We all know that Web-Development-Applications study materials can help us solve learning problems. But if it is too complex, not only can't we get good results, but also the burden of students' learning process will increase largely. Unlike those complex and esoteric materials, our Web-Development-Applications Study Materials are not only of high quality, but also easy to learn. Our study materials do not have the trouble that users can't read or learn because we try our best to present those complex and difficult test sites in a simple way.

WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.
Topic 2	<ul style="list-style-type: none">• Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.
Topic 3	<ul style="list-style-type: none">• Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.
Topic 4	<ul style="list-style-type: none">• HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.

Pass Guaranteed High Pass-Rate WGU - Valid Web-Development-Applications Test Notes

The above formats of LatestCram are made to help customers prepare as per their unique styles and crack the Web-Development-Applications exam certification on the very first attempt. Our WGU Web Development Applications (Web-Development-Applications) questions product is getting updated regularly as per the original WGU Web Development Applications (Web-Development-Applications) practice test's content. So that customers can prepare according to the latest Web-Development-Applications exam content and pass it with ease.

WGU Web Development Applications Sample Questions (Q72-Q77):

NEW QUESTION # 72

What does a computer use to read and execute JavaScript code?

- A. An interpreter
- B. A compiler
- C. A virtual machine
- D. A validator

Answer: A

Explanation:

(Same as Question 29)

JavaScript engines read and execute scripts using an interpreter, though JIT compilation may occur under the hood.

References:

- * MDN Web Docs: JavaScript Engine
- * ECMAScript Language Specification

NEW QUESTION # 73

Which CSS transformation method should a developer use to reposition an element horizontally on the 2-D plane?

- A. `TranslateX(n)`
- B. `ScaleX(n)`
- C. `Scale(x,y)`
- D. `SkewX(angle)`

Answer: A

Explanation:

The `translateX(n)` method in CSS is used to move an element horizontally on the 2-D plane by a specified distance. This transformation repositions the element along the X-axis.

* `translateX(n)` Method: The `translateX(n)` function moves an element horizontally by `n` units. Positive values move the element to the right, while negative values move it to the left.

* Usage Example:

```
element {  
  transform: translateX(100px);  
}
```

In this example, the element is moved 100 pixels to the right.

* Properties:

* `n`: This represents the distance to move the element. It can be specified in various units such as pixels (px), percentages (%), ems (em), etc.

References:

- * MDN Web Docs on transform
- * W3C CSS Transforms Module Level 1

NEW QUESTION # 74

Given the following JavaScript code:

```
var x;  
x = 6;  
document.getElementById("demo").innerHTML = x;
```

What happens when this code is executed?

- A. The object with the id innerHTML is changed to 6.
- B. The object with the id innerHTML is changed to x.
- C. The object with the id demo is changed to x.
- **D. The object with the demo is changed to 6.**

Answer: D

Explanation:

The provided JavaScript code sets a variable `x` to 6 and then assigns this value to the `innerHTML` of the HTML element with the id `demo`.

```
var x;  
x = 6;  
document.getElementById("demo").innerHTML = x;
```

Explanation:

* Variable Declaration: `var x;` declares the variable `x`.

* Variable Assignment: `x = 6;` assigns the value 6 to the variable `x`.

* DOM Manipulation: `document.getElementById("demo").innerHTML = x;` finds the element with id `demo` and sets its `innerHTML` to the value of `x`, which is 6.

Outcome:

* The content of the HTML element with the id `demo` will be changed to 6.

W3C JavaScript DOM Manipulation

NEW QUESTION # 75

What allows a scripting language to manipulate elements on a web page?

- A. XML
- **B. DOM**
- C. HTML
- D. CSS

Answer: B

Explanation:

The Document Object Model (DOM) is an API for HTML and XML documents that defines the logical structure of documents and the way a document is accessed and manipulated.

* DOM Explanation:

* The DOM represents the page so that programs can change the document structure, style, and content.

* It provides a way for scripts to update the content, structure, and style of a document while it is being viewed.

* Explanation:

* Option A: CSS is incorrect because it is used for styling web pages.

* Option B: XML is incorrect because it is a markup language, not an API for manipulating web page elements.

* Option C: HTML is incorrect because it is the markup language used to create web pages, not an API for manipulation.

* Option D: DOM is correct because it allows a scripting language to manipulate elements on a web page.

* References:

* MDN Web Docs - DOM

* W3Schools - JavaScript HTML DOM

NEW QUESTION # 76

Which line of code creates a field that is displayed as a text box with up-and-down arrows and accepts a numeric value of less than 100?

- **A. `<input type="number" name="experience" max="100">`**

- B. `<input type="range" name="experience" max="100">`
- C. `<input type="number" name="experience" maxlength="100">`
- D. `<input type="range" name="experience" maxlength="100">`

Answer: A

Explanation:

> "`<input type="number">`" renders a numeric text box with spinner (up/down arrows). The `max="100"` attribute sets the upper limit for the value that can be entered." Example:

```
```html
<input type="number" max="100">
```
```

> `maxlength` only limits string length, not numeric value.

References:

- * MDN Web Docs: `<input type="number">`
- * HTML Specification: number input constraints

NEW QUESTION # 77

.....

Our experts have worked hard for several years to formulate Web-Development-Applications exam braindumps for all examiners. Our Web-Development-Applications study materials not only target but also cover all knowledge points. And our practice materials also have a statistical analysis function to help you find out the deficiency in the learning process of Web-Development-Applications practice materials, so that you can strengthen the training for weak links. In this way, you can more confident for your success since you have improved your ability.
