2026 Microsoft PL-400: Microsoft Power Platform Developer High Hit-Rate Exam Topic

The APP online version of our PL-400 real exam boosts no limits for the equipment being used and it supports any electronic

equipment and the off-line use. If only you open it in the environment with the network for the first time you can use our PL-400 Training Materials in the off-line condition later. It depends on the client to choose the version they favor to learn our PL-400 study materials.

Microsoft PL-400 Certification Exam is designed for professionals who want to demonstrate their expertise in developing solutions on the Microsoft Power Platform. PL-400 exam is one of the most sought-after certifications in the IT industry and is a great way to showcase your skills and knowledge. Passing PL-400 Exam validates that you are proficient in creating and implementing solutions on the Power Platform.

Microsoft Power Platform Developer Sample Questions (Q16-Q21):

NEW QUESTION # 16

You are creating a model-driven app.

Users need to see only the entities in the app navigation that are relevant to their role and their method of accessing the app.

You need to restrict entities on the sub-areas in the SiteMap.

Which properties should you use? To answer, drag the appropriate properties to the correct requirements. Each property may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Properties	Requirement	Property
Client	Ensure that the entity is visible only if the user can create records.	
Offline Availability	Ensure that the entity is not visible if the user is using an on-premises deployment.	
Privileges		
SKUs	Ensure that the entity is visible only if the user is accessing the app with a web browser.	

Answer:

Explanation:

Properties	Requirement	Property
Client	Ensure that the entity is visible only if the user can create records.	Privileges
Offline Availability	Ensure that the entity is not visible if the user is using an on-premises deployment.	SKUs
Privileges		Client
SKUs	Ensure that the entity is visible only if the user is accessing the app with a web browser.	

Explanation:

Properties	Requirement	Property
Client	Ensure that the entity is visible only if the user can create records.	Privileges
Offline Availability	Ensure that the entity is not visible if the user is using an on-premises deployment.	SKUs
Privileges		Client
SKUs	Ensure that the entity is visible only if the user is accessing the app with a web browser.	

Box 1: Privileges

Privileges: This defines whether a subarea is displayed based on privileges available in any security roles that are assigned to the user.

Box 2: SKU

SKUs: Select the versions of Dynamics 365 that display this subarea.

Box 3: Client

Client: Select the type of client that displays this subarea.

NEW QUESTION # 17

A company must copy customer account data changes from a Common Data Service (CDS) instance into an external system.

Azure Storage Queues are used to pass the changes from CDS to the external system.

