Valid Test NGFW-Engineer Tips & Latest NGFW-Engineer Exam Dumps

DOWNLOAD the newest TestPDF NGFW-Engineer PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1chPxIsFPeyEJOGtl1FLOsaIdtwA3Z71k

The NGFW-Engineer desktop-based practice exam is compatible with Windows-based computers and only requires an internet connection for the first-time license validation. The web-based NGFW-Engineer practice test is accessible on any browser without needing to install any separate software. Finally, the NGFW-Engineer Dumps PDF is easily portable and can be used on smart devices or printed out. We constantly update the NGFW-Engineer pdf file to ensure customers receive the latest version of Palo Alto Networks NGFW-Engineer questions, based on the actual Palo Alto Networks Next-Generation Firewall Engineer (NGFW-Engineer) exam content.

We are intent on keeping up with the latest technologies and applying them to the NGFW-Engineer exam questions and answers not only on the content but also on the displays. Our customers have benefited from the convenience of state-of-the-art. That is why our pass rate on NGFW-Engineer practice quiz is high as 98% to 100%. The data are unique-particular in this career. With our NGFW-Engineer exam torrent, you can enjoy the leisure study experience as well as pass the NGFW-Engineer exam with success ensured.

2026 High Pass-Rate Valid Test NGFW-Engineer Tips | NGFW-Engineer 100% Free Latest Exam Dumps

Though there are three versions of the NGFW-Engineer practice braindumps: the PDF, Software and APP online, i love the PDF version the most for its printable advantage which is unique and special. After printing, you not only can bring the NGFW-Engineer study materials with you wherever you go, but also can make notes on the paper at your liberty, which may help you to understand the contents of our NGFW-Engineer Learning Materials. Do not wait and hesitate any longer, your time is precious!

Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	• Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.
Topic 2	• PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.

Topic 3	• PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active • active and active • passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPSec, quantum-resistant cryptography, and GRE tunnels.

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q50-Q55):

NEW QUESTION # 50

During an upgrade to the routing infrastructure in a customer environment, the network administrator wants to implement Advanced Routing Engine (ARE) on a Palo Alto Networks firewall.
Which firewall models support this configuration?

- A. PA-7050, PA-1420, VM-Series, CN-Series
- B. PA-455, VM-Series, PA-1410, PA-5450
- C. PA-5280, PA-7080, PA-3250, VM-Series
- D. PA-3260, PA-5410, PA-850, PA-460

Answer: D

Explanation:
The Advanced Routing Engine (ARE) is supported on Palo Alto Networks firewalls that utilize the PAN-OS 11.0+ software and have the required hardware architecture. The supported models include PA-3200 Series, PA-5400 Series, PA-800 Series, and PA-400 Series. These models provide enhanced routing capabilities, including BGP, OSPF, and more complex routing policies.
PA-3260 and PA-5410 are part of the PA-3200 and PA-5400 Series, which are known to support ARE.
PA-850 and PA-460 are within the PA-800 and PA-400 Series, which also support ARE

NEW QUESTION # 51

An NGFW policy allows general web browsing but blocks access to known malicious or high-risk websites.
Which NGFW security function is MOST directly responsible for this behavior?

- A. Antivirus scanning
- B. URL filtering
- C. Intrusion Prevention System (IPS)
- D. Network Address Translation (NAT)

Answer: B

Explanation:
URL filtering uses website categorization and reputation services to allow or block web access.

NEW QUESTION # 52

An organization requires a single security platform that integrates firewalling, VPN, intrusion prevention, and malware protection to simplify operations.
Which security concept BEST describes this approach?

- A. Unified Threat Management / NGFW
- B. Zero Trust Architecture
- C. Network micro-segmentation
- D. Defense in depth

Answer: A

Explanation:

NGFWs and UTM platforms combine multiple security functions into a single device, reducing complexity and improving manageability.

NEW QUESTION # 53

A large enterprise wants to implement certificate-based authentication for both users and devices, using an on-premises Microsoft Active Directory Certificate Services (AD CS) hierarchy as the primary certificate authority (CA). The enterprise also requires Online Certificate Status Protocol (OCSP) checks to ensure efficient revocation status updates and reduce the overhead on its NGFWs. The environment includes multiple Active Directory forests, Panorama management for several geographically dispersed firewalls, GlobalProtect portals and gateways needing distinct certificate profiles for users and devices, and strict Security policies demanding frequent revocation checks with minimal latency.

Which approach best addresses these requirements while maintaining consistent policy enforcement?

- A. Distribute the root and intermediate CA certificates via Panorama as shared objects to ensure all firewalls have a consistent trust chain. Configure OCSP responder profiles on each firewall to offload revocation checks to an internal OCSP server while keeping CRL checks as a fallback. Maintain separate certificate profiles for user and device authentication and use an automated enrollment method - such as Group Policy or SCEP - to deploy certificates to endpoints.
- B. Configure each firewall independently to trust the root and intermediate CA certificates. Rely only on manual CRL checks for certificate revocation, and import both user and device certificates directly into each firewall's local certificate store for authentication.
- C. Deploy self-signed certificates at each site to simplify local certificate validation and reduce dependencies on a centralized CA. Turn off certificate revocation checks for lower overhead, rely on IP-based rules for GlobalProtect authentication, and use a single certificate profile for both users and devices.
- D. Obtain wildcard certificates from a public CA for both user and device authentication, and configure firewalls to perform CRL polling at the default update interval. Manually install user certificates on endpoints and synchronize firewall certificate stores through frequent manual SSH updates to maintain consistency.

Answer: A

Explanation:
This approach best addresses the enterprise's requirements for certificate-based authentication, OCSP checks, and consistent policy enforcement:
Distributing the root and intermediate CA certificates via Panorama ensures that all firewalls in the enterprise are consistent in their trust chain and can validate certificates properly.
Configuring OCSP responder profiles on each firewall offloads the revocation checks to an internal OCSP server, which reduces the overhead on the firewalls and ensures fast, real-time certificate status checks.
Using CRL checks as a fallback ensures reliability in case the OCSP responder is unavailable.
Separate certificate profiles for users and devices ensure that the firewall can enforce different security policies based on the type of certificate (user vs. device).
Automated certificate enrollment methods such as Group Policy or SCEP streamline certificate distribution to endpoints, ensuring efficient management of certificates across geographically dispersed firewalls.

NEW QUESTION # 54

Which type of firewall resource can be assigned when configuring a new firewall virtual system (VSYS)?

- A. Memory
- B. Sessions limit
- C. ICPU
- D. Security profile limit

Answer: B

Explanation:
When configuring a new firewall virtual system (VSYS) on a Palo Alto Networks firewall, one of the resources that can be assigned is the sessions limit. This setting allows the administrator to control the number of active sessions that can be handled by the VSYS, ensuring that each virtual system has an appropriate allocation of resources based on its needs.

NEW QUESTION # 55

......

The price for NGFW-Engineer learning materials is quite reasonable, no matter you are a student or you are an employee in the company, and you can afford the expense. Besides, NGFW-Engineer exam braindumps of us is famous for the high-quality and accuracy. You can pass the exam just one time if you choose us. NGFW-Engineer Learning Materials contain both questions and answers, and you can know the answers right now after you finish practicing. We offer you free update for one year and the update version for NGFW-Engineer exam dumps will be sent to your email automatically.
