Salesforce Arch-303 Reliable Test Pdf - Arch-303 Exam Overview

These Salesforce Arch-303 questions and Salesforce Certified B2C Commerce Architect Arch-303 practice test software that will aid in your preparation. All of these Salesforce Certified B2C Commerce Architect Arch-303 formats are developed by experts. And assist you in passing the Salesforce Certified B2C Commerce Architect Arch-303 Exam on the first try. Arch-303 practice exam software containing Salesforce Arch-303 practice tests for your practice and preparation.

Salesforce Certified B2C Commerce Architect Sample Questions (Q60-Q65):

NEW QUESTION # 60

A company manages its regional operations asseparate businesses. The regional sites (Site A and Site B) operate with:
* Separate realms
* Deferent code bates
* Different category navigation menus
* Frequent updates on category structure
The requirement from the business is to provide hreflang link tags on category pages pointing to the same category on the other regional site. Example MTML for one of these links as displayed on Site A is:
Which solution should the Architect choose while keeping performance in mind?

- A. Create a custom Business Manager module. Ask the business to maintain the hreflang link tags for each regional site in this Business Manager module.
- B. Create a new customattribute on the Category. Populate the attribute with the other entire site URLs corresponding to locales In JSON Format. Use the attribute to display the hreflang link tag.
- C. Create a new custom object type Populate the hreflang mapping for each category and locale in this custom object. Use the custom object to display the hreflang link tag.
- D. Create additional locales in al realms create a new custom attribute on the category that is localized. Populate the attribute with the other site URLs and use it to display the hreflang tag.

Answer: C

Explanation:
For a multi-regional setup with different realms and frequent updates, using a custom object to manage hreflang mappings offers flexibility and scalability. Custom objects can efficiently store URL mappings for each category across different locales, making it easier to manage and update as category structures change.
This method allows for centralized control over hreflang mappings and simplifies maintenance compared to other options which might involve more complex integrations or manual updates.

NEW QUESTION # 61
Northern Trail Outfitters (NTO) operate 200 physical stores. NTO has products that are available in some of the physical stores and not available in others. The closest physical store is determined based on customer s post zip code when they are shopping online. Only the products that are available in the customer's closest physical store should be presented to the customer to the search results.
What are the two feasible technical approaches to meet these requirements?
Choose 2 answers

- A. Create a separate site per physical store. Use post/zip code to redirect the customer to the relevant site.
  Show the products from the site navigation catalog.
- B. Create a separate shipping method per physical store. Use post/zip code to determine the applicable shipping method.
  Show only the products that are not excludedfrom the shipping method.
- C. Create a separate pricebook per physical store. Use post/zip code to activate this pricebook through a customer group.
  Show only the products with price by applying price refinement.
- D. Create a separate category per physical store use post/Tip code with a mapping to determine the relevant category. Show only the products from this category.

Answer: C,D

Explanation:
For Northern Trail Outfitters to ensure that only products available in a customer's closest physical store are shown:
* Option B is effective because it organizes inventory by store-specific categories, which can then be dynamically linked to a customer's location via their postal/zip code. This allows the system to filter search results based on the relevant category that corresponds to the closest store.
* Option D leverages separate pricebooks that are specific to each store, enabling product availability to be managed through price refinements. This method also uses the customer's zip code to activate the appropriate pricebook, ensuring that only products priced (and thus available) in the nearest store are displayed.
Both methods are scalable and integrate seamlessly with the existing infrastructure of the Salesforce B2C Commerce platform.

NEW QUESTION # 62
During implementation, the team found that there is a notification controller exposed for an external service that marks the order as paid when notification is received. The notification URL is sent to the service together with the payment request and contains only the

URL with orderlD as the parameter.
What should the Architect recommend to the team in order to prevent the unauthorized usage of the controller to mark the orders as paid?

- A. Add an order token in the callback URL and match the token against the one stored on the order.
- B. Add a customer number in the callback URL and match the customer number against the one stored on the order.
- C. Add a session attribute and validate it on the callback.
- D. Add HTTPS restriction to the controller start node.

Answer: A

Explanation:
To enhance the security of the notification controller exposed for marking orders as paid, the recommended approach is to add an order-specific token to the callback URL (Answer C). This token should be verified against a stored value on the order to ensure the authenticity and integrity of the payment notification. This method prevents unauthorized use of the controller, as only callbacks containing the correct, order-specific token would be allowed to mark orders as paid. This strategy is essential in maintaining secure and reliable transaction processes within Salesforce B2C Commerce.

NEW QUESTION # 63
The Client plans to deploy a new payment provider and Order Management System on its existing B2C Commerce website. They have asked an Architect to advise which environment it should use to conduct load testing of its new integrations.
Which environment should be used as the ideal environment for this kind of load test?

- A. The Development Instance of a rental Realm.
- B. The Development Instance of the existing Realm.
- C. The Production instance of the existing Realm.
- D. The Production Instance of a rental Realm.

Answer: B

Explanation:
For conducting load testing of new integrations with a payment provider and Order Management System, it is recommended to use the Development Instance of the existing Realm (Option B). This approach ensures that any issues found during testing do not affect the live production environment, while still allowing tests to be conducted in an environment that mirrors the production setup as closely as possible. This minimizes the risk of disruptive downtime or customer-facing errors when the integration goes live.

NEW QUESTION # 64
a clientuses an external marketing toot to manage promotions and coupons for its multiple brands. They currently have only one brand on B2C Commerce and thev get Import-ready feeds created by this tool on en SFTP location.
The marketing team completes the data preparation by the end of the work day.
How should the Architect handle this import?

- A. Create a Job and define three steps: one standard step to download files from sftp end two steps that use Execute Script Module to import the promotion end coupons.
- B. Create a job and define three steps: one custom step to download the files from SFTP, and two standard steps to import the promotion and coupons.
- C. Create a Job and define three custom steps: download the files from SFTP, import promotions, import coupons
- D. Create a Job and define three steps: one step uses ExecuteScriptModule to download the files from SFTP, end two standard steps to Import the promotion end coupons.

Answer: B

Explanation:
To handle the import of promotion and coupon data from an SFTP location, the best approach is to create a job consisting of three steps as described in option C. The first step involves a custom script to download the files from the SFTP server-this is necessary because file retrieval from external servers typically requires specific connectivity and security configurations that are best handled in a custom-coded step. The subsequent two steps would utilize standard Salesforce B2C Commerce job steps to import the downloaded promotion and coupon data into the platform. This method ensures that the data flow is streamlined, from retrieval through to integration into the Commerce platform.

NEW QUESTION # 65

......

The Arch-303 desktop practice exam software and Arch-303 web-based practice test is very beneficial for the applicants in their preparation because these Salesforce Arch-303 practice exam provides them with the Salesforce Arch-303 Actual Test environment. ITexamReview offers Salesforce Arch-303 practice tests that are customizable. It means takers can change durations and questions as per their learning needs.