You have the following code. (Line numbers are included for reference only.)

```
2 token = ProcessAccountChanges(_service, token, changeQueue, deleteQueue);
3 ...
4 token = ProcessAccountChanges(_service, token, changeQueue, deleteQueue);
5 ...
6 private static string ProcessAccountChanges(IOrganizationService orgservice,
7 string token, CloudQueue changeQueue, CloudQueue deleteQueue)
8 {
9     var request = new RetrieveEntityChangeRequest();
10    request.EntityName = "account";
11    request.Columns = new ColumnSet("name", "accountnumber", "creditlimit",
12    "ownerid");
13    request.DataVersion = token;
14    RetrieveEntityChangeResponse response = (RetrieveEntityChangeResponse)
15    orgservice.Execute(request);
16    token = response.EntityChanges.DataToken;
17    foreach (var change in response.EntityChanges.Changes)
18    {
19        if (change.Type == ChangeType.NewOrUpdated)
20        {
21            var changedItem = (NewOrUpdatedItem) change;
22            Entity newOrChangedEntity = (Entity) changedItem.NewOrUpdatedEntity;
23            CloudQueueMessage changemessage = new CloudQueueMessage
24            newOrChangedEntity.Id.ToString();
25            changeQueue.AddMessage(changemessage);
26        }
27        else if (change.Type == ChangeType.RemoveOrDeleted)
28        {
29            var deleteditem = (RemoveOrDeletedItem) change;
30            EntityReference deletedEntityReference = deleteditem.RemovedItem;
31            CloudQueueMessage deletemessage = new CloudQueueMessage
32            deletedEntityReference.Id.ToString();
33            deleteQueue.AddMessage(deletemessage);
34        }
35    }
36    return token;
37 }
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statement	Yes	No
The first call to ProcessAccountChanges at line 2 adds changes made to account records to the storage queues.	<input type="radio"/>	<input type="radio"/>
The second call to ProcessAccountChanges at line 4 adds changes made to account records to the storage queues.	<input type="radio"/>	<input type="radio"/>
The messages in changeQueue specify whether the accounts are new or updated.	<input type="radio"/>	<input type="radio"/>
A message is added to deleteQueue if an account is created and subsequently deleted at line 3.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statement	Yes	No
The first call to ProcessAccountChanges at line 2 adds changes made to account records to the storage queues.	<input checked="" type="radio"/>	<input type="radio"/>
The second call to ProcessAccountChanges at line 4 adds changes made to account records to the storage queues.	<input checked="" type="radio"/>	<input type="radio"/>
The messages in changeQueue specify whether the accounts are new or updated.	<input type="radio"/>	<input checked="" type="radio"/>
A message is added to deleteQueue if an account is created and subsequently deleted at line 3.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION # 18

A company has a Common Data Service (CDS) environment. The company creates model-driven apps for different sets of users to allow them to manage and monitor projects.

Finance team users report that the current app does not include all the entities they require and that the existing project form is missing cost information. Cost information must be visible only to finance team users.

You create a security role for finance team users.

You need to create a new app for finance team users.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer Area

Edit the Project main form. Select **Save As** to create a new Finance Form, add the missing cost fields and remove the fields not relevant to Finance.

In the Maker portal, share the Finance app and select the Finance Security role.

Create a new model-driven app. Add the project entity, and select the Finance Security role.

Create a new model-driven app. Add the project entity, and select the Finance form.

Enable security roles and select the Finance Security role on the Finance form.

Select the Finance app from the My Apps page and configure the app to use the Finance Security role.

Answer:

Explanation:

Answer Area

 Edit the Project main form. Select Save as..

Create a new model-driven app. Add the project entity, and select the Finance form.

Enable security roles and select the Finance Security role on the Finance

In the Maker portal, share the Finance app and select the Finance Security role.

- 1 - Edit the Project main form. Select Save as..
 - 2 - Create a new model-driven app. Add the project entity, and select the Finance form.
 - 3 - Enable security roles and select the Finance Security role on the Finance
 - 4 - In the Maker portal, share the Finance app and select the Finance Security role.

NEW QUESTION # 19

You manage a Microsoft Power Automate cloud flow. The cloud flow queries Microsoft Dataverse data by using the List rows action.

You need to configure the cloud flow to process 10,000 records in a single run.

What should you do? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Turn on pagination and set the threshold to 10,000.
- B. Create the query by using FetchXML and set the top parameter to 10,000.
- C. Set the row count parameter to 10,000.
- D. Return the first 5,000 records and use the @odata.nextlink in the response to return the remaining records.

Answer: A,D

NEW QUESTION # 20

You need to address the user interface issues.

What should you do? To answer, drag the appropriate actions to the correct issues. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Actions	Requirement	Action
Add &ribbondebug=true to the end of the application URL.	Resolve rendering issue for New and Save buttons.	<input type="text"/>
Export the XML file.		
Modify the RibbonWSS.xsd file.	Add email button for registration form.	
Use Ribbon Workbench.		

Answer:

Explanation:

Actions

Requirement

Action

- Add &ribbondebug=true to the end of the application URL.
- Export the XML file.
- Modify the RibbonWSS.xsd file.
- Use Ribbon Workbench.

- Resolve rendering issue for New and Save buttons.
- Add email button for registration form.

- Add &ribbondebug=true to the end of the application URL.
- Use Ribbon Workbench.

Explanation:

Requirement

ACTION

Resolve rendering issue for New and Save buttons.

Add &ribbondebug=true to the end of the application URL.

Add email button for registration form.

Use Ribbon Workbench.

Box 1: Add &ribbondebug=true to the end of the application URL.

Scenario: The captions for the New and Save buttons do not render properly on the form.

You can use the an in-app tool called the Command Checker to inspect the ribbon component definitions to help us determine why the button is not rendered correctly.

To enable the Command Checker, you must append a parameter &ribbondebug=true to your D365 application URL. For example:

https://yourorgname.crm.dynamics.com/main.aspx?appid=9ab590fc-d25e-ea11-a81d-000d3ac2b3e6&ribbondebug=true

Box 2: Use the Ribbon Workbench

Adding Buttons to Ribbons

- * Download and install Ribbon Workbench.
- * Select a suitable ICON for your button.
- * Create a solution.
- * Edit the button in Ribbon Workbench.
- * Publish and test.
