1.Exhibit.

Which would explain this issue?

- A. HTTPS wildcard certificates are not supported
- B. HTTPS certificate is not required in ClearPass Guest.
- C. captiveportal-login aruba-training.com needs to be entered in the Address field for the ClearPass Guest
- D. \*.aruba-training.com needs to be entered in the Address field for the ClearPass Guest

**Answer: D**

**Explanation:**  
The correct address for the ClearPass Guest should match the FQDN of the HTTPS certificate installed on the device, which is often the FQDN of the vendor's product. This ensures secure and proper redirection to the captive portal during the authentication process. The FQDN should be entered in the Address field for ClearPass Guest configuration.

2.A customer is evaluating device profiles on a CX 6300 switch.  
The test device has the following attributes:  
• MAC address = 81:cd:93:13:ab:31  
• LLDP sys-desc = iotcontroller  
The test device is being assigned to the "iot-dev" role. However, the customer requires the "iot-prod" role to be applied.

```
mac-group iot
  seq 10 match mac-mui 81:cd:93
port-access lldp-group iot-lldp
  seq 10 match sys-desc iot
port-access cdp-group iot-cdp
  seq 10 match platform accesspoint

port-access device-profile iot-dev
  associate role iot-dev
  associate lldp-group iot-lldp
port-access device-profile iot-prod
  associate role iot-prod
  associate mac-group iot
port-access device-profile iot-test
  associate role iot-test
  associate cdp-group iot-cdp
```

Given the configuration, what is causing the "iot-dev" role to be applied to the device?

- A. The test device does not support CDP.
