Salesforce Certified Advanced Administrator Sample Questions (Q20-Q25):

NEW QUESTION # 20
The administrator at AW Computing implements multi-factor authentication using the Salesforce Authenticator app downloaded on company-provided iPhones. A sales rep breaks their phone and needs to update an opportunity record.

How should the administrator grant access for the sales rep?

- A. Delegate multi-factor identification to the sales rep.
- B. Generate a temporary identity verification code for the rep.
- C. Instruct the sales rep to log in from the company's VPN.
- D. Add the sales rep's IP address to the trusted IP ranges.

Answer: B

Explanation:
To grant access for the sales rep who broke their phone and needs multi-factor authentication using Salesforce Authenticator app, the administrator can generate a temporary identity verification code for them. This code allows users who don't have their verification method available to log in securely without compromising their account security. NEW QUESTION # 21
An administrator is planning he release process for the year. The team will be using change sets to process deployment to production.
Which three best practices should be considered?

- A. Make sure to deploy all dependent components.
- B. Plan your deployments around the production and sandbox maintenance schedules.
- C. Use matching names for global publisher layouts and Outlook publisher layouts.
- D. Be sure to test only after business hours the data after deployment.
- E. Make sure change sets are limited to 10,000 files.

Answer: A,B,E

NEW QUESTION # 22
Cloud Kicks tracks project details in a custom Project object. Project Milestones are tracked in a second custom object, with a reference to the parent Project record. Users need to automatically create a standard set of related Project Milestones when a Project record is created.
What is the recommended automation solution?

- A. Before-save autolaunched flow
- B. After-save autolaunched flow
- C. Field Service flow
- D. Scheduled flow

Answer: B

Explanation:
Explanation
An after-save autolaunched flow is a type of flow that runs in the background when a record is saved and performs actions based on the record data or changes. An after-save autolaunched flow does not require user input or interaction and can be triggered by a record-triggered flow element or by an Apex trigger. In this case, you can create an after-save autolaunched flow that runs when a Project record is created and creates a standard set of related Project Milestone records based on predefined values or variables. NEW QUESTION # 23
Ursa Major Solar has a training sandbox with 160MB of test data that needs to be refreshed every other day.
Which two sandboxes should be used in this instance?
Choose 2 answers

- A. Full
- B. Partial

- C. Developer Pro
- D. Developer

Answer: B,C

Explanation:
To create a training sandbox with 160MB of test data that needs to be refreshed every other day, NTO should use either Partial or Developer Pro sandboxes. Partial sandboxes have a storage limit of 10GB and can be refreshed every 5 days. Developer Pro sandboxes have a storage limit of 1GB and can be refreshed every day.
Both sandboxes can include test data from production. References:
