最新的 Foundation Level ISTQB-CTFL 免費考試真題 (Q218-Q223):

問題 #218

A minimum of 0 and a maximum of 40 points can be achieved in a Certified Tester Foundation examination. With a score of 26 points to 36 points inclusive, the exam is considered "passed", with 37 points or higher it is "passed with distinction" and with less than 26 points the examination is "not passed".

Which of the following sets of positive integers fully covers a 2-value boundary value analysis ? (No values from invalid equivalence classes should be specified).

- A. 25, 26, 27, 39, 40, 41
- **B. 0, 25, 26, 36, 37, 40**
- C. 0, 24, 25, 35, 36, 37, 40
- D. 0, 2, 25, 26, 27, 35, 36, 37

答案: B

問題 #219

Consider the following iteration planning tasks where a tester can provide value:

- * Break down user stories into tasks (particularly testing tasks)
- * Estimate test effort for all testing tasks
- * Identify and refine functional and non-functional aspects of the test object Which ONE of the following tasks should be ADDED to the above list?

- A. Writing testable user stories and acceptance criteria
- **B. Participating in the detailed risk analysis of user stories and determining their testability**
- C. Determining the test strategy
- D. Planning the testing for the release

答案: B

解題說明:

Comprehensive and Detailed In-Depth Explanation:

During iteration planning, testers provide input on risk analysis, testability, and the feasibility of test automation. Participating in risk analysis (B) helps identify areas needing more extensive testing.

* (A) is incorrect because the test strategy is usually set at a higher level (project or release level).

* (C) is incorrect as release planning is broader than iteration planning.

* (D) is incorrect since writing user stories is mainly the responsibility of the product owner, though testers contribute to defining acceptance criteria.

Risk-based test prioritization ensures testing efforts are aligned with business needs and software risks.

問題 #220

Which of the following statements about independent testing is WRONG?

- A. Independent testing is best suited for the system test level.
- B. A certain degree of independence makes the tester more effective at finding defects.
- **C. Independent testing is necessary because developers don't know any testing.**
- D. Independent test teams may find other types of defects than developers who are familiar with the system's structure.

答案: C

解題說明:

Independent testing is testing performed by a person or group that is independent of the development team.

Independent testing can have various degrees of independence, ranging from testers who are part of the same organization as developers to testers who are external contractors or consultants. Independent testing can have various benefits, such as reducing bias, increasing objectivity, improving quality, or providing different perspectives. Independent testing is not necessary because developers don't know any testing, as this is a wrong and disrespectful statement. Developers can perform various types of testing, such as unit testing, component testing, or integration testing. However, independent testing can complement developer testing by providing additional levels of verification and validation, such as system testing, acceptance testing, or non-functional testing. Verified

問題 #221

Which of the following is an INCORRECT statement about the benefit of traceability between the test basis and test work products?

- A. Traceability may help evaluate the extent of test coverage
- B. Traceability may make it harder to understand the impact of changes
- C. Traceability may allow testing to be auditable
- D. Traceability may be required by IT governance rules

答案： B

解題說明：

The statement "Traceability may make it harder to understand the impact of changes" is incorrect.

Traceability in testing actually facilitates understanding the impact of changes by linking test cases to requirements. This linkage helps ensure that any changes in the requirements are adequately reflected and verified in the test cases, thus supporting effective management of changes and maintaining the integrity of the system or product being developed (ISTQB not-for-profit association) (ISTQB Main Web).

問題 #222

Which ONE of the following options is NOT a benefit of test automation?

- A. Prevention of simple human errors
- B. Eliminating completely the need for manual testing
- C. More objective assessment
- D. Reduced test execution times

答案： B

解題說明：

Comprehensive and Detailed In-Depth Explanation: Test automation improves efficiency and accuracy, but it does NOT eliminate manual testing (D).

* (A) is correct because automation speeds up execution.

* (B) is correct as automated tests produce consistent and unbiased results.

* (C) is correct because automation reduces human errors in repetitive tests.

However, manual testing remains essential for exploratory testing, usability testing, and complex test scenarios.
