### NEW QUESTION # 26

Which steps are executed when an SAP Business Data Cloud Intelligent Application is installed? Note: There are 2 correct answers to this question.

- A. Replication of data from the business applications to Foundation Services
- B. Creation of a dashboard for visualization
- C. Execution of a machine-learning algorithm
- D. Connection of SAP Datasphere with SAP Analytics Cloud

**Answer: A,D**

Explanation:

When an SAP Business Data Cloud (BDC) Intelligent Application is installed, two key foundational steps are executed to ensure its operational readiness. Firstly, there is the connection of SAP Datasphere with SAP Analytics Cloud (SAC). This establishes the vital link that allows the intelligent application's analytical models, which reside and are managed within SAP Datasphere, to be consumed and visualized in SAC. SAC serves as the front-end for analytical consumption, enabling users to interact with the insights generated by the intelligent application. Secondly, the installation process involves the replication of data from the business applications to Foundation Services. Foundation Services act as the initial landing zone for raw business data within the BDC architecture. This data replication ensures that the intelligent application has access to the necessary operational data from source systems to perform its functions, whether it involves data processing, enrichment, or feeding machine learning models. These steps are crucial for the intelligent application to ingest, process, and ultimately present valuable business insights.
