

BCS CTFL4 Exam Score | CTFL4 Real Brain Dumps

DOWNLOAD the newest PrepPDF CTFL4 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1KioBC7jt6xKTCI34T1OtCGLJKG2zFhI>

Our CTFL4 study materials have enough confidence to provide the best CTFL4 exam torrent for your study to pass it. With many years work experience, we have fast reaction speed to market change and need. In this way, we have the latest CTFL4 guide torrent. You don't worry about that how to keep up with the market trend, just follow us. We can say that our CTFL4 Test Questions are the most suitable for examinee to pass the CTFL4 exam, you will never regret to buy it.

They put all their efforts to maintain the top standard of BCS CTFL4 exam questions all the time. So you rest assured that with BCS CTFL4 exam dumps you will get everything thing that is mandatory to learn, prepare and pass the difficult BCS CTFL4 Exam with good scores. Take the best decision of your career and just enroll in the BCS CTFL4 certification exam and start preparation with BCS CTFL4 practice questions without wasting further time.

CTFL4 Real Brain Dumps | Downloadable CTFL4 PDF

Our product provides the demo thus you can have a full understanding of our CTFL4 prep torrent. You can visit the pages of the product and then know the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the CTFL4 test braindumps, the price of the product and the discount. There are also the introduction of the details and the guarantee of our CTFL4 prep torrent for you to read. You can also know how to contact us and what other client's evaluations about our CTFL4 test braindumps. The pages of our product also provide other information about our product and the exam.

BCS ISTQB Certified Tester Foundation Level CTFL 4.0 Sample Questions (Q24-Q29):

NEW QUESTION # 24

The following decision table is used to assist a doctor in determining the drug therapy to prescribe for a patient (aged 6 to 65 years) diagnosed with acute sinusitis. The table consists of three Boolean conditions and six actions

	1	2	3	4	5	6	7	8
Conditions								
Is the patient over 18 years old?	F	F	F	F	T	T	T	T
Is the patient allergic to Penicillin?	F	F	T	T	F	F	T	T
Is the patient taking anticoagulant therapy?	F	T	F	T	F	T	F	T
Actions								
Amoxicillin is the therapy of choice					X			
Levofloxacin is the therapy of choice			X				X	
Cefuroxime is the therapy of choice	X							
Necessary consultation with the hematologist		X		X		X		X
Full dosage recommended for 10 days					X		X	
Half of the full recommended dosage for 10 days	X		X					

Based only on the given information, which of the following statements is TRUE?

- A. Columns 1 and 3 can be merged into a single column
- B. Columns 2, 4, 6 and 8 can be merged into a single column
- C. Column 7 represents an impossible situation and thus can be deleted
- D. Columns 5 and 7 can be merged into a single column

Answer: A

Explanation:

Decision tables are used to model complex decision logic by considering different combinations of conditions and actions. Based on the given decision table for prescribing drug therapy:

Column 1 and Column 3 both result in the same actions (prescribing Amoxicillin).

These columns can be merged because the actions taken do not depend on whether the patient is taking anticoagulant therapy (both are 'T' for this condition).

Thus, combining these columns simplifies the decision table without losing any information.

NEW QUESTION # 25

Which statement is true regarding confirmation testing and regression testing?

- A. Confirmation testing aims to verify that a defect has been resolved and regression testing ensuring that existing functionality still works after a change.
- B. Testers' involvement is essential whilst running retesting and regression testing.
- C. Confirmation testing is an optional activity whilst regression testing is not negotiable.
- D. TESTER Involvement is essential whilst running retesting and regression testing.
- E. Confirmation testing confirms the quality of the test being run while regression testing ensures that the software still works after a change has been made.

Answer: A

Explanation:

Confirmation testing, also known as retesting, is conducted to verify that specific defects have been fixed. Regression testing, on the other hand, is performed to ensure that recent changes have not adversely affected existing features of the software. Both types of testing are crucial for maintaining the integrity and quality of the software after modifications.

NEW QUESTION # 26

Given the following User Story: "As an online customer, I would like to be able to cancel the purchase of an individual item from a shopping list so that it only displays the relevant items, in less than 1 second", which of the following can be considered as applicable acceptance test cases?

