklist field, the data architect should consider the Bulk API limitations on picklist fields and the standard list view in-line editing. The Bulk API has a limit of 1,000 distinct picklist values per file, which

could be an issue if there are more than 1,000 venues in the future. The standard list view in-line editing allows users to edit multiple records at once, which could introduce data quality issues if the venue picklist is not validated or restricted<sup>2</sup>. The other options are not relevant to denormalizing a data model.

#### NEW QUESTION # 47

North Trail Outfitters (NTD) is in the process of evaluating big objects to store large amounts of asset data from an external system. NTO will need to report on this asset data weekly.

Which two native tools should a data architect recommend to achieve this reporting requirement?

- A. **Async SOQL with a custom object**
- B. Standard SOQL queries
- C. **Einstein Analytics**
- D. Standard reports and dashboards

**Answer: A,C**

#### NEW QUESTION # 48

The architect is planning a large data migration for Universal Containers from their legacy CRM system to Salesforce. What three things should the architect consider to optimize performance of the data migration?

Choose 3 answers

- A. Review the time zones of the User loading the data.
- B. **Remove custom indexes on the data being loaded.**
- C. **Defer sharing calculations of the Salesforce Org.**
- D. **Deactivate approval processes and workflow rules.**
- E. Determine if the legacy system is still in use.

**Answer: B,C,D**

Explanation:

Removing custom indexes on the data being loaded will prevent unnecessary index maintenance and improve the data load speed. Deferring sharing calculations of the Salesforce Org will avoid frequent sharing rule evaluations and reduce the load time.

Deactivating approval processes and workflow rules will prevent triggering any automation logic that might slow down or fail the data load.

#### NEW QUESTION # 49

.....

Our latest training material about Salesforce certification Data-Architect exam is developed by ActualPDF's professional team's constantly study the outline. It can help a lot of people achieve their dream. In today's competitive IT profession, if you want to stabilize your own position, you will have to prove your professional knowledge and technology level.
