You won't miss any information that you need to pass the exam.

ServiceNow Certified Implementation Specialist - Strategic Portfolio Management Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which role should be assigned to a user so they can read and retrieve data from any table of the Release Management application to generate reports?

- A. Release user
- B. Release admin
- C. Project manager
- D. Business stakeholder

Answer: D

Explanation:

Explanation

According to the Product Documentation for ServiceNow, the business stakeholder role (rm_business_stakeholder) can read and retrieve data from any table of the Release Management application to generate reports. This role can also view the release dashboard, release calendar, and release roadmap. The other roles have different levels of access and permissions for the Release Management application. You can find more information about the roles and responsibilities for Release Management in the Product Documentation for ServiceNow.

NEW QUESTION # 26

Which table stores daily capacity of a user?

- A. Resource_Aggregate_Daily.
- B. Resource_Event.
- C. Resource_Allocation_Daily.
- D. User Profile.

Answer: A

NEW QUESTION # 27

When can a user choose from multiple rate types for their work, while logging a time card?

- A. Only if the capability is enabled in the Time Sheet Policies
- B. Only one (1) rate type can apply
- C. Only if this capability is enabled in the Project Record
- D. Only if the capability is enabled in the Project Preferences

Answer: A

Explanation:

According to the Using rate types and labor rate cards document, a user can choose from multiple rate types for their work, while logging a time card, only if the capability is enabled in the Time Sheet Policies. This capability allows users to select different rate types for different tasks, such as standard, overtime, or travel. The other options are not correct, as they are not the places where the capability can be enabled. The Project Record is used to create and update project details, such as name, description, and state. The Project Preferences are used to set the default values for project fields, such as number, type, and priority. The option C is not correct, as more than one rate type can apply if the capability is enabled.

NEW QUESTION # 28

Which property controls the changes in cost and resource plans with respect to the change in the start date of a demand or project?

- A. 'Change Resource Plan, Cost Plan and Benefit Plan Start Date with Demand or Project Start Date Change'.
- B. 'Calculate ROI percentage based on a project's estimated cost and its net value'.
- C. 'Rollup project start date from tasks'.
- D. 'Enable altering of planned date for task in WIP/Closed'.

Answer: A

Explanation:

According to the ServiceNow documentation¹, this property controls whether the start dates of the resource plan, cost plan, and benefit plan are automatically updated when the start date of the demand or project is changed. If this property is set to true, then the plans will be shifted by the same number of days as the demand or project start date change. If this property is set to false, then the plans will not be affected by the demand or project start date change.

NEW QUESTION # 29

Which of the following can be used to calculate planned cost when creating a resource plan?

Choose 2 answers

- A. Project rate
- B. Rate card
- C. Default rate
- D. Demand rate

Answer: A,B

Explanation:

According to the ServiceNow documentation¹, a rate card is a table that defines the hourly cost of labor for different roles or resources. A project rate is a fixed rate that is applied to all resources assigned to a project, regardless of their roles or individual rates. Both of these can be used to calculate the planned cost of a resource plan by multiplying the hours allocated to each resource by the corresponding rate. The other options are incorrect because:

A . Demand rate: A demand rate is a rate that is applied to a demand, not a resource plan. It is used to estimate the cost of fulfilling a demand before it is converted into a project².

C . Default rate: A default rate is a rate that is applied to a resource when no other rate is specified. It is not a valid option for calculating the planned cost of a resource plan, as it is only used as a fallback option³.
