## SAP C\_CPI\_2506 Unparalleled Real Braindumps Pass Guaranteed Quiz

Actual4Cert offers a full refund guarantee according to terms and conditions if you are not satisfied with our C\_CPI\_2506 product. You can also get free SAP Dumps updates from Actual4Cert within up to 365 days of purchase. This is a great offer because it helps you prepare with the Latest C\_CPI\_2506 Dumps even in case of real SAP Certified Associate - Integration Developer (C\_CPI\_2506) exam changes.

## SAP Certified Associate - Integration Developer Sample Questions (Q51-Q56):

### NEW QUESTION # 51

Which combination of event-driven architecture (EDA) patterns is supported by SAP Event Mesh?

- A. Publish/Subscribe and Point-to-Point event-driven architecture patterns
- B. Choreography and Orchestration event-driven architecture patterns
- C. Request/Reply and Message Queuing event-driven architecture patterns
- D. Publish/Subscribe and Event Sourcing event-driven architecture patterns

**Answer: A**

Explanation:

SAP Event Mesh supports:

Publish/Subscribe # A single event published by a producer can be consumed by multiple subscribers.

Point-to-Point (Queue-based) # Messages sent directly from producer to consumer via queues.

Other options are incorrect:

Event Sourcing is not part of SAP Event Mesh capabilities.  
Request/Reply is synchronous, not the main EDA pattern.  
Choreography/Orchestration are higher-level process design concepts, not the eventing patterns.

#### NEW QUESTION # 52

You have created an API provider of the type Internet. What http response code indicates success?

- A. 0
- B. 1
- **C. 2**
- D. 3

**Answer: C**

Explanation:

The http response code that indicates success is 200. The 200 response code means that the request was successfully processed and the response contains the expected data. Other response codes in the 2xx range also indicate success, but with some variations. For example, 201 means that a resource was created, 202 means that a request was accepted but not completed yet, and 204 means that there is no content in the response. #### NEW QUESTION # 53

You configured a content modifier as follows: Action Create. Name: ProductID. Source Type: XPath. Source Value: //ProductID. Data Type: java lang string. After testing the content modifier, you receive an error message that contains the following fragment: java.lang.ClassNotFoundException java lang string. What caused the error message?

- **A. Incorrect data type**
- B. Incorrect source value
- C. Incorrect source type
- D. Incorrect name

**Answer: A**

Explanation:

The error message is caused by an incorrect data type in the content modifier configuration. The data type should be java.lang.String instead of java lang string. The data type defines the type of the value that will be stored in the header or property of the message. It should match one of the supported Java classes, such as java.lang.String, java.lang.Integer, java.lang.Boolean, and so on. If the data type is not valid, a java.lang.ClassNotFoundException will be thrown. Reference: Content Modifier | SAP Help Portal, Getting clear with SAP Integration Suite Content Modifier | SAP Blogs

#### NEW QUESTION # 54

You want to access individual entities of an HTTP call over XPath. What must you do if no namespace mapping exists?

- A. Remove the XML prolog.
- B. Convert the namespaces to JSON.
- C. Convert the namespaces to XML
- **D. Remove the namespaces.**

**Answer: D**

Explanation:

If no namespace mapping exists, you must remove the namespaces to access individual entities of an HTTP call over XPath. Namespaces are prefixes that identify the source or context of an XML element or attribute. If the namespaces are not mapped to a URI, they can cause errors or conflicts when using XPath expressions. Therefore, you must remove the namespaces before applying XPath queries.

### NEW QUESTION # 55

What is Representational State Transfer (REST)?

- A. A message protocol
- B. A description language for APIs
- C. An application protocol
- **D. An architectural style**

**Answer: D**

Explanation:

REST (Representational State Transfer) is:

An architectural style for designing networked applications.

Based on principles such as statelessness, resource orientation, uniform interface (HTTP methods: GET, POST, PUT, DELETE).

Used widely in SAP (OData is REST-based).

Other options:

Not a protocol (like HTTP), not a description language (like OpenAPI), and not limited to messaging.

Correct definition # Architectural style.

### NEW QUESTION # 56

.....

You are desired to know where to get free and valid resource for the study of C\_CPI\_2506 actual test. C\_CPI\_2506 free demo can give you some help. You can free download the C\_CPI\_2506 free pdf demo to have a try. The questions of the free demo are part of the SAP C\_CPI\_2506 Complete Exam Dumps. You can have a preview of the C\_CPI\_2506 practice pdf. If you think it is valid and useful, you can choose the complete one for further study. I think with the assist of C\_CPI\_2506 updated dumps, you will succeed with ease.
