Reliable IDP Valid Exam Testking bring you the best IDP Valid Dumps Book for CrowdStrike CrowdStrike Certified Identity Specialist(CCIS) Exam

The IDP Practice Questions are designed and verified by experienced and renowned CrowdStrike Certified Identity Specialist(CCIS) Exam exam trainers. They work collectively and strive hard to ensure the top quality of TestValid IDP exam practice questions all the time. The IDP Exam Questions are real, updated, and error-free that helps you in CrowdStrike Certified Identity Specialist(CCIS) Exam exam preparation and boost your confidence to crack the upcoming IDP exam easily.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	• Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.
Topic 2	• Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.

Topic 3	• Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.
Topic 4	• Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom • templated • scheduled workflows, branching logic, and loops.
Topic 5	• Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.
Topic 6	• GraphQL API: Covers Identity API documentation, creating API keys, permission levels, pivoting from Threat Hunter to GraphQL, and building queries.
Topic 7	• Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling • disabling rules, applying changes, and required Falcon roles.
Topic 8	• User Assessment: Examines user attributes, differences between users • endpoints • entities, risk baselining, risky account types, elevated privileges, watchlists, and honeytoken accounts.

CrowdStrike IDP Valid Exam Testking | Useful CrowdStrike IDP Valid Dumps Book: CrowdStrike Certified Identity Specialist(CCIS) Exam

Our company has spent more than 10 years on compiling IDP study materials for the exam in this field, and now we are delighted to be here to share our study materials with all of the candidates for the exam in this field. There are so many striking points of our IDP Preparation exam. If you just free download the demos of the IDP learning guide, then you can have a better understanding of our products. The demos are a little part of the exam questions and answers for you to check the quality and validity.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38
Which option can be selected from the Threat Hunter menu to open the current Threat Hunter query in a new window as Graph API format?

- A. Save as Custom Report
- B. Save as Custom Query
- C. Export to API Builder
- D. Open Query in API Builder

Answer: D

Explanation:
Falcon Threat Hunter provides a direct integration with the API Builder to support advanced investigation workflows and automation. According to the CCIS curriculum, analysts can take an existing Threat Hunter query and convert it into a GraphQL-compatible format by selecting Open Query in API Builder from the Threat Hunter menu.
This option opens the current query in a new window within API Builder, automatically translating the query structure into GraphQL syntax where applicable. This enables security teams to reuse validated hunting logic for automation, reporting, or external integrations without rewriting queries from scratch.
The other menu options serve different purposes:
* Export to API Builder is not a valid menu action.
* Save as Custom Query stores the query for reuse inside Threat Hunter.

* Save as Custom Reportgenerates a reporting artifact, not an API query.
BecauseOpen Query in API Builderis the only option that opens the query in GraphQL format in a new window,Option Dis the correct and verified answer.

NEW QUESTION # 39
Which of the following isNOTan available Goal within the Domain Security Overview?

- A. AD Hygiene
- B. Pen Testing
- C. Privileged Users Management
- D. Business Privileged Users Management

Answer: D

Explanation:
The Domain Security Overview in Falcon Identity Protection usesGoalsto frame identity risks into focused security assessment perspectives. These goals allow organizations to evaluate identity posture based on specific security priorities such as directory hygiene, privilege exposure, or overall attack surface reduction.
According to the CCIS curriculum, theavailable GoalsincludePrivileged Users Management,AD Hygiene, Pen Testing, andReduce Attack Surface. These goals are predefined by CrowdStrike and determine how risks are grouped, weighted, and presented in reports.
Business Privileged Users Managementisnot an available Goalwithin the Domain Security Overview.
While Falcon Identity Protection does support the concept ofbusiness privilegesand evaluates their impact on users and entities, this concept is handled through risk analysis and configuration-not as a selectable Domain Security Goal.
The CCIS documentation clearly distinguishes betweenGoals(which control reporting and assessment views) andbusiness privilege modeling(which influences risk scoring). Therefore,Option Bis the correct and verified answer.

NEW QUESTION # 40
Which of the following IDaaS connectors will allow Identity to ingest cloud activity along with applying SSO Policy?

- A. SAML
- B. ADFS
- C. Okta SSO
- D. Azure NPS

Answer: C

Explanation:
Falcon Identity Protection integrates withIdentity-as-a-Service (IDaaS)providers to ingest cloud authentication activity and enforce identity-based policies. According to the CCIS curriculum,Okta SSOis a supported IDaaS connector that enables Falcon to ingestcloud authentication eventswhile also applying Single Sign-On (SSO) policies.
Okta SSO provides rich identity telemetry, including login attempts, device context, and authentication outcomes. This data allows Falcon Identity Protection to correlate on-premises and cloud-based identity activity, extending identity risk analysis beyond Active Directory.
The other options are incorrect:
* ADFSis an on-premises federation service, not a cloud IDaaS.
* Azure NPSis used for RADIUS-based MFA, not SSO ingestion.
* SAMLis a protocol, not an IDaaS connector.
Because Okta SSO provides both cloud activity ingestion and SSO enforcement,Option Bis the correct and verified answer.

NEW QUESTION # 41
Which of the following users would most likely have aHIGHrisk score?

- A. User that recently logged in from a shared endpoint
- B. User that has not logged in recently and is marked as Stale
- C. User that is a member of the Domain Admins group
- D. Privileged user with a Compromised Password

Answer: D

Explanation:
Falcon Identity Protection calculates user risk scores based on a combination of privilege level, credential exposure, and behavioral indicators. According to the CCIS curriculum, a privileged user with a compromised password represents one of the highest-risk identity scenarios.
Privileged accounts-such as administrators or service accounts with elevated access-already pose increased risk due to their access scope. When Falcon detects that such an account's credentials have been compromised, the risk escalates significantly because attackers can immediately gain high-impact access without further escalation.
The other options do not inherently represent the same level of risk:
* Logging in from a shared endpoint may increase risk but is context-dependent.
* Stale users are risky but typically lower risk than active compromised credentials.
* Domain Admin group membership alone does not imply compromise.
Because credential compromise combined with privilege dramatically increases attack potential, Option B is the correct and verified answer.

NEW QUESTION # 42
Any countries or regions included in the _ will trigger a geolocation detection.

- A. Allowlist
- B. Exclusion
- C. Dictionary
- D. Blocklist

Answer: D

Explanation:
Falcon Identity Protection supports geolocation-based detections to identify potentially risky authentication activity originating from unexpected or prohibited locations. According to the CCIS curriculum, any countries or regions added to the Blocklist will automatically trigger a geolocation-based detection when authentication traffic is observed from those locations.
The Blocklist is designed to explicitly define disallowed geographic regions. When an authentication attempt originates from a blocklisted country or region, Falcon treats the activity as suspicious and generates a detection or contributes to increased identity risk.
By contrast:
* An Allowlist defines approved locations and suppresses detections.
* A Dictionary is used for password-related analysis.
* An Exclusion suppresses detections rather than generating them.
Because geolocation detections are triggered by blocklisted locations, Option A is the correct answer.

NEW QUESTION # 43
......

TestValid IDP desktop and web-based practice exams are distinguished by their excellent features. The IDP web-based practice exam is supported by all operating systems and can be taken through popular browsers including Chrome, MS Edge, Internet Explorer, Opera, Firefox, and Safari. Windows computers can run the desktop CrowdStrike IDP Practice Test software. You won't require a live internet connection to use the desktop CrowdStrike exam simulation software once you've verified the product's license.
