- A. Activity 9005.
- B. Activity 10002.

- C. Activity 11001.
- D. There is no driving activity for Activity 10001 in the backward pass.

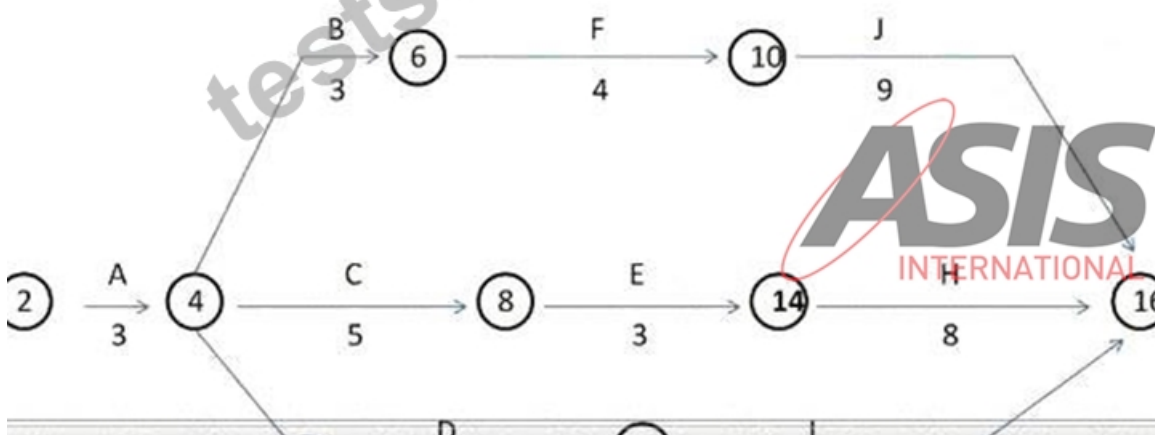

Answer: A

NEW QUESTION # 126

The activity with the most total float is:

Refer to the following table and diagram to answer the following questions. Consider this to be the entire network. The diagram is incomplete. This table represents activities, predecessors and durations for a hazardous waste incineration facility.

Activity	Description	Predecessors	Duration (months)
A	Develop information for public hearings	-	3
B	Hold public hearings	A	3
C	Develop draft plans and specifications	A	5
D	Contact stakeholders and others	A	7
E	Obtain permits	B, C	3
F	Order equipment for facility	B	4
G	Procure and prepare land.	B	6
H	Construct facility	D, E, F & G	8
I	Approval of operating procedures	D	6
J	Install equipment, staff, faculty	F	9

- A. Activity F.
- B. Activity C.
- C. Activity I.
- D. Activity D.

Answer: A

Explanation:

Understand Total Float:

Total float is the amount of time an activity can be delayed without affecting the project completion date.

Review the Network Diagram and Logic:

- * Activity F is not on the critical path, which allows for flexibility.
- * Analyzing the paths and slack in the diagram confirms that Activity F has the most total float.

Cross-Verification:

- * Option A: Incorrect. Activity I is on the critical path with no float.
- * Option B: Incorrect. Activity C is not the most flexible.
- * Option D: Incorrect. Activity D has limited slack.

* Option C: Correct. Activity F has the maximum total float.

NEW QUESTION # 127

When using _____, computers must ensure that there is no traffic on the network before they are allowed to transmit information.

- A. None of the above
- **B. Ethernet protocol**
- C. Buses
- D. File Transfer protocol

Answer: B

NEW QUESTION # 128

If Activity A was delayed 5 days from starting, which of the following adjustments will NOT maintain the completion date of Activity C at Day 40?

- A. Replace the relationship from 'B' to 'C' with SSO
- **B. Reduce the duration of 'A' from 20 days to 10 days and replace the relationship from 'B' to 'C' with FSO.**
- C. Reduce the duration of 'B' from 10 days to 5 days by compressing work effort

Answer: B

Explanation:

Understanding the Problem Context:

* Activity C is currently set to complete on Day 40.

* Activity A has a 5-day delay in starting, so adjustments are needed to maintain the Day 40 completion date for Activity C.

* The key is to identify which adjustment will fail to maintain the timeline.

Option-by-Option Analysis:

* A. Reduce the duration of 'A' from 20 days to 10 days and replace the relationship from 'B' to 'C' with FSO (Finish-to-Start with Offset):

* Reducing Activity A's duration from 20 to 10 days might mitigate part of the delay, but replacing the relationship between B and C with FSO introduces an offset.

* FSO relationships typically delay the start of successor activities (Activity C in this case).

* This would likely push Activity C beyond Day 40 because the delay in B's finish, coupled with the offset, would result in C starting later.

* This adjustment does NOT maintain the completion date of Activity C.

* B. Replace the relationship from 'B' to 'C' with SSO (Start-to-Start with Offset):

* An SSO relationship allows Activity C to begin once Activity B starts (with or without an offset).

* This adjustment effectively overlaps the schedules of B and C, mitigating delays from A.

* This adjustment can maintain the completion date of Activity C at Day 40.

* C. Reduce the duration of 'B' from 10 days to 5 days by compressing work effort:

* Reducing B's duration by compressing its schedule shortens its timeline, allowing Activity C to start sooner.

* This adjustment offsets the delay caused by Activity A.

* This adjustment can maintain the completion date of Activity C at Day 40.

Final Answer and Justification:

* The adjustment described in A will NOT maintain the completion date of Activity C at Day 40 because the FSO relationship introduces delays, making it ineffective in this scenario.

* Options B and C offer feasible adjustments to maintain the timeline.

Study Guide Reference:

* Refer to the PSP Certification Study Guide, Chapter 2 - Scheduling, Subchapter 2.2.4: Relationships (p. 151-157), which details the impact of logical relationships (FSO, SSO) on schedule timelines.

* Additionally, review AACE Recommended Practice 52R-06: Time Impact Analysis for insights into how delays affect dependent activities and methods for mitigating them.

NEW QUESTION # 129
