ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q30-Q35):

NEW QUESTION # 30

A software development company invests heavily in tools to support the entire software development lifecycle, including testing. They have a tool that allows automated creation and installation of builds and subsequent execution of various types of automated tests. Which ONE of the following is a CORRECT statement about this type of test tool?

- A. It is an example of automated unit testing tool
- B. It is an example of DevOps related tools

- C. It is an example of collaboration tool
- D. It is an example of test implementation tool

Answer: D

NEW QUESTION # 31

Which of the following is an example of the absence-of-errors fallacy?

- A. A small number of modules contains the most defects
- B. Since testing found very few defects, the system certainly will be successful
- C. Repeating the same test cases will continue to find new defects, even after dozens of executions
- D. Other than trivial cases, it is not feasible to test all combinations of inputs and preconditions

Answer: B

Explanation:

The absence-of-errors fallacy, as explained in the ISTQB syllabus, is the erroneous belief that having fewer defects found in testing equates to a system being more successful upon release. This misconception can lead stakeholders to undervalue thorough testing. Answer C illustrates this fallacy perfectly: assuming that because few defects were found, the system will be successful, neglects the many other factors that contribute to system success, including user satisfaction and fit-for-purpose.

ISTQB Certified Tester Foundation Level Syllabus v4.0, Section 1.1.5 "Absence-of-errors fallacy".

NEW QUESTION # 32

The following incident report that was generated during test of a web application.

What would you suggest as the most important report improvement?

Defect detected date: 15.8.2010

Defect detected by: Joe Smith

Test level System test

Test case: Area 5/TC 98

Build version: 2011-16.2

Defect description After having filled out all required fields in screen 1, t click ENTER to continue to screen 2 Nothing happens, no system response at all.

- A. Add the time stamp when the incident happened
- B. Add an impact analysis
- C. Add information about which developer should fix the bug
- D. Add information about which web browser was used

Answer: D

Explanation:

The most important report improvement for the given incident report would be to add information about which web browser was used when the defect was detected. This information is relevant for reproducing and debugging the defect, as different web browsers may have different behaviors or compatibility issues with the web application. The other options are less important or irrelevant for the incident report. The developer who should fix the bug can be assigned by the project manager or the defect tracking system, not by the tester who reports the defect. The time stamp when the incident happened is not very useful, as it does not indicate the cause or the frequency of the defect. The impact analysis is not part of the incident report, but rather of the risk assessment or prioritization process. NEW QUESTION # 33

Given the following state model of sales order software:

SEE ATTACHMENT

Which of the following sequences of transitions provides the highest level of transition coverage for the model (assuming you can start in any state)?

- A. IN PRODUCTION -> SHIPPED -> INVOICED -> CANCELLED -> PLACED -> IN PRODUCTION
- B. IN PRODUCTION -> CANCELLED -> PLACED -> IN PRODUCTION -> CANCELLED -> PLACED

- C. PLACED -> IN PRODUCTION -> SHIPPED -> CANCELLED -> PLACED
- D. PLACED -> CANCELLED -> PLACED -> CANCELLED -> PLACED -> IN PRODUCTION -> CANCELLED

Answer: A

Explanation:

To achieve the highest level of transition coverage, one must consider all the possible transitions between the states in the given state model of the sales order software. The transitions in the sequence provided in Option B - "IN PRODUCTION -> SHIPPED -> INVOICED -> CANCELLED -> PLACED -> IN PRODUCTION" cover all the states and transitions effectively. This covers the transitions from IN PRODUCTION to SHIPPED, SHIPPED to INVOICED, INVOICED to CANCELLED, CANCELLED to PLACED, and PLACED to IN PRODUCTION, thereby maximizing the transition coverage. NEW QUESTION # 34

Which ONE of the following activities TYPICALLY belongs to the planning phase of the review process?

- **A. The purpose and scope of the review are defined, as well as the work product to be reviewed and the exit criteria.**
- B. A separate defect report is created for each identified defect so that corrective actions can be tracked.
- C. The reviewers analyze and discuss the anomalies found during the review in a joint meeting.
- D. Each reviewer conducts an individual review to identify anomalies, recommendations, and questions.

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The planning phase of the review process (C) includes defining the review's purpose, scope, and exit criteria to ensure alignment. Option A is part of the defect management phase, B happens during individual preparation, and D takes place in the review meeting.

NEW QUESTION # 35

.....

The ISTQB-CTFL Exam Questions is of the highest quality, and it enables participants to pass the ISTQB-CTFL exam on their first try.
