## Authentic Microsoft AZ-400 Exam Hub | AZ-400 Exam Syllabus

Another challenge is staying on top of the ever-changing exam content. Microsoft AZ-400 is constantly evolving, and it can be difficult to know what to expect on test day. Our Microsoft AZ-400 practice tests and PDF are updated regularly to reflect the latest Microsoft AZ-400 Exam Format and content, so you can be confident that you are studying the most up-to-date AZ-400 exam information.

Microsoft AZ-400 (Designing and Implementing Microsoft DevOps Solutions) Exam is an advanced level certification exam that validates the skills and knowledge required to design and implement DevOps solutions on the Microsoft Azure platform. Designing and Implementing Microsoft DevOps Solutions certification focuses on testing the candidate's ability to manage, deploy and streamline the software development lifecycle using a combination of tools, technologies and processes.

The AZ-400 Certification Exam is designed for individuals who are responsible for designing and implementing DevOps solutions using Microsoft technologies. AZ-400 exam tests the candidate's ability to develop a DevOps strategy, create and implement a DevOps pipeline, and manage and monitor the DevOps environment. Candidates should have a deep understanding of Azure DevOps, Azure solutions, and other Microsoft technologies.

## Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q321-Q326):

### NEW QUESTION # 321

You need to configure a cloud service to store the secrets required by the mobile applications to call the share. What should you include in the solution? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:  
  
Explanation

Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.

Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTPS.

The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.

### NEW QUESTION # 322

You need to deploy Internet Information Services (IIS) to an Azure virtual machine that runs Windows Server 2019.

How should you complete the Desired State Configuration (DSQ) configuration script? To answer, drag the appropriate values to the correct locations. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation

Box 1: Configuration

The following example shows a simple example of a configuration.

configuration IISInstall

{

node "localhost"

{

WindowsFeature IIS

{

Ensure = "Present"

Name = "Web-Server"

}

}

}

Box 2: WindowsFeature
