The software version of our Plat-Dev-210 study engine is designed to simulate a real exam situation. You can install it to as many computers as you need as long as the computer is in Windows system. With our software of Plat-Dev-210 guide exam, you can practice and test yourself just like you are in a real exam. The results of your test will be analyzed and a statistics will be presented to you. So you can see how you have done and know which kinds of questions of the Plat-Dev-210 Exam are to be learned more.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.
Topic 2	<ul style="list-style-type: none">• Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
Topic 3	<ul style="list-style-type: none">• Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.

Topic 4	<ul style="list-style-type: none"> • Omniscritps: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.
Topic 5	<ul style="list-style-type: none"> • Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.

The Best Plat-Dev-210 Latest Exam Price & Reliable Valid Real Plat-Dev-210 Exam & Complete Latest Plat-Dev-210 Test Blueprint

Having been handling in this line for more than ten years, we can assure you that our Plat-Dev-210 study questions are of best quality and reasonable prices for your information. We offer free demos of the latest version covering all details of our Plat-Dev-210 Exam Braindumps available at present as representatives. So Plat-Dev-210 practice materials come within the scope of our business activities. Choose our Plat-Dev-210 learning guide, you won't regret!

Salesforce Certified Omnistudio Developer Sample Questions (Q101-Q106):

NEW QUESTION # 101

A developer creates an OmniScript to update billing information. After analyzing the different types of customer interactions that occur at the company, the developer determines updating billing information should be included in the majority of customer interactions, which are represented by more than 20 different FlexCards.

What is the most efficient way for the developer to configure the action that invokes the OmniScript?

- A. As an OmniStudio Action
- B. As a Lightning Action
- C. As a Custom Action
- **D. As an OS Action**

Answer: D

Explanation:

An OS Action is the most efficient way to configure the action that invokes the OmniScript, as it allows the developer to reuse the same OmniScript across multiple FlexCards without creating separate actions for each one. A Custom Action is used to invoke a custom Apex class or Lightning web component. An OmniStudio Action is used to invoke an Integration Procedure or a Calculation Procedure. A Lightning Action is used to invoke a Lightning component or a Visualforce page.

NEW QUESTION # 102

- A.
- **B.**

Answer: B

Explanation:

The correct answer is Option B, which shows a FlexCard with a header, a body, and a footer. The header contains the title and the icon of the FlexCard. The body contains a Data table element that displays the records from the parent FlexCard. The footer contains a navigation Action that invokes an OmniScript.

Option A is incorrect because it shows a FlexCard with only a header and a body, and no footer.

NEW QUESTION # 103

Which calculation procedure version in the list would execute on 2/15/2020 at 12:00 PM?

- A. Version Number 1
- B. Version Number 2
- C. Version Number 3
- **D. Version Number 4**

Answer: D

Explanation:

the calculation procedure version that would execute on 2/15/2020 at 12:00 PM is the one that has the start date time and end date time that include that date and time, and also has the highest priority among the enabled versions. In this case, only version number 4 meets these criteria, as it has a start date time of 2/1/2020 12:00 AM, an end date time of 4/1/2020 12:00 AM, a priority of 1, and is enabled. The other versions either have a different start or end date time, a lower priority, or are not enabled.

NEW QUESTION # 104

A healthcare company wants to enable its subscribers to add, edit, or delete dependents related to their policy via their Community portal. The developer on the project decides to use an OmniScript.

How should the developer configure the OmniScript to provide this functionality?

- A. Use a Text Block element and a Remote Action element.
- B. Use an Edit Block element configured with SOQL statements.
- C. Use an Input Block element and a Data Mapper Post Action element.
- **D. Use an Edit Block element configured with Remote Actions.**

Answer: D

Explanation:

In OmniStudio, the Edit Block element is purpose-built for allowing users to dynamically add, edit, or delete rows of related data, such as dependents under a policy. To save these changes, Remote Actions (typically backed by Apex or API) are used to process each record operation (Create/Update/Delete).

* A. Use an Edit Block element configured with Remote Actions - Correct. This is the recommended and most scalable way to support CRUD operations in OmniScripts for collections (e.g., dependents).

The Edit Block provides UI-level support, while Remote Actions handle back-end interaction with Salesforce or external systems.

Incorrect Options:

* B. Text Block is for display purposes and cannot manage data input or backend actions.

* C. Input Block elements do not support row-level add/edit/delete functionality as Edit Blocks do.

* D. SOQL is a read-only query language and cannot be used to update or delete records directly within an OmniScript.

:

Salesforce OmniStudio Guide # OmniScript Edit Block Element

OmniStudio Best Practices # CRUD Operations in OmniScripts

NEW QUESTION # 105

A developer writes an OmniScript that includes a DataRaptor that updates the Account status based on information provided from the OmniScript. The information must be updated only if the Account record already exists. Otherwise, a new account must be created.

How should the developer accomplish this task?

- A. Populate the Lookup Object and Lookup Fields
- B. Check the Upsert Key checkbox on the Account Status field
- C. Check Overwrite Target for All Null Inputs checkbox on the Account Id field
- **D. Check the Upsert Key and Is Required for Upsert checkboxes on the Account Id field**

Answer: D

Explanation:

The Upsert Key checkbox indicates that the field is used as a key for upserting records. The Is Required for Upsert checkbox indicates that the field is mandatory for upserting records. The developer needs to check both checkboxes on the Account Id field to update the Account status only if the Account record already exists. Otherwise, a new account will be created.

NEW QUESTION # 106

.....

The Salesforce Plat-Dev-210 certification exam offers a great opportunity for professionals to demonstrate their expertise and knowledge level. In return, they can become competitive and updated with the latest technologies and trends. To do this they just need to enroll in Salesforce Plat-Dev-210 Certification Exam and have to put all efforts and resources to pass this challenging Plat-Dev-210 exam.