I. Click on my online shopping list, select the unwanted Item, delete the unwanted item, the unwanted Item is deleted from the

shopping list in less than 1 second.

ii. Click on my online shopping list, select all the items, delete all the items, the unwanted items are deleted from the shopping list in less than 1 second.

iii. Tap to the online shopping list and press enter, select the unwanted item, delete the unwanted item, the unwanted item is deleted from the shopping list in less than 1 second.

iv. Click on the checkout button, select the payment method, make payment, confirmation received of payment and shipping date.

v. Click on my shopping list, select the unwanted item, delete the unwanted item, the unwanted item is deleted from the shopping list. Select the correct answer:

- A. I, ii and v
- B. iv
- C. v
- **D. i and iii**

Answer: D

NEW QUESTION # 27

Which of the following work products cannot be examined by static analysis?

- **A. Test plans**
- B. Compiled code
- C. Formal models
- D. Source code

Answer: A

Explanation:

Static analysis is the process of examining the work products of a software development or testing activity without executing them. Static analysis can be applied to various types of work products, such as requirements, design, code, test cases, etc. However, test plans are not suitable for static analysis, because they are high-level documents that describe the test objectives, scope, strategy, resources, schedule, and risks of a testing project. Test plans are not executable or formalized in a way that static analysis tools can analyze them. Therefore, option A is the correct answer.

NEW QUESTION # 28

A program is used to control a manufacturing line (turn machines on and off, start and stop conveyer belts, add raw materials to the flow, etc.). Not all actions are possible at all times. For example, there are certain manufacturing stages that cannot be stopped - unless there is an emergency. A tester attempts to evaluate if all such cases (where a specific action is not allowed) are covered by the tests.

Which coverage metric will provide the needed information for this analysis?

- A. Code coverage
- B. Data flow coverage
- **C. Branch Coverage**
- D. Statement coverage

Answer: C

Explanation:

Branch coverage is a type of structural coverage metric that measures the percentage of branches or decision outcomes that are executed by the test cases. A branch is a point in the code where the control flow can take two or more alternative paths based on a condition. For example, an if-else statement is a branch that can execute either the if-block or the else-block depending on the evaluation of the condition. Branch coverage ensures that each branch is taken at least once by the test cases, and thus reveals the behavior of the software under different scenarios. Branch coverage is also known as decision coverage or all-edges coverage. Branch coverage is suitable for testing the cases where a specific action is not allowed, because it can verify that the test cases cover all the possible outcomes of the conditions that determine the action. For example, if the program has a condition that checks if the manufacturing stage can be stopped, then branch coverage can ensure that the test cases cover both the cases where the stage can be stopped and where it cannot be stopped. This way, branch coverage can help identify any missing or incorrect branches that may lead to undesired or unsafe actions.

The other options are not correct because they are not suitable for testing the cases where a specific action is not allowed. Code coverage is a general term that encompasses various types of coverage metrics, such as statement coverage, branch coverage, data flow coverage, etc. Code coverage does not specify which type of coverage metric is used for the analysis. Data flow coverage is a type of structural coverage metric that measures the percentage of data flow paths that are executed by the test cases. A data flow path is a sequence of statements that define, use, or kill a variable. Data flow coverage is useful for testing the correctness and completeness of the data manipulation in the software, but not for testing the conditions that determine the actions. Statement coverage is a type of structural coverage metric that measures the percentage of statements or lines of code that are executed by the test cases. Statement coverage ensures that each statement is executed at least once by the test cases, but it does not reveal the behavior of the software under different scenarios. Statement coverage is a weaker criterion than branch coverage, because it does not account for the branches or decision outcomes in the code. Reference = ISTQB Certified Tester Foundation Level (CTFL) v4.0 syllabus, Chapter 4: Test Techniques, Section 4.3: Structural Testing Techniques, Pages 51-54.

NEW QUESTION # 29

.....

BCS CTFL4 study material of "PrepPDF" is available in three different formats: PDF, desktop-based practice test software, and a browser-based practice CTFL4 exam questions. ISTQB Certified Tester Foundation Level CTFL 4.0 (CTFL4) practice tests are a great way to gauge your progress and identify weak areas for further study. Check out features of these formats.
