

# Free PDF 2026 Google - Associate-Cloud-Engineer - Test Google Associate Cloud Engineer Exam Score Report

Google Cloud Platform

Certification Details

Google Cloud Certified Associate Cloud Engineer

Prior Certification

Not Required

Exam Validity

2 Years

Exam Fee

\$125 USD

Exam Duration

120 minutes

No. of Questions

50 (Approx)

Passing Marks

70% (Approx)

Recommended Experience

6+ months hands-on experience with Google Cloud

Exam Format

Multiple Choice & Multiple Select

Languages

English, Japanese, Spanish, Portuguese, French, and German

Our product provides the demo thus you can have a full understanding of our Associate-Cloud-Engineer prep torrent. You can visit the pages of the product and then know the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the Associate-Cloud-Engineer test braindumps, the price of the product and the discount. There are also the introduction of the details and the guarantee of our Associate-Cloud-Engineer prep torrent for you to read. You can also know how to contact us and what other client's evaluations about our Associate-Cloud-Engineer test braindumps. The pages of our product also provide other information about our product and the exam.

For everyone, time is money and life. Are you still hesitant about selecting what kind of Associate-Cloud-Engineer exam materials? We have a high reputation on the career to help our customers pass their exams and get their desired certifications. There is no exaggeration to say that you can pass the Associate-Cloud-Engineer Exam with ease after studying with our Associate-Cloud-Engineer practice guide for 20 to 30 hours. Numerous of the candidates have been benefited from our exam torrent and they obtained the achievements just as they wanted.

## Exam Associate-Cloud-Engineer Dumps | Associate-Cloud-Engineer Reliable Test Labs

Everything needs a right way. The good method can bring the result with half the effort, the same different exam also needs the good test method. Our Associate-Cloud-Engineer study materials in every year are summarized based on the test purpose, every answer is a template, there are subjective and objective exams of two parts, we have in the corresponding modules for different topic of deliberate practice. To this end, our Associate-Cloud-Engineer Study Materials in the qualification exam summarize some problem-solving skills, and induce some generic templates.

To earn the Google Associate-Cloud-Engineer Certification, candidates need to have a good understanding of the GCP infrastructure, networking, and storage services. They should also have experience in deploying and managing applications on GCP. Google Associate Cloud Engineer Exam certification exam consists of multiple-choice questions and practical scenarios that test the candidate's knowledge and skills in these areas.

The Google Associate Cloud Engineer Exam certification exam is designed to provide candidates with a comprehensive understanding of Google Cloud technologies and their applications. It is an excellent way for candidates to demonstrate their proficiency in cloud computing and gain recognition for their expertise. Google Cloud technologies are rapidly growing in popularity, and the demand for skilled professionals who can manage and deploy cloud solutions is increasing.

## Google Associate Cloud Engineer Exam Sample Questions (Q197-Q202):

NEW QUESTION # 197

You have sensitive data stored in three Cloud Storage buckets and have enabled data access logging. You want to verify activities for a particular user for these buckets, using the fewest possible steps. You need to verify the addition of metadata labels and which files have been viewed from those buckets. What should you do?

- A. Create a trace in Stackdriver to view the information.
- B. Using the GCP Console, filter the Stackdriver log to view the information.
- **C. Using the GCP Console, filter the Activity log to view the information.**
- D. View the bucket in the Storage section of the GCP Console.

**Answer: C**

Explanation:

Audit logs meet the requirement:

Admin Activity logs: Entries for operations that modify the configuration or metadata of a project, bucket, or object.

Data Access logs: Entries for operations that modify objects or read a project, bucket, or object.

#### NEW QUESTION # 198

You need to manage a Cloud Spanner Instance for best query performance. Your instance in production runs in a single Google Cloud region. You need to improve performance in the shortest amount of time. You want to follow Google best practices for service configuration. What should you do?

- A. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 65%.  
If you exceed this threshold, add nodes to your instance
- B. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 45%.  
Use database query statistics to identify queries that result in high CPU usage, and then rewrite those queries to optimize their resource usage
- C. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 65%.  
Use database query statistics to identify queries that result in high CPU usage, and then rewrite those queries to optimize their resource usage.
- **D. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 45%.  
If you exceed this threshold, add nodes to your instance.**

**Answer: D**

#### NEW QUESTION # 199

You deployed an App Engine application using gcloud app deploy, but it did not deploy to the intended project. You want to find out why this happened and where the application deployed. What should you do?

- A. Check the web-application.xml file for your application and check project settings.
- B. Go to Cloud Shell and run gcloud config list to review the Google Cloud configuration used for deployment.
- **C. Check the app.yaml file for your application and check project settings.**
- D. Go to Deployment Manager and review settings for deployment of applications.

**Answer: C**

#### NEW QUESTION # 200

You have deployed an application on a Compute Engine instance. An external consultant needs to access the Linux-based instance. The consultant is connected to your corporate network through a VPN connection, but the consultant has no Google account. What should you do?

- A. Instruct the external consultant to generate an SSH key pair, and request the private key from the consultant. Add the private key to the instance yourself, and have the consultant access the instance through SSH with their public key.
- B. Instruct the external consultant to use the gcloud compute ssh command line tool by using the public IP address of the instance to access it.
- C. Instruct the external consultant to use the gcloud compute ssh command line tool by using Identity-Aware Proxy to access the instance.
- **D. Instruct the external consultant to generate an SSH key pair, and request the public key from the consultant. Add the public key to the instance yourself, and have the consultant access the instance through SSH with their private key.**

**Answer: D**

Explanation:

The best option is to instruct the external consultant to generate an SSH key pair, and request the public key from the consultant. Then, add the public key to the instance yourself, and have the consultant access the instance through SSH with their private key. This way, you can grant the consultant access to the instance without requiring a Google account or exposing the instance's public IP address. This option also follows the best practice of using user-managed SSH keys instead of service account keys for SSH access<sup>1</sup>.

Option A is not feasible because the external consultant does not have a Google account, and therefore cannot use Identity-Aware Proxy (IAP) to access the instance. IAP requires the user to authenticate with a Google account and have the appropriate IAM permissions to access the instance<sup>2</sup>. Option B is not secure because it exposes the instance's public IP address, which can increase the risk of unauthorized access or attacks. Option D is not correct because it reverses the roles of the public and private keys. The public key should be added to the instance, and the private key should be kept by the consultant. Sharing the private key with anyone else can compromise the security of the SSH connection<sup>3</sup>.

### NEW QUESTION # 201

A Solutions Architect is designing a three-tier web application that will allow customers to upload pictures from a mobile application. The application will then generate a thumbnail of the picture and return a message to the user confirming that the image was successfully uploaded. Generation of the thumbnail may take up to 5 seconds. To provide a sub second response time to the customers uploading the images, the Solutions Architect wants to separate the web tier from the application tier. Which service would allow the presentation tier to asynchronously dispatch the request to the application tier?

- A. Amazon SNS
- B. AWS Lambda
- C. Amazon SQS
- **D. AWS Step Functions**

**Answer: D**

### NEW QUESTION # 202

.....

Subjects are required to enrich their learner profiles by regularly making plans and setting goals according to their own situation, monitoring and evaluating your study. Because it can help you prepare for the Associate-Cloud-Engineer exam. If you want to succeed in your exam and get the related exam, you have to set a suitable study program. If you decide to buy the Associate-Cloud-Engineer reference materials from our company, we will have special people to advise and support you. Our staff will also help you to devise a study plan to achieve your goal. We believe that if you purchase Associate-Cloud-Engineer Test Guide from our company and take it seriously into consideration, you will gain a suitable study plan to help you to pass your exam in the shortest time.
